Cross-posted to: rec.radio.amateur.misc,rec.radio.shortwave,rec.radio.info,rec.radio.scanner

This is a periodic reminder that the Boston Amateur Radio Club maintains an FTP area on world.std.com (192.74.137.5) in pub/hamradio.

This area is accessible via: anonymous ftp, gopher, and World Wide Web (and possibly other methods I'm not yet aware of). World is not *fsp*-able yet (I asked them).

Via Gopher, the easiest path to the area is by selecting the following from World's main menu:

18. Membership and Professional Associations

3. Boston Amateur Radio Club

And go from there...

Please feel free to browse through the area.

If anyone has any questions about it, please do not hesitate to e-mail me.

Also, up-to-date copies of the files on the ARRL's information server (info@arrl.org) are available in the directory pub/hamradio/ARRL/Server-files.

All text files are uncompressed, so they are both retrievable and viewable via Gopher and World Wide Web. (If you have any troubles with any text file, please e-mail me).

Source code for programs is always welcome. It can permit people to use those programs on other computers with other operating systems.

Scott

Sometimes I wonder just how PC Magazine manages to survive. This is an
over-simplification. _Some_ DSP-based products keep their software in
RAM or EEPROM. Many use EPROM, and some use mask-programmed ROM.

If they recommend using the word "callsign", I'd use it. There is no guarantee cs.buffalo.edu and callsign.cs.buffalo.edu will be the same computer in the future. Likewise, there is no guarantee it will retain the IP address you list above.

In general, when there is a special alias created for a service, it's wise not to defeat the purpose of the alias by using an alternate name.

1588. FT530 dtmf decoding

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-16 04:28:51 UTC
From: mladair@mtu.edu
Message-ID: <2js7e3$pgq@pace1.cts>
Source record: 271040

Found this on the net quite a while back and havn't seen it
since, so I thought people might be interested.

Don't blame me if it doesn't work. I don't even own a 530.
(Wich I did tho!)

Matt Adair N8SHA
mladai@mtu.edu

DTMF Decoding

A nifty little "feature" that isn't mentioned in the manual.
Steps to follow:

1) tune to the freq you want to monitor and turn on the code squelch
2) press Function-Page(Code) to select a code memory
3) dial up to memory #7
4) watch the dtmf's scroll by as they are heard by the radio!

1589. UHF repeater antenna bug

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-16 05:00:00 UTC
From: Dave.Hockaday%f160.n151.z1@psybbs.durham.nc.us
Message-ID: <761466217.AA09706@psybbs.durham.nc.us>
Source record: 271041

To: ALL
Subj: REPEATER ANTENNA PROBLEMS...

I have a situation on a UHF repeater installation that has me
puzzled. I could certainly use any input that might be out there...
Here are the system specifics...Antenna: Anli A-1000 (looks like the
Diamond x-500 inside and out). We have one of these antennas down in
Wilson, NC on the 147,30+ repeater and it performs very nicely on VHF.
It was quite an improvement over a sick 4 bay dipole array that was
up....Feedline: 200 feet of Andrews Heliax 7/8". The feedline is
terminated with a UHF connector on the bottom, a jumper of RG-225
connects the lower end of the hardline to the duplexers. The upper end
of the heliax is terminated with a type N connector. Another short
jumper (about 2 feet long) of RG-225 connects the hardline to the
antenna. The antenna is mounted on top of a 150 foot tower.
At the duplexers, looking up through the first rg-225
jumper/hardline/jumper/antenna I see about 22 watts out with about 5
coming back(!!). This is measured with a URM-120 mil-spec directional
wattmeter...a Daiwa uhf swr meter sees about 2.5:1(!). Now, if I move
the URM-120 to the hardline input (immediately after the first jumper)
I see about 28 watts out with 3 coming back and about 1.7:1 on the
Daiwa. I climbed the tower, terminated the hardline at the top with a
50 ohm dummy load that's good to 1 ghz, came back down, pumped 20 watts
on UHF directly into the hardline at the bottom. I measured about 11
watts making it out the top (the specs for at 450 mhz are about
2.8db/200 ft)...about right for the length...It seems to me that the
feedline impedance is more like either 38ish or 75ish ohms with that
type of response...The antenna measures flat at the feedpoint, but the
rest of the system is a bit nutty. With the reflected power at
the duplexers, I'm having a little desense.
Any ideas on the problem?? It really has me stumped...Oh yeah, if I
vary the length of the jumper at the top between the hardline and
antenna, the reflected power and swr at the bottom runs all over the
place!! Please help if you have any input. 73 de WB4IUY

JEFF M. GOLD (JMG@tntech.edu) wrote:
: Well I will say it flat out: John Ramsey is a liar.

Jeff, a psychologist will tell you that anyone who says a person is a "thing" rather than saying a person acted in a certain manner under certain circumstances, has at least abandoned objectivity and at worst, abandoned rationality. I think I've seen these exact words before. Do you have this file stored on your disk drive somewhere?

: I purchased one of the original 2 meter transceiver kits.

I did, also. For those who don't know, we are talking about the earlier FTR-146, Ramsey's first 2m transceiver, which they stopped shipping *two years ago*. I don't know why Jeff keeps beating a dead horse. My good friend, Don, KE6AJH, still uses that FTR-146 and it works great. The present FX-146 incorporates some of my suggestions for improving the FTR-146. But my approach was not, "you idiots don't know your ass from..."

: It didn't work correctly when I finished.

Mine didn't either... kits rarely do. I never did get the controlled-carrier modulation working right on my HeathKit DX-40 and Heath was completely unsympathic and unresponsive... and I learn more when the kit doesn't work.

: I called tech support.

I wrote a letter explaining in objective terms what the problem was. I got an immediate helpful response from Ramsey's technical support group.

: At the time there were long discussions about MANY people exeperiencing
: the same difficulties I had.

I encountered every one of the difficulties that you did and Ramsey (the company) bent over backwards to help me solve them. That's where the idea of EPROMs for frequency control came from. The offset is done in the EPROMs and the offset oscillators are not used.

: ...having to stretch some of the coils ...to get power out of the TX.

Jeff, if you don't have a variable cap, how else are you supposed to adjust a tuned circuit? I have been stretching and squeezing coils for 40 years. Air wound inductors are variable inductors, you know.

: ... don't know where that came from..
: Jeff, AC4HF

I'll bet a lot of readers of your posting know where it came from. Seems like a self-evident primary to the most casual gentleman observer. If

you called a Texan a liar, I would worry about your health.

John Ramsey and I have never met in person. We have exchanged letters and e-mail and I perceive him to be a friendly, helpful, and assertive businessman who is trying to make a living at his hobby. I personally learned a lot from the FTR and FX transceivers and own four of them. I've tuned up a dozen others and the owners are happy with them. I put an 80C51 in mine and now have all the features that a Japanese transceiver has... encoder tuning, digital display, selectable offset, selectable PL, 16 memories, IBM-PC control, etc... all for less than $200. Thanks, John, you have at least one satisfied and grateful customer.

>or something.

The depth of my "mental FIFO" seems to be related more to time than to the number of state changes. That is, the faster the CW, the further behind I can recollect, or "play back", in my head. I can notice improvements in this ability after merely finding some 35 wpm folks on 40 meters and listening to them while I do other things. It is your subconscious mind which must keep the FIFO full, while your conscious mind pieces the words together.

Boy I hope the folks in sci.cognitive or whatever don't read this thread! ObDisclaimer: This is my own personal observation about what my own brain seems to do.

>...my natural text reading speed has been around 1000 WPM since first

NOTE: The Effective Sunspot Number for 14 FEB 94 was 38.1.
The Full Kp Indices for 14 FEB 94 are: 4+ 4o 4o 3o 3o 5+ 4- 4+
The 3-Hr Ap Indices for 14 FEB 94 are: 34 30 29 16 16 55 23 31
Greater than 2 MeV Electron Fluence for 15 FEB is: 8.8E+08

SYNOPSIS OF ACT

Solar activity was low. Region 7671 (N10E52) produced a
C1/SF at 15/0757Z.

Solar activity forecast: solar activity is expected to be
low. Region 7670 (N11E38) and Region 7671 have slight M-class
flare potential.

The geomagnetic field has been at unsettled to active
levels at mid-latitudes for the past 24 hours. Some high
latitude stations reported severe storm conditions for the

period 15/1200-1500Z. Energetic electron fluxes have been at elevated levels since 07 Feb. One historic note regarding the past ten days. A-Fredericksburg values have exceeded 20 since 05 Feb 94. This has only occurred two other times since 1957 (beginning 27 Mar 1984 and 04 Jun 91).

Geophysical activity forecast: the geomagnetic field is expected to be unsettled. A coronal hole may bring a return to storm conditions on day three.

Event probabilities 16 feb-18 feb

Class M 05/05/05
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 16 feb-18 feb

A. Middle Latitudes
Active 25/30/30
Minor Storm 15/25/25
Major-Severe Storm 05/01/01

B. High Latitudes
Active 25/30/30
Minor Storm 15/25/25
Major-Severe Storm 05/05/05

HF propagation conditions continue to show signs of improvements, particularly over the low and middle latitude regions. However, high and polar latitudes are still experiencing poor to occasionally very poor propagation. Improvements should continue until about 17 February when effects from the second coronal hole noted above should herald a return to slightly more disturbed conditions.

1595. Facility assessment forms for ham radio operations

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-16 08:07:42 UTC
From: bihler@netcom.com
Message-ID: <bihlerCLB58v.Lwn@netcom.com>
Source record: 271047
Cross-posted to: misc.emerg-services,rec.radio.amateur.misc

I'm part of a newly formed ham/amateur radio emergency communications response group. One of the first things we've decided that we need/want to do is an assessment of our primary and secondary communication response points (and then work out from there).

Towards that goal we're trying to develop a form that will document the salient issues for us. For example:
. directions to the site
. possible problems: bridges/overpasses, flood plain
. resources available: power, antennas, radios...
. issues of concern: where and how to run cables, RF interference...

We have a pretty good start at what we think should be on the form, but we're wondering if anyone else has already done a similar type form and if they'd be open to sharing it with us?

Thanks much.

1598. ARRL Letter Feb 10 1994

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-16 12:29:12 UTC
From: marcbg@netcom.com
Message-ID: <$arll0210.1994@ampr.org>
Source record: 271050
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,sbay.hams

The ARRL Letter Vol. 13, No. 3 February 10, 1994
US, Russia give shuttle last-minute lift, agree to reciprocal, 3rd party privileges
Russian and American amateurs aboard last week's space shuttle were able to carry out some of their operating plans only thanks to a last-minute pact between their two countries, who finalized temporary third party and reciprocal operating agreements just after the shuttle lifted off.
On February 3 the US Department of State and the Russian Ministry of Post and Telecommunications each approved the temporary arrangements, which allowed cosmonaut Sergei Krikalev, U5MIR, to contact, on February 6, the House of Science and Technology for Youth, in Moscow.
The contact was retransmitted in Russia on HF and VHF, according to the ARRL SAREX Working Group.
After the two countries approved the arrangements, it still was necessary to obtain a Special Temporary Authorization from the FCC (since operating from the shuttle is viewed the same as operating from US soil). The ARRL contacted the FCC's Personal Radio Branch, and the STA was granted on February 4.
Permanent reciprocal operating and third party agreements between the US and Russia have been in negotiations for several years.
Krikalev's school contact was the first by a cosmonaut from a US space shuttle. Russian coordinators for the event were Leo Labutin, UA3CR, and Valery Agabekov, UA6HZ. During the contact, Aleksandr Kaleri, U8MIR, spoke to Krikalev from the school, and several other cosmonauts were on hand. Six Russian students were able to ask questions of the shuttle astronauts.
In addition to schools contacted, the shuttle's robot packet station had logged nearly 2000 contacts as of February 7.
The Associated Press reported this story on Friday evening, February 4, noting that failure to obtain the agreements could have rendered illegal not only Krikalev's contact with the Moscow school but also an amateur-band contact between him and the Russian Mir space station.
The US continues to pursue permanent reciprocal operating and third party agreements with Russia and hopes to conclude them with a signing ceremony later this month in Washington, the State Department said in announcing the temporary shuttle agreements.
US astronauts aboard the shuttle are Charles Bolden, KE4IQB, and Ronald Sega, KC5ETH.
RF exposure plan wrong-headed, League says
The ARRL has told the FCC that a proposal to adopt new standards for exposure to radio frequency radiation should be terminated.

The League said that the proposal, which would change the Commission's guidelines to match those adopted by the American National Standards Institute (ANSI) and the Institute of Electrical and Electronic Engineers (IEEE) in 1992, was premature, and more properly should have been introduced as an FCC notice of inquiry.

The ARRL said that the ANSI-IEEE standards were not properly delineated and not a proper basis for evaluating communications facilities. Under the proposal, the new standards would replace less stringent standards adopted in 1982.

"The Commission's handling of this proceeding," the League said, "is not conducive to a fair determination of which RF exposure standard, if any, should replace the 1982 ANSI standard, on which most of the current communications systems in operation in the United States are based."

The League said that an FCC report and order in 1987 that concluded that amateur stations should be exempted from such RF exposure guidelines, because amateur stations operate only intermittently, and at low power levels, still applies. Only rarely, the League said, would amateur stations exceed even the proposed, more stringent 1992 ANSI-IEEE standard.

According to the ARRL, the FCC's notice of proposed rule making has five main shortcomings:

* It doesn't actually propose rule changes, or suggest anything on which to base substantive comments;
* It asks for comments not on the 1992 RF exposure guidelines themselves but rather on how to implement them;
* It suggests that the Commission has not decided to adopt the 1992 ANSI standard, yet offers no other standard as an alternative;
* It discusses a standard -- the 1992 ANSI-IEEE standard -- that is not readily available to the public for review;
* It addresses a subject that is, according to the Commission itself, beyond the Commission's expertise to deal with.

The League said that the FCC's proceeding should be terminated in favor of more study, by a more appropriate government agency, such as the Environmental Protection Agency, or else by an FCC notice of inquiry. The Commission's NPRM is, the League said, actually "in the nature of" a notice of inquiry.

Based on the 1978 National Environmental Policy Act, which granted exclusions to some "routine" environmental processing, the Commission in 1987 said the following:

"Regarding amateur radio facilities, no specific evidence has been submitted that these facilities present a significant risk to the public that would warrant routine environmental evaluation. While hypothetically, RF radiation limits could be exceeded in a few instances, such situations apparently seldom occur in actual operation.

"Furthermore, because amateur stations are not individually licensed by frequency, modulation, power output, or location, it would not be administratively feasible to evaluate amateur applications for this environmental factor.

"Consequently, we find that amateur radio operators, at the time of

licensing, should not be required to routinely submit environmental information concerning exposure to RF radiation. Nevertheless, as an added precaution, we agree with [the League] that operator education would help to assure compliance with ANSI guidelines. In that connection, RF radiation safety questions are being incorporated into amateur examination study guides."

The League said that even before that exemption was granted, it had taken an aggressive approach toward education of amateurs about RF exposure.

Finally, the League said that if the FCC does decide to adopt a standard to replace the 1982 standard, it should not be the 1992 ANSI-IEEE standard, because it is "arbitrary on its face," and that some of the 1992 standards would be practically impossible to assess for either commercial or amateur facilities.

The League said that most amateur installations use antennas from 40 to 100 feet above ground, producing, according to the Commission's own measurements, minimal energy at ground level.

The possible exceptions, the League said, are where amateurs are forced to use indoor antennas because of restrictive land-use covenants that prevent outdoor antennas.

Many of the League's arguments to the FCC proposal paralleled those made last month at a hearing in New Jersey concerning a proposal to register and tax RF sources. In both instances, the League said that the infinite variety of amateur installations, and their ability to change configuration with something as simple as rotating a directional antenna, made "routine environmental processing" of amateurs nonsensical.

This FCC proposal, in ET Docket 93-62, was made in the spring of 1993, and its comment deadline has been extended several times, most recently to January 25, 1994, based on a request by CBS Inc. The reply comment deadline is February 24, 1994.

Ga. bill would outlaw restrictive covenants

A bill introduced in the Georgia legislature that would eliminate the effect of restrictive property covenants on amateurs is believed to be the first of its kind, according to ARRL Georgia Section Manager Jim Altman, N4UCK.

The bill, H.B. 1134, would prevent all new and renewed covenants from regulating, controlling, or restricting antennas owned and operated by licensed amateurs in the state.

Altman said that, in Georgia, all restrictive covenants have a life of 20 years, but can be renewed. This law, in banning new and renewed covenants, would leave existing covenants in place until their natural expiration, and prevent new ones. Over the next 20 years, all existing covenants would disappear.

The bill was initially referred to the State Bar committee on real property law, which gave the measure a "do pass" recommendation.

The bill mentions that Amateur Radio is federally created and protected, in part to provide emergency communication; that local zoning laws are partially preempted by an FCC declaration; that local zoning authorities do have the power to ensure the safety and "appropriateness" of antenna installations: and that restrictive covenants on antennas are

a "serious frustration" of amateurs' role in emergency communication.
The new bill would add the following subsection to Georgia law on covenants:
No covenant shall control, regulate, or restrict the installation of antennas within the subdivision by federally licensed amateur radio operators.
Amateurs in Georgia are urged to contact their state legislators and ask for their support of H.B. 1134. For more information, contact Altman or the Regulatory Information Branch at ARRL Headquarters.
VANITY CALL SIGN EXTENSION SOUGHT
The ARRL has requested an extension of the comment deadline on an FCC proposal to establish a "vanity" call sign system.
The FCC's Notice of Proposed Rule Making, in PR Docket 93-305, was released December 29, 1993, with a comment deadline of March 7, 1994.
The League immediately published the NPRM, in its entirety, in February 1994 QST, asking members to make their views on the matter known to their directors.
In its request for an extension of time for comments, until April 21, 1994, the ARRL said that enabling amateurs to choose a call sign was a great opportunity and a "difficult administrative process for the Commission.
"The allocation of a scarce resource, such as preferred call signs, raises distinct issues of fairness," the League said.
"Of particular concern is the establishment of a system of priorities for applicants for special call signs," the League said.
The League also said that the March 7 comment deadline simply did not allow enough time for ARRL members to express their views on the proposal and for the ARRL board to then formulate a position, and that legislation pending in the Congress could affect the way by which the FCC could charge fees for call sign requests.
BRIEFS
* Beginning March 1 the FCC will accept only the new version of its Form 610, as explained in February and March QST "Exam Info."
The current ARRL-VEC newsletter, VE Express, includes a full-size version of the new Form 610, and the ARRL-VEC has sent bulk quantities of the new form to all of its 650-plus "field stocked" VE teams, recommending that they begin using the new form on February 12, to allow sufficient turnaround time.
Copies of the new 610 form are available for an SASE from ARRL Headquarters.
* Contest operators once again will have the chance to swap lies about their QSO rates at the 2nd Annual Dayton Contest Dinner. It's the Saturday evening of the HamVention, April 30, 1994, at 6:30 PM at the Stouffer Center Plaza Hotel. Cost is $25 per person and reservation deadline is April 10, 1994. Send check and SASE to North Coast Contesters Dayton Dinner, PO Box 59, New Bedford PA 16140.
* On January 15 Ian Suart, GM4AUP, was installed as the 60th president of the Radio Society of Great Britain, succeeding Peter Chadwick, G3RZP. The new RSGB executive vice president is Clive Trotman,

GW4YKL. The RSGB said that "although the EVP frequently becomes president for the following year, this is not decided until the autumn."
* On January 26 the FCC granted the ARRL-VEC an extension of time to provide financial information concerning reimbursement arrangements for volunteer examiners. Last fall the FCC asked all VECs to provide such information for 1993, with a deadline of the end of January.
The ARRL said that its auditing firm will not complete its work on the League's 1993 finances until sometime in March, and the ARRL wished to wait until the audit is complete.
The League said it assumed that the other VECs would be given the same accommodation.
The FCC extended the deadline to March 31, 1994.
* Russia has reserved new call sign blocks as follows: R1MVA-R1MVZ for Malyj Vysotskij Island; R1FJA-R1FJZ for Franz Josef Land; and R1ANA-R1ANZ for Antarctica. These replace the 4J/4K call signs previously used, which are no longer available to Russia. The new call signs may not immediately be put into use.
* Here's a list of countries who joined the International Telecommunication Union in 1993: Czech Republic; Georgia; Slovakia; Kazakhstan; Micronesia; The Former Yugoslav Republic of Macedonia; Turkmenistan; Eritrea; Andorra. The ITU now has 182 members.
* The average cost of a hard cover technological book is now $48.83, according to Publisher's Weekly. The cost of the ARRL Handbook? -- $25. The Handbook has sold more than six million copies since Ed Handy, W1BDI, wrote the first one in 1926.
* The commander for space shuttle and SAREX flight STS67 in early 1995 will be Steve Oswald, KB5TSR. He will join SAREX veteran Payload Specialist Ron Parise, WA4SIR.
* The FCC has tallied some numbers on the Volunteer Examiner system since its 1984 debut, through late 1993: number of VE sessions, 56,485; number of people attending: 640,453; number of examination elements administered: 1,052,269.
* In the days following the January 17 earthquake near Los Angeles, amateurs were active in support of public service agencies and the Red Cross through both the Radio Amateur Civil Emergency Service (RACES) and the Amateur Radio Emergency Service (ARES), according to ARRL Los Angeles Section Manager Phineas J. Icenbice Jr, W6BF. If you have photos and/or stories about amateurs in action following the quake, please send them to Rick Palm, K1CE, at HQ.
* A call for papers has been issued for the 13th ARRL Digital Communications Conference, with a deadline of June 20, 1994. The conference will be held August 19 to 21 in Bloomington, Minnesota, and its theme is "Digital Communications -- Amateur Radio of Today&#65533; and the Future." Submit papers to Maty Weinberg at ARRL HQ.
* Broadcast professionals are invited to visit the ARRL Amateur Radio booth at the annual convention of the National Association of Broadcasters, March 21 to 24 in Las Vegas. The League will be in Booth 2703.
* New amateur satellite Korean Oscar 25 (KO-25) became available for use on February 1. The satellite, launched last fall and originally

designated KITSAT-B, has been under test since then. "We hope you enjoy our new star in space," said Hyungshin Kim, a staff member of the satellite's sponsor, the Korean Advanced Institute of Science and Technology. More information on KO-25 was in October 1993 QST, page 98.
* Tom Hogerty, KC1J, has been named Special Projects Manager at ARRL Headquarters. Building on his success in the clearance of the DXCC backlog last year during his tenure as DXCC manager, Tom's first project will be to investigate how services to members are rendered and how they can be improved..
The new DXCC Manager is Bill Kennamer, K5FUV, who joined the staff in June 1992. Bill also conducts the QST "How's DX?" column.
10 years ago in The ARRL Letter
The FCC clarified new rules under which Novice examinations were given regarding who was eligible to administer those exams. The FCC opened 144.5 to 145.5 MHz to RACES operations during declared emergencies, a move favored by the League because it would allow ARES operators to participate in RACES communications with their existing 2meter equipment. Two years after their debut, cordless telephones were assigned 10 duplex channels at 46 and 49 MHz while the FCC sought "a permanent home for these devices." Early cordless phones operated near 160 meters, causing headaches for their users and Top Band operators alike.
2 meters a life saver
Amateur Radio may have saved a life when Diana Carlson, KC1SP, used a local repeater to report an apparent suicide attempt to police.
Carlson, of Hudson, New Hampshire, was on her way to work at GenRad in Concord, Massachusetts, the morning of January 10, when she and another motorist observed a man climbing the railing of the Merrimack Bridge, which leads into the city. The man's auto was parked directly in front of Carlson.
While the other motorist talked to the man, Carlson first tried a call on 146.52, which she knew was sometimes monitored by the Westford, Massachusetts, police, then switched to the 147.120 repeater in Billerica. Larry Garneau, N1QEZ, who was mobile, responded and passed the message to his wife, Virginia Garneau, N1QFA, who telephoned police.
An officer of the Tyngsboro Police arrived in time to pull the 27-year-old man from the railing of the bridge.
"The policeman jumped out and hurriedly ran to the man, grabbed his arm and pulled him back onto the bridge," Carlson said. "My heart is in my throat&#65533; and then it's over. All of this, from first call to the rescue, took less than five minutes."
Carlson's husband David is N1JYX, her son is KA1VWX, and her daughter is KA1VUA.
Shipping Shipping
The ARRL shipping department has moved to a new, offsite leased warehouse. The League's list of titles, including books and supplies such as maps and logbooks, has grown to more than 150 since the Headquarters building was expanded in 1978, and the weight finally became more than the present building could accommodate. "The Handbook alone weighs more than five pounds," Circulation Manager Debra Jahnke said, "and we store

and ultimately ship more than 20,000 of them a year."
The new warehouse, about half a mile from HQ, has 9800 square feet, compared to 6200 formerly devoted to shipping and storage at HQ (and the new warehouse is on the first floor of its building!). "We expect much more efficient inventory control," Jahnke said. "We used to have to store books at not only a rented off-site facility in Connecticut but also at an R. R. Donnelley warehouse in Indiana."
The ARRL shipping department moves out more than 500,000 pounds of publications a year.

I agree with that, however if you wish to prove your speed in any test or
competition then you must transcribe in some way. It may be typwriter or
cursive or what have you but it must be done. I would not say it is
impossible, one guy at least has done it at soething like 78 wpm.

The Hamblaster has a 14 bit A/D. The add-on (I don't have the details
about this) may use a sigma-delta A/D. There may even be a super fast
sampler to do I.F. processing in the works.

A friend of mine would like to get his first Amateur Radio license in New Delhi, India. He requested the Amateur Radio Institute, Hyderabad, India to send him the information. He only received study materials but no exam schedule. Since Amateur Radio exams are held very infrequently and location varies every year. He would like to get in touch with Amateur Radio operators in New Delhi area. If someone on the net has an International Call Sign directory and can look up 3-4 names, addresses, phonenumbers and callsigns and email it to, will help my friend get one step closer to becoming a HAM.

Best Regards,
Kaushik Mehta (KE4IHB)

>Keith Poole K7MOA/3

Yes, the name of the club is the Synton Amateur Radio Club, and their
E-mail address is synton@uiuc.edu. They used to have (still do ?) Friday
night informal get togethers and work some HF, so that would be a good
time to stop by and see the club. Otherwise you'd need to organize a
sched with a club member to use the station.

Even the *thought* of receiving a QSL card with a nude picture of the average
ham on it is enough to offend me. I mean, seriously, folks. Leaf through
any QST of recent (or even ancient) vintage, look at the pictures of the
hams and imagine seeing them nude.

It's enough to make one take up needlepoint.

I have actually never copied a single character by hand yet. I am still very new to learning the code and every second has been spent on the computer. I received my first bad mark for handwriting in the second grade and was programming computers by the sixth. The writing has only gotten worse and the typing has moved to 70wpm since then.

Maybe I'll bring a notebook computer with me, accompanied by a little begging. :-)

ARLB019 Instant license opposed

Instant license opposed

In reply comments to the FCC on a proposal for instant operating authority for new amateur operators, PR Docket 93-267, the ARRL said that, ''almost without exception,'' groups and individuals who had responded to the proposal agreed with the League that the idea should be shelved in favor of electronic filing of license applications with the FCC.

The ARRL said that the mechanisms for such electronic filing of Form 610s ''cannot be more than a few months away at worst.''

The League said that the FCC plan would invite abuse because, among other reasons, ''The Commission itself suffers an inability to stem the tide of unlicensed operators in any radio service, because of limited enforcement resources.''

In response to a counter proposal by the W5YI-VEC, that the FCC's plan be modified to avoid abuse by having volunteer examiners assign temporary call signs from blocks allocated to them by the FCC, the League said this would be an unbearable burden and responsibility on the VEs.

The League said that, at any rate, the Communications Act gives no basis for the FCC to delegate call sign assignment authority, including determining a licensee's basic qualifications, which VEs would have no way of doing.

The League once again asked that the proceeding be terminated in favor of electronic filing as soon as feasible.

From ARRL Headquarters
Newington CT February 15, 1994
To all radio amateurs

SB QST ARL ARLB018
ARLB018 Study eyes 2300 MHz

Study eyes 2300 MHz

A preliminary plan from the National Telecommunications and Information Administration (NTIA) for reallocating government frequencies to non-government uses does not go far enough in responding to the will of Congress in protecting the needs of amateurs, the ARRL says.

Specifically affected would be the 2300 to 2450 MHz band. The preliminary plan would transfer some of that band to new non-government uses, which would not necessarily result in the loss of frequencies for amateurs, but amateur sharing could be more difficult than it now is with government users.

NTIA proposes to leave 2400 to 2402 and 2417 to 2450 MHz as now allocated, in part to permit continued amateur and, especially, amateur satellite operation. 2390 to 2400 and 2402 to 2417 MHz would be made available for new non-government services as early as August 1994, and 2300 to 2310 MHz would be made available later, under the NTIA plan.

In 1990 the ARRL commented to the NTIA when a study of domestic telecommunications infrastructure was begun. At that time, the League said that Amateur Radio's role of education and public service depended on it not being taken for granted in its modest spectrum needs.

In late 1992 the NTIA issued a notice of inquiry asking spectrum users what their future needs would be, and the League responded with a list, including ''continued or upgraded access to 2300 MHz for both terrestrial and satellite uses.''

The plan is the proposed implementation of a reallocation of spectrum from government to non-government use mandated by Congress last year.

A public comment period on the plan runs until May 1994.

Ofcourse, I can't speak for everyone, but people who understand
that being Nude does not in and of itself mean SEX are those that
most likely understand the nudist philosophy.

If we (men or women) are over forty, we are very fortunate if Isaac
Newton (gravity) hasn't taken over the tummy.

The reason kids are so cazy about nudism or at least photos is that
in their entire life they have been taught a kind of false modesy.
" My body is dirty" or "Somebody will criticize my body if I'm nude".

I guess in american society, which will not allow nudism on TV or even
the press, why should I be surprised if most licensed hams equate nude
bodies with sex and if you don't have the body of a greek God, for
God's sake keep your clothes on.

In Europe, general nudism is better acceppted and everyone is NOT
expected to have the body of a greek God.

In many ways American's have a very juvenile and puritanical view
of our birthday suit.

I say, if you want to take it off... well... why not?

I don't think that anyone would be sent a QSL with nude people depicted on
it unless they specifically wished to receive it. Whatever else you may
think, nudists and naturists generally respect others' desire to avoid
seeing other nude people.

Having said that, however, you may wish to consider the fact that there
is nothing inherently shameful about the nude form. Many European countries
have already discovered this. The image of the U.S., to many who live in
these countries, is one of extreme puritanism when it comes to nudity.

Of course there are still countries who are not quite as tolerant, but they would not be sent any QSL's with nudity on them.

Thanks, Scott.

I think something that is getting missed here is the fact that the particular QSL card in question is commemorating something call Nude Recreation Week. The stations that would be mailing the QSL card will definitely, absolutely, plainly. (etc) inform the other station that the QSL card has a picture of nude people on it. The setting will most likely be families at the beach, a lake, river, or similiar setting. It will *not* have anything "suggestive" or "lewd" or anything like that at all.

I don't want to ignite any debates about minors seeing the photo against their parent's wishes, but I think if the parents were to see the picture first, they would see that there isn't really anything to worry about on this one (I could be biased, of course). If they're old enough to ask about why these families aren't wearing any clothes, they're old enough to be told that some people choose not to wear clothes. Nudists/naturists know this is *not* an issue dealing with sexuality. Just as the one guy was implying, that is a matter to be handled within the family. (most nudists/naturists have no interest in interfering with family moral teachings -- just don't take away our nude beaches! :^)

Foreign hams will be informed what's up with the QSL card as well. It's true that some of the countries are more strict about what arrives in the mail, but the ham that is to receive the QSL card can determine for themselves if it's ok to receive it or not. They don't need anybody over here making that decision for them, thank you.

There isn't going to be any "suprises" in the mail. If you want to work one of the stations involved but don't want the nude QSL card, you'll be given the opportunity to say so. What's the big deal?

1615. FT-5100 vs. TM-732A - Recommendations?

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-16 17:03:24 UTC
From: peterson@physc1.byu.edu
Message-ID: <1994Feb16.100324.1373@physc1.byu.edu>
Source record: 271067
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

The Amateur Radio Club here at BYU is considering purchase of a new dual-band mobile system for general use as well as for emergency communications. We have looked at the range of radios available and it appears that the front runners are the Yaesu Ft-5100 and the Kenwood TM-732A (possibly the Kenwood TM-742A but the price is a little high). These radios all have the dual in-band receive and the cross-band repeat functions. The Yaesu also has the data jack (recently discussed as really nice for 9600 baud but useless for 1200 baud packet) that is appealing. However, the ads never talk about such things as intermod problems and quirks in operation. I would appreciate any feedback from anyone - both positive and negative - on these radios. Especially if you have used both of them. The RF environment is not extreme in this area but is getting worse so intermod and imaging problems are a concern.

Thanks for any help and information you can provide.

In a past article in the October 92 issue of 73 Magazine there was a reference to a company named "Sigma Design Associates" located at 22150 Berkeley Court, Los Altos CA. They had a kit which can be used with software to emulate a TNC at a very low cost.

Does anyone have phone or fax number of that company?
Or does anyone know if that company still exists or has moved???
I tried directory assistance without success...

I am told that in general, right handed operators use the right paddle for the dash while the left paddle is used for the dit. OK no problem so far.

Is there a rationale behind this convention?

If right handed people use their right hand to send code, why do they do this? It seems to me that it would be much more convenient to send code with the left hand so that the right hand is kept free to copy incoming code. This is the same logic that is used with baseball mitts. Is it that strictly right handed people can not do this?

: >better than that, since the quantization error is not constant;
: >sometimes the error is a small fraction of one LSB, sometimes it's up
: >to half an LSB. 8 bits will give you about 50 or so dB of SNR.

: Well I don't want to get into a big fight about comparing power spectra
: ratios to voltage ratios, I'll just say that it's the power spectrum that
: you hear. If you want to use voltage ratios instead, that's fine, but it
: means I'll have to raise the "broadcast quality" number to the 90-100 db
: range instead of the 45-50 db range.

Ummm... 50 dB is 50 dB whether expressed as a voltage ratio or a power
ratio. That's precisely why we use 20 as the coefficient when
calculating decibels on the basis of voltage ratios. That is:

power ratio = [(V1)^2 / R] / [(V2)^2 / R] = (V1/V2)^2

so, in dB,

dB = 10*log[(V1/V2)^2] = 2*10*log(V1/V2) (by properties of logarithms)
= 20*log(V1/V2)

To talk about a "power dB" as separate from a "voltage dB" is
meaningless, *unless* the two voltages you are comparing occur across
different impedances, which is not the case here. Your statement makes
no sense.

So, what's enough SNR, 50 dB or 100 dB? I suggest it's 50 dB. A compact disk gives you about 90 dB, and I'd hate to think we need better than CD quality on our voice links!

Of course, to realize the 50-dB SNR from the 8-bit system, the signals have to use all of the available signal range. If you use less, the SNR is reduced proportionally, as the signal is closer to the noise floor. That probably argues for something on the order of a 12-bit converter for "overhead." But with good ALC ahead of the A/D, 8 bits might be acceptable.

: >story short, we called *every* couple of months, but we never received
: >the promised radio. Finally, we just bought one (through a third
: >party). This is the unit we reviewed. In March of 1993, we contacted
:
: And one wonders why we don't advertise in QST, it's the attitude of
: history re-writers such as J.B. I was there, and the facts just ain't so.
: I'd rather talk on the phone! But I had to respond to such talk. You see, the
: ARRL couldn't get their kit to work! So we sent them an assembled unit.

No, as I said before, it *did* work, but didn't meet spectral purity requirements. *That's* why we requested an assembled unit--which also didn't meet the requirements and worked just like the one we built.

By the way, when I was doing the phone calling (eventually I turned it over the the Product Review editor), I spoke not to you, but to one of your employees. So I'm not sure how you can claim first-hand knowledge. Of course, it may be that your employee was telling me one thing and telling you something different.

: Yes it did not meet the FCC specs for spurious - missing by about a db or
: two (I'm at home and don't have notes handy). The ARRL missed the whole
: point of the kit which was to promote kit building, etc,etc. Now. I'm
: sure you are thinking, "but it didn't meet FCC!" True, but for a fascinating
: contrast, look at the GLOWING review of the MFJ regen receiver! Guess it
: doesn't spray RF.I do believe that MFJ has been quite a big QST advertiser, too.

As for the MFJ receiver, the RF amplifier in the front end probably keeps the radiation down to an insignificant level.

Our obligation in Product Review is to present all the relevant facts our members might want to know about a product. The failure to meet spectral purity requirements (by more than "a dB or two," by the way) certainly falls into the category of "relevant facts," as does the demonstrated receiver strong-signal performance. Also in that category, for a kit, is information about the quality of the assembly instructions and manual, which we said were good. Sure, we covered product performance, not only the building itself, because in the end, the buyer wants the enjoyment of building *and* the performance.

Whether or not a manufacturer advertises in QST has no bearing on whether a product is selected for review. I don't imagine you'll believe that, but it's true. To keep it that way is one reason why the person who selects what will be reviewed and the person in charge of advertising are two different people who work in wholly separate branches of the HQ organization.

While I wouldn't kick you out, I don't know how others would feel. In my opinion, how you transcribe your code is your business, not anyone else's. If you have to have a laptop there to copy, so be it. But you'd better be able to show me the difference between an AR, SK, BT, and DN prosign. Obviously, BT would be like "--" and DN would be "/". But how about SK and AR?

What if your battery were to run out on you?

Scott NF3I I've seen KK3F do 40 wpm on a BRAILLE keyboard with perfect copy for minutes at a time.

Get a medium wave receiver, tune it to a clear channel and go about looking for the source of the noise. It may be a bad joint in a power line, it could be a faulty appliance but it is most likely to be a computer.

Check out for sentral heeting controllers, theft alarms etc. If you get really frustrated, try turning off all the ac power and running the rig off a car battery.

If you can isolate your own house, prey for a power cut.

I assume you don't live near a welding shop.

> -Steve N2WSA

Steve,

Since some of the logic behind my posting the FCC Daily Digest might not be obvious, I'll take this opportunity to explain it.

First, I agree that 99.9% of the material is not directly relevant to Amateur Radio. However, that material does teach some lessons that I feel are very important to Amateur Radio at this moment.

First, look how small and unimportant Amateur Radio is in the FCC's daily operations. Of course they'd be spending time on broadcasters, but look how much importance is attached to common carriers, land mobile, personal communication services other than Amateur Radio, etc. We indeed do seem to take up only 00.1% of the FCC's operations. I feel this gives us a feeling for the broad view of the FCC. It's certainly given me some feeling for the importance they place on some of the competitors for our frequency spectrum and their enforcement time.

You might also gain some insight into the way such things as enforcement and rule-making are handled from the way they happen daily in other services. Since I'm planning on filing an STA for an experimental use of the amateur service, reading this material has been important to me. When I need more in-depth information, the phone number for the FCC contact is right there.

I have had some concern about the use of bandwidth and the appropriateness of rec.radio.amateur.misc as a forum for this material. For that reason, I surveyed the newsgroup readers, and the result was almost 100% approval for the postings, with a few comments that I might edit the material, add explanations to it, or cross-post it to different groups. By the way, net readers who are concerned with constitutional issues in broadcasting, etc. have been dropping by rec.radio.amateur.misc to get these articles.

Editing the FCC Daily Digest to remove material unrelated to Amateur Radio would place unreasonable demands on my time and put me in the position of possibly mis-representing the FCC. No way. I wish others would comment on

some of the material in the Digests, since there are some real experts reading this newsgroup.

Fortunately, FCC.GOV is now online and they will soon start distributing this material themselves, so the Daily Digest postings will soon disappear from rec.radio.amateur.misc and come to those who are interested in a more convenient form. The administrator at FCC.GOV is busy configuring his system, and will post announcements when the system is ready to provide you service. Please don't bother him until then.

For the curious, until FCC.GOV is fully operational you can access the FCC bulletin board directly this way:

telnet fedworld.gov
(set up your login, and get to a prompt)
/GO FCCSTATE

I find that Fedworld is running at full capacity most of the time, and thus it's easiest to get to the BBS late at night.

>The present FX-146 incorporates some of my suggestions for improving the
>FTR-146. But my approach was not, "you idiots don't know your ass from..."

The implication is that Jeff's approach was this. Do you knoe something we
don't?

>: It didn't work correctly when I finished.
>
>Mine didn't either... kits rarely do. I never did get the controlled-carrier
>modulation working right on my HeathKit DX-40 and Heath was completely
>unsympathic and unresponsive... and I learn more when the kit doesn't work.

Excuse me? In the 20 or so years I've been building kits, especially Heathkits,
I've had at least 90% of them work from the moment the power was turned on.
This includes the Heathkit dot matrix printer I built with both electronic
and mechanical assembly.

>: ...having to stretch some of the coils ...to get power out of the TX.
>
>Jeff, if you don't have a variable cap, how else are you supposed
>to adjust a tuned circuit? I have been stretching and squeezing coils
>for 40 years. Air wound inductors are variable inductors, you know.

Err... settle down Cecil; I think Jeff is mentioning that the assembly
manual didn't say you needed to stretch the coil.

Settle down, Cecil. Jeff had a certain experience that differed from yours.
I will say, flat out, that John Ramsey indeed bad-mouthed Jeff Gold by
name during a phone call with me despite the fact I asked him not to do so.
This is *not* good business, no matter how much of a fan you are. This appears
to be why Jeff felt compelled to make his post.

1630. Re: RAMSEY FX TRANSCEIVER

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-16 19:45:35 UTC
From: greg@netcom.com
Message-ID: <gregCLC1K1.w9@netcom.com>
Source record: 270981

In article <x8yqthx.jramsey@delphi.com> jramsey@delphi.com writes:
>
>And one wonders why we don't advertise in QST, it's the attitude of
>history re-writers such as J.B. I was there, and the facts just ain't so.

I have no doubt that there was some mis-communication. Only a very
stupid business would snub *the* trade publication, on purpose. Seems
to me that *BOTH* John and Jon have a bit of a tendency to handle
negative feed-back defensively, as opposed to trying to figure out
why someone got the impression they did from their respective organizations.

>I'd rather talk on the phone!

Actually, John, there have been a couple of stories related concerning
phone conversations that net.hams have had with you. Some have been
satisfactory to your customers. Others apparently have not.

> But I had to respond to such talk. You see, the
>ARRL couldn't get their kit to work!

Not exactly a ringing endorsement of the product, or a reason to recommend
it to a newcomer, is it?

> So we sent them an assembled unit.

...which ought to have worked perfectly...

>Yes it did not meet the FCC specs for spurious - missing by about a db or
>two (I'm at home and don't have notes handy).

The point is, what is (by your account) your best effort yielded a
rig which was illegal to use on the air. That (by your account) it
was a Ramsey-completed unit only makes the company look worse.

> The ARRL missed the whole
>point of the kit which was to promote kit building, etc,etc.

I don't think I understand... ...do you mean that you intend for
us to build your products, but not USE them? Or do you feel that your
service to the amateur community in providing kits for hands-on
training overrides your obligation to provide a legal and
functional product? I mean, generally, when I see an ad for an
'Amateur 2-meter Transceiver' and that is a new item, I expect
that it will meet the standards for use on that band. Is that
an unreasonable expectation?

> Now. I'm
>sure you are thinking, "but it didn't meet FCC!"

Yes. Correct. Damn straight. Because that, John, is the bottom line. It is not QST's responsibility that your product didn't come up to the standards that *ALL* amateur equipment is measured against. And they have not wronged you by pointing it out. On the contrary, they have done more than they had to by giving you the opportunity to take corrective action, and offering a limited endorsement, rather than outright panning it. And, it is worth noting, they held back on reviewing your initial product, which also showed some defects. They've really been pretty good to you. Not a few of us would have preferred them *NOT* to cut Ramsey such slack.

> True, but for a fascinating
>contrast, look at the GLOWING review of the MFJ regen receiver! Guess it
>doesn't spray RF.I do believe that MFJ has been quite a big QST advertiser, too.
Interesting question, but I can't help thinking that you're trying to distract from the issue of *your* product. And of course I would note that I have seen at least one 'GLOWING' review of your product in a magazine in which YOU advertise. A review/article which, by the way, missed some of the pitfalls.

>No, you'll not see a Ramsey ad in QST. It was years ago that I was approached
>by a QST ad director to advertise. He expounded how QST was looking out for the
>amateur, requiring test units before accepting ads. I responded that they had
>plenty of ad pages from DSI, a since defunct freq ctr mfg who sold trash and
>was openly taking $$ for products they had no intention of shipping! Of this is
>the virtue you speak? Well, DSI closed shop, took QST readers for hundreds of
>thousands of dollars and even stuck that nice old ad director too!

So how does all of that explain why *your* ads aren't there? Have you refused to cooperate? What does DSI have to do with your company?

>Yes, I'm hot and seeing this kangoroo (sp?) court

Indeed. Seems as though you don't have much of a regard for your customers' opinions. My impression is that the FX kits have been described here as sometimes problematic, and sometimes very good. Note has been taken of hard data supplied by the ARRL. And subjective performance evaluations have been shared. And you yourself seem to hint that you regard them as more educational than functional (the 'point' above).

The only time it got really personal seems to have been in the descriptions of a couple of individuals' encounters with you by telephone.

Unfortunately, the manner of your posting tends to lend credence to the implication that your resonse to concerns about the quality of the FM transceiver lines is a bit on the, well, 'defensive' side.

> makes me long for my work-
>bench rather than this CRT.

Probably not a bad idea. While you're there, perhaps you might look into the challenge of producing a kit from which it is possible for average (or lesser) builders to get consistent results. If it were me, I guess I'd look into offering the option of pre-assembled rf sections,

Admittedly, this is a tough problem, tougher than it was at the time Heathkit had to face it. But if the kit industry is to be viable as more than a curiosity, face it it must.

> I don't have the luxury of getting paid to
>read and respond to everything here - but I do welcome phone calls to myself
>at the office (716) 924-4560. Just ask for me.

John, you seem to want things... ...the reviews, how you talk to customers, how your products are discussed, to be on your terms. With respect, I don't think that's a realistic expectation.

somewhere i thought i had info on where the wireless cable guys were supposed to be located. can't find it now -- certainly someone here has the information - more out of curiosity than anything else -- we know the format of transmission to be relatively secure.

the wireless catv guys are using a wide variety of antennas around here and we're trying to figure out exactly why 2 houses side by side would need vastly different antennas...unless there's more to it that just that.

early reports indicate that the wireless cable guys are beating the local CATV outlet (time-warner) on both quality of delivered picture (we have yet to see how it looks in the rain) & on price (free disney, no junk shopping channels and a minimum of bible thumpers for about a buck less).

thanks,

bill wb9ivr%pubs%genav.mlb@ns14.cca.cr.rockwell.com

1633. Communications links with Sarajevo

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-16 20:09:41 UTC
From: slm@world.std.com
Message-ID: <CLC2o6.7xu@world.std.com>
Source record: 270984

Even the biggest supporters of ham radio will admit that it can't substitute for a conventional telecommunications network; hams can't be expected to take the place of regular phone and postal service indefinitely.

Yet that is what the hams of Bosnia-Herzegovina have been trying to do for almost two years now. Serbian nationalists besieging Sarajevo, cut off postal service in April, 1992, and cut off telephone lines to the city in July, 1992. Sarajevans have been under a communications blockade ever since.

So, for this city of more than 300,000 people, there is virtually no way for them to contact loved ones outside. And, people in the rest of the world with family and friends in Sarajevo have almost no way to find out if their loved ones are OK.

As a result, the few hams able to still operate in Sarajevo are overwhelmed with requests to try to pass messages in and out of the besieged city. They are doing heroic humanitarian work, but this can't substitute for restoration of phone lines. They really need our help to try to get their regular phone links back.

It turns out that the telecommunications equipment which could restore phone service between Sarajevo and the rest of the world IS SITTING IN A WAREHOUSE IN DALLAS, TEXAS, BECAUSE THE UNITED NATIONS HIGH COMMISSIONER FOR REFUGEES REFUSES TO ALLOW IT TO BE FLOWN INTO SARAJEVO AIRPORT. The reason? U.N.H.C.R. says the equipment isn't "humanitarian aid!!!!"

I think hams more than anyone understand that providing communications during times of crisis is in fact a great humanitarian issue.

Several U.S. Congressmen, including Rep. Edward Markey, chairman of the House Subcommittee on Telecommunications and Finance, are working to try to get the U.N.H.C.R. to reverse its decision and allow the equipment to be flown into Sarajevo's airport (which is under U.N. control).

Markey's office is trying to get as many people as possible to contact their senators and congress(wo)men by Tuesday, Feb. 22, and ask them to co-sign a letter to the U.N. High Commissioner for Refugees urging that the equipment be allowed in.

I am hoping that some hams might consider helping this effort -- and our colleagues under siege in Sarajevo -- and make a few calls to your legislators urging them to sign onto the letter. The text of the letter, and Markey's correspondence to other Members of

Congress, is below (taken from soc.culture.bosna-herzgvna).
If you know who your representatives are but don't have their
phone number, you can call the Capitol switchboard at 202-224-3121.

Thank you.

73, Sharon KC1YR

This is the letter that Congressman Markey is asking his
Congressional colleagues to sign (and that you should ask your
legislators to sign):

Ms. Sadako Ogata
United Nations High Commissioner for Refugees
Case Postale 2500
CH 1211 Geneve 2 Depot

Dear Commissioner Ogata:

We understand that the UNHCR has rejected a request to permit
transport of telecommunications equipment into Sarajevo submitted
on behalf of the Bosnian government by Mr. Muhamed Sacirbey, Bosnian
Ambassador to the United Nations. As concerned Members of the United
States Congress, we are writing to urge you to reconsider this
decision and end the communications black out in this besieged city.

Although we respect the need to monitor closely all shipments into
the Bosnian capital, we firmly believe that the telecommunications
equipment constitutes humanitarian aid and should be airlifted at
the earliest possible opportunity. Because telephone links have been
severed by Serb militants throughout the 22 month siege, those with
relatives and friends in Sarajevo are left to agonize daily over the
possibility that their loved ones have been injured or killed by the
relentless shelling of the city. Additionally, the total lack of
communications equipment further isolates the residents of Sarajevo
and prevents rapid access to emergency services. In fact, similar
equipment is currently supporting humanitarian missions in Somalia
and other areas. Therefore, we believe that this shipment to Sarajevo
does constitute humanitarian aid, and lifting the ban on the
transportation of telecommunicatoins equipment would be a humane action.

We urge you to allow the telecommunications equipment to be shipped
to Sarajevo. Thank you for your prompt attention to this matter.

Sincerely,

And this is the letter Congressmen Markey and John Dingell are sending
to their colleagues.

RESTORE SARAJEVO'S LINK TO THE WORLD
February 14, 1994

Dear Colleague:

Last week, the international community watched in horror as scenes from the bombed-out marketplace in Sarajevo were beamed into homes around the world. For those with relatives and loved ones in the Bosnian capital, these images were even more frightening. Because telephone links have been severed by Serb militants throughout the 22 month siege, relatives and friends were left to agonize for hours and even days over the possibility that their loved ones were injured in the blast.

While residents of Sarajevo suffer under a total communications blackout, the telecommunications equipment needed to lift this informational embargo sits, packed and ready to go, in a warehouse in Dallas, Texas. The United Nations High Commissioner for Refugees, which controls shipments into the Sarajevo airport, has refused to allow the equipment to be delivered on the grounds that the materials do not constitute humanitarian aid. If relieving the anguish of thousands of Bosnians and their loved ones outside of Sarajevo does not qualify as humanitarian aid, then we do not know what does.

The U.S. Department of State, which has the authority to recommend to UNHCR that the equipment be sent, has refused to intervene because it was advised by the Defense Department that the materials could have military value. Clearly, the export of materials with a potential dual use should be carefully controlled. Within the United States government, the Commerce Department strictly regulates the export of American products with military applications. The claim that the telecommunications equipment bound for the Bosnian capital constitutes military assistance, however, is completely groundless. In fact, the identical equipment which UNHCR is denying Sarajevo can be shipped without a special export license to Iran, Iraq, China, Syria, and Pakistan, among others. If this equipment is so dangerous, why does the U.S. government allow it to be exported so widely while refusing to send it to Sarajevo, a city under siege with virtually no means to defend itself?

As NATO prepares for possible airstrikes, further shelling of Sarajevo by Serb forces is likely. Unless the UNHCR permits the transfer of this telecommunications equipment immediately, Sarajevans and their loved ones outside the city will be subjected again and again to the agonizing uncertainty resulting from a preventable communications embargo. After almost two years of bitter siege, Sarajevo's residents have been deprived of all civil, personal, and social rights. Everything that makes for regular urban living has already been taken away from Sarajevo and its citizens, and still the UNHCR continues to deny Sarajevans one of the most basic of all rights, the right to talk to each other. While we agree that UNHCR must monitor shipments into Sarajevo, we find some of their decisions rather curious. For example, the UNHCR blocked a shipment of surplus underwear headed for the Bosnian capital because of supposed military applications.

Lifting the ban on telecommunications would be a humane action, especially considering the inhumane inaction which has characterized the international community's response to this bloody conflict up to this point. If you are interested in signing the attached letter to the United Nations High Commissioner for Refugees, Ms. Sadako Ogata, urging her to permit the transfer of the telecommunications equipment, please contact Mark Bayer of Representative Markey's office at 5-2836 by the close of business on Tuesday, February 22.

Oh no. Cecil, are you going to be the net.psychologist and analyze what we say and how we say it? These newsgroups aren't science journals - were not turning out research papers on here. Most are at work and in a hurry, and will type out their comments as if they were speaking to someone. Jeff got his point across - we understood what he said quite clearly, and I don't think anyone (except you) cares how he said it:

1. Joe is a liar
2. Joe has lied in the past
3. Joe frequently lies
4. Joe is currently lying
5. Joe will continue to lie

I think 1. encompasses all the others quite nicely.

Oh, by the way: I am a mathematics lecturer - isn't `lecturer' a thing just like `liar'.

But please, stay indoors.

I've quit going to Waikiki Beach not for puritanical reasons but
because seeing all those tourists with their stomachs hanging
down to thier knees is just plain nauseating. You folks from the
Mainland (your side of the Pacific) don't seem to take very good care
of yourselves!

As someone else pointed out, look at the photos in QST; do you really
want to see those folks nude? Our view is not necessarily juvenile
or puritanical - it is just that we don't take delight in looking
at things that are not appealing. Do you frequent art gallaries?
Certainly you'll see paintings that don't appeal to you; yet no
one would dare say that you're juvenile or puritanical.

Okay, I'll shut up since this has nothing to do with .misc.

> jackets if anyone is willing to part with one!
>

You might try contacting Yaesu directly and asking. I was lucky enough to win a snazzy-looking Icom jacket last year, which, had it not had my callsign on it and been a size or two too small, might have become my husband's jacket. :-) I talked to someone at Icom who told me how to order a jacket directly. So now my husband and I match!

73 de Faith N1JIT

p.s. if anyone orders a jacket from Icom, they'd better be prepared to do some serious waiting -- it takes several months for it to come in. I think they have to grow the cotton first... :-)

In article <45@ted.win.net>, mjsilva@ted.win.net (Michael Silva) wrote:
> I've got a bag full of 3-pin semiconductors, small-transistor
> sized. They are marked either "U1994" or "U1837E". For some
> reason I think they might be RF JFETs. Anyone know what they are
> and what they might cross to? The manufacturer's logo looks like
> the bottom half of an 8-sided compass rose (4 polygons). Thanks.

Mike-

These are both N-Channel JFETs, manufactured by Teledyne Semiconductor. I found them in an old "selector guide" dated 1973. It lists Teledyne at 1300 Terra Bella Avenue, Mountain View, California 94040, Phone (415)968-9241. However, in 20 years, the company could have moved or gone out of business!

The U1837E is listed as a member of the "2N4391 Family" General-Purpose Switch, in the plastic package category. No lead configuration was given, however. Its data is:

rDS(ON)(Max.) 30 ohms
VGS(OFF) (Min.-Max.) 5.0-10 V
ID(OFF)(Max.) 0.2 nA
Ciss(Max.) 16 pF
Crss(Max.) 5 pF
BVGSS(Min.) 40 V
IDSS(Min.-Max.) 30---mA

Typical Characteristics curves for the 2N4391 family, are shown for Yfs, rDS(ON), IDSS and ID.

The U1994E (rather than the non-E) is listed as a member of the "2N4416 Family" VHF RF Amplifier - 400 MHz, in the plastic package category. Its data is:

Yfs(Min.-Max.) 4,500-7,500 micromhos
IGSS(Max.) 100 pA
VGS(OFF)(Min.-Max.) ----6 V
IDSS(Min.-Max.) 5-15mA
BVGSS(Min.) 30 V
Ciss(Max.) 4 pF
Crss(Max.) 1.0 pF
400 MHz N.F.(Max.) 4 dB

Again, Typical Characteristics curves for the 2N4416 family, are shown for Yfs, rDS(ON), IDSS and ID.

I hope you can find someone with more up-to-date information, especially the lead configuration.

Something that has not been clear to me from the start of this thread is why the people who are smart enough to de-bug assembled kits that are obviously in dire need of it are not smart enough to assemble the things from their own components in the first place. Is it cheaper buying one of these kits than it is buying the individual components?

Scrounging around for all the parts you need to build a project is not all that easy. I know. I am building the swr/power meter present in the ARRL handbook and am having a beast of a time finding the proper ferrite beads. The local vendor does not carry Amidon beads and I can't find out the appropriate values for the Amidon part so I can buy the equivalent. The chips needed required shopping with several vendors before I got everything I needed.

Cecil-

Over the years, I have seen John at his booth at several hamfests. He may even be at the Orlando Hamfest this coming weekend, if you happen to be in the Central Florida area.

My impression is as yours, that he is a reputable person. While his products are not in the Kenwood or Icom category, neither are his prices. I have a nice solid-state, dual trace, 20 MHz oscilloscope, purchased from him several years ago. Except for the nameplate, it is identical to one sold by several other companies. However, the other companies charged a LOT more for theirs!

I think the kits he sells are aimed towards people like ourselves, who are quite willing to go through the ordeal of de-bugging a kit, for the feeling of accomplishment from getting it to work! Unfortunately, we are like dinosaurs about to become extinct.

The modern ham seems to think a kit is something you merely plug the parts into, like assembling an IBM-clone computer from modules. From that point of view, I'll admit that John's kits are not "modern".

> should I wait until my paper speed catches up to my keyboard speed?
>
> Opinions requested.

I am only one VE, so this is just my opinion here, the actual test conditions are up to the VEs administering the test. Every VE team I know of though tries very hard to make the testing as fair and flow as smoothly as possible.

The general rule is that you must show the VEs that there is nothing in the computer memory which could help you during the test.

The easiest way would be to disable (remove?) the hard drive and run with only the operasting system and typing software. (Obviously *not* a morse reader of any type :-) You have to be able to demonstrate that t he hard drive is empty or disabled though.

Actually copying every word is overkill, since all you need to do is to take notes much as you would in an actual QSO. You can pass the test with *either* the required number of consecutive characters or answering enough questions correctly.

BTW if the VEs will allow it, sit for the next higher speed test as well, after listening to 20wpm for five minutes it is amazing how slow 13 wpm will sound!

If you get enough consectutive characters for the 13 wpm test then you can be given 13 wpm credit - giving you an extra try with no penalty if you don't make it.

73 and GOOD LUCK!

1653. Update for Periodic Reminder of World FTP site

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-17 00:28:47 UTC
From: wy1z@netcom.com
Message-ID: <wy1zCLCEo0.Cpp@netcom.com>
Source record: 271003
Cross-posted to: rec.radio.amateur.misc,rec.radio.shortwave,rec.radio.scanner

This is a periodic reminder that the Boston Amateur Radio Club maintains an
FTP area on World - ftp.std.com (192.74.137.7) in pub/hamradio.

This area is accessible via: anonymous ftp, gopher, and World Wide Web
(and possibly other methods I'm not yet aware of). World is not
fsp-able yet (I asked them).

Via Gopher, the easiest path to the area is by selecting the following
from World's main menu:

18. Membership and Professional Associations

3. Boston Amateur Radio Club

And go from there...

Please feel free to browse through the area.

If anyone has any questions about it, please do not hesitate to e-mail me.

Also, up-to-date copies of the files on the ARRL's information server
(info@arrl.org) are available in the directory pub/hamradio/ARRL/Server-files.

All text files are uncompressed, so they are both retrievable and
viewable via Gopher and World Wide Web. (If you have any troubles with
any text file, please e-mail me).

Source code for programs is always welcome. It can permit people to use
those programs on other computers with other operating systems.

1654. Base Station Power Supply

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-17 00:35:15 UTC
From: rob@vitsemi.com
Message-ID: <1994Feb17.003515.4688@vitsemi.com>
Source record: 271004

One of my current projects is to set up a base station for VHF/UHF using a mobile rig. This means I need a 13.8V power supply that can supply up to 12 Amperes. I know the supply should not have too much ripple, but I do not know how much is acceptable.

Initially, I was planning on building/purchasing a 12V/14A supply. But now I am considering using a deep discharge marine lead-acid battery that is continuously charged for my power supply. Are there any safety issues associated with keeping this type of battery on continuous charge?

Using such a battery has the advantage of being a good emergency backup. The batteries cost much less than power supplies, so if the charger is inexpensive, the cost will be about the same.

The 1993 ARRL Radio Amateurs Handbook has a circuit for a 12V charger. It appears to be suitable for my needs. It appears to be intended to be used as a charging circuit, but not while the battery is in use. Is it suitable for continuous operation? I would expect that the battery would keep ripple quite low.

In addition, I would rather not make my own PC board. The Handbook does not give a source for the PC boards. Does anyone have any PC boards for this available?

Advice and suggestions for this project are welcome.

Last week his 40 meter antenna fell victim to the famous Calvert County (MD) ice storm. The next day he lost power for 6 straight days. Now he's going into the hospital for hip surgery, followed by 6 weeks of recovery with nothing to do but watch ice melt. Not a good month for Ron Nord, N3AKP, who, by the way, is no spring chicken.

I wouldn't post this request if I didn't think it would make a difference. But it would really be great if you could cut loose an extra QSL card and send it along to Ron with perhaps a little "get-well" message. It's the kind of thing that would brighten his spirits and maybe even speed his recovery a bit.

Hey, thanks, guys! Ron's address is: Ron Nord, N3AKP
3621 Halls Creek Lane
Owings, MD 20736

>

Do you operate CW? The reason that the thumb on the right hand is the dot lever is probably historical. Old time "bugs" used a weight on a spring loaded lever arm to send dots, and the thumb controlled that lever. On the other hand (so to speak) a good friend of mine sends with his right hand, but he learned to send using a paddle configured for a left handed operator - as a result, his right hand thumb sends space elements. I have another contest operator friend who did, in fact, teach himself to send with his left hand so that he would write with his right in contests. That was years before CT and other computer logging programs made keyer paddles all but obsolete in contests...

73 de Drew K9CW (still uses his right hand to send CW)

1661. FT-530 Receive Problem

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-17 02:58:26 UTC
From: leber@panther.warm.inmet.com
Message-ID: <CLCLLE.26I@inmet.camb.inmet.com>
Source record: 271012

For those of you who have been following my adventures with Yeasu trying to resolve what seems to be internally generated RF noise around 145.14 Mhz, here's the latest:

They have now had the radio (second time back) for about 2.5 weeks. Last Thursday, the phone rep told me that the unit was waiting for a Quality Control check before being shipped (I didn't ask where Quality Control was when they didn't fix the problem the first time around). It's now almost a week later, and still no radio, so I called to find out what was going on.

After being told they would call back in 15-20 minutes, and waiting 45 minutes with no response, I called again, and finally got through to 'Sam' (didn't get the last name), who is the Service Manager. He said he could not find any sign of the interference. No matter what they had tried, nothing other than 'normal FM noise' was audible in the frequency range in question, and no other receivers held near the 530 picked anything up. This conversation went on for about 15 minutes, at which point I was connected with Chip Margelli, the Customer Service Manager who I had talked with several times before.

Chip reiterated Sam's statement that they could find nothing no matter what they tried. He repeatedly attempted to find the noise while we talked, but couldn't do it. Naturally, if they can't reproduce the problem, they can't fix it.

At this point, I just want the thing back, so I said to ship it back, and I would try it out again. If the problem still exists, I'll try to work with them to pin it down. I thought I had pretty much proven it was coming from the 530, but I'll see if there is some undiscovered external force at work here.

I should have the unit by Friday. Maybe the problem has magically disappeared due to the therapeutic effects of UPS shipping. I'll keep you all posted.

Cheers,
Tom

P.S. I still think it's a pretty nice unit despite this annoying problem.

Dear Sirs,

Archive-name: radio/ham-radio/archives

I'm interested in the following files listed below:

How can I get them?

antenna_refs - references for articles about antenna designs
arrl_fo_jobs - descriptions of some ARRL Field Organization jobs
carpet.loop.2 - Antenna for apartments and small spaces
comb6.zip - HF Propagation Predication program
dxcc-k2di - ARRL DXCC country list
dx_w2iol.dat - data for all country prefix, position, etc
dx_w2iol.doc - documentation for the above database
florida_antenna - Florida State antenna law info
hams_on_usenet - list of ham operators and e-mail addresses on the ne
hf_rigs - QST reviews of available HF rigs
mail_order - a database of electronic mail order shops
manufacturers - names and addresses of ham gear manufacturers
newcomers - tips and hints for those new to amateur radio
pio_handbook - ARRL Public Information Officer's Handbook
qsl_bureau1 - information about the ARRL QSL bureau
qsl_bureau2 - "what should I do if" list for the QSL bureau
qst_prodrev - index of ARRL product reviews in QST

Thank you for any help!

: * Dana H. Myers KK6JQ

Well, Dana, when one particular customer's biggest thrill in life is stabbing the owner in the back, it may be that the customer is not always right. This thing between Jeff and John is obviously personal. As such, it has no place here. Notice how carefully Jeff avoided telling us what product he was talking about. A new reader could infer that he was talking about a presently available product, which he was not. My only purpose here was to point out that he was talking about the FTR-146, not the present FX-146, and since he has not purchased anything from Ramsey in two years, is not a present authority on their products.

There were problems in the original FTR-146 design. I fixed them. There were problems in the original FX-146 design. I fixed a couple and accessed a data base containing fixes for all the rest... speaking of rest, I need some from this thread.

: which GAP makes. It is a smaller version which is roughly comparable
: to the R-7. I have a lot of input on the Cushcraft, but not much

After several calls to GAP and LOTS of tweaking, I've managed to get 5
out of the 6 bands working quite well. I've been waiting for the weather
to get a little better before I attempt to improve the SWR on 17m.

In A/B comparisons with my G5RV/Tuner combo, the GAP was consistently
better on DX, while MUCH worse with local contacts (probably due to
polarization differences). Also, the GAP is VERY quiet.

Another advantage of the GAP: Full-band coverage on all but 10m.

All in all, I guess I'm happy with the GAP. I'm not sure I would buy
another, however.

Well, Cecil, I certainly did not knock the FTR-146 in my posting. I simply said "John Ramsey bad-mouthed two individuals by name". Jeff stepped forward and said "Well, here's my side of the story". Yes, Cecil, this is about personalities, not kits. No, Cecil, this is about the personalities of the people at an amateur radio company that does business with amateurs and is at least as reasonable for rec.radio.amateur.misc as anything else. What other newsgroup should we discuss this in?

Oh, Cecil, please listen carefully: only a few weeks ago did John Ramsey bring up Jeff Gold by name and proceed to criticize him strongly. It doesn't matter which kit is being discussed. Listen carefully, I'll summarize for you: What is being discussed is Ramsey's way of doing business. Is that clear enough? Now, carefully consider the implication of this: it doesn't matter which kit Jeff built, since the issue was the way Ramsey does business. Now, carefully think about this item: a good business does not berate customers in the presence of other customers. Are you suggesting this is not true? Are you suggesting a business should *ever* engage in insults and personal attacks

on other customers?

Look, for the record, I had a relatively pleasant chat with John Ramsey on the telephone. I don't dislike John Ramsey or Ramsey Electronics. I just had an experience which is very important and should not be trivialized; businesses do not get better if they are not constructively criticized. I warned the readers of this group that Ramsey Electronics engaged in a tactic that I (and others) find highly offensive. At the time I asked John *not* to do it, but he insisted. So, I ended up bringing it here, several weeks later, when the same tactic appeared on the Usenet. Take it for what it is worth.

1669. DX: Tune In To Tuva

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-17 04:37:00 UTC
From: greg.pool@cld9.com
Message-ID: <7.14535.976.0N5B8509@cld9.com>
Source record: 271020

TUNE IN TO TUVA
Greg Pool WH6DT/6

A group of radio amateurs from the Central Coast of California met with hoomeii-master Kongar-ool Ondar and his family last October in an effort to bring Amateur Radio to the land of Tannu-Tuva, near Mongolia in central Asia.

Ondar and his student, Bady-Dorzhu, had been showcasing hoomeii, their unique style of throat-singing, at concerts in New York, San Francisco, and Los Angeles. Their trip included a heartwarming appearance on the former Chevy Chase Show, where nine-year old Bady's performance stole the show.

Ondar's livelihood is the teaching of hoomeii, which dates back thousands of years. The performer accentuates the natural harmonics present in all our voices to sing several different tones all at once. An oddly mesmerizing sound to the listener and equally difficult one for the performer to maintain, it is a national treasure to the Tuvinian people and a heralded craft throughout the world.

Spearheaded by Pat Barthelow AA6EG and Ralph Leighton, of Friends of Tuva (FOT), the group presented radio equipment to Ondar for delivery to the Lyceum of Tuva, a high school located in the capital city of Kyzyl. FOT was founded jointly by Leighton and the late physicist, Nobel Laureate Richard Feynman.

The equipment included a Drake 2-NT transmitter and 2-C receiver, donated by Paul Herrschaft KQ6G, and both the ARRL's Radio Amateur's Handbook and Antenna Book, donated by Jim Maxwell W6CF.

"Tannu-Tuva is an extremely remote republic of about 300,000 people," Pat informs. "The winters are very severe; temperatures can reach -60 deg F. The republic is surrounded by the 10,000-foot high Sayan mountain range to the north and the Tannu-ola mountains to the south.

"Between 1921 and 1944, Tuva was an independent state. They joined the Soviet Union voluntarily in 1944 as an autonomous region, and were consti-tuted as an autonomous republic in October, 1961. Tuva now faces a new future as a member of the Commonwealth of Independent States."

A member of the Naval Postgraduate School ARC in Monterey CA, Pat is working on furnishing enough ham radio equipment to help activate a radio club at the Lyceum.

"The Lyceum amateur radio station," he says, "is likely to become a centerpiece of attention throughout the republic, enabling the school to become connected to the rest of the world, particularly to other schools. They are very interested in communicating with other students."

Although not an amateur himself, Ondar immediately recognized the Morse Code key given to him and gladly agreed to bring back the equipment to the Lyceum in Tuva. Quite a celebrity in his own country, Ondar informed the group through Leighton that he would tell his fellow Tuvinians of his visit with the US amateurs.

Besides FOT, Pat is also working with the Foundation for Amateur Radio International Radio Service (FAIRS) and the Northern California DX Association (NCDXA).

On hand to represent the NCDXA was Jim W6CF, who noted that Tuva (UA0Y..) is on the air but still quite rare. "Tuva is located in Zone 23, which includes Mongolia and Tibet, but is not that active." Jim informed Leighton that the project would be of interest to a great many amateurs, even to the point of DXpeditions into the area.

Pat adds the power grid there is 220 volt and 50 Hz. "HF, VHF, UHF, satellite, and packet is needed. If anyone knows how to obtain ham radio equipment through educational grants, I would love to hear about it."

This first delivery will be a test to see how best to transport radio equipment into Tuva. Hand-carrying anything of significant value through customs in Russia can carry a slight risk. A letter from the President of Tuva in support of the project will accompany all donations.

"Any equipment would go to Tuva under the close accounting and supervision of myself and Ralph Leighton, " assures Pat. Leighton authored Tuva or Bust!, an account of the FOT's formation in 1977 and their ensuing exploits.

You can contact Pat at on internet at 4927 @ msg.com, packet @ K6LY.#NOCAL.CA.USA.NA or mail at 810-B Airport Rd., Monterey CA 93940 USA.

1670. SBPMORSE - Morse to Text w/SB(Pro)

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-17 04:46:12 UTC
From: kayd@storm.cs.orst.edu
Message-ID: <2jusqkINNjsh@flop.ENGR.ORST.EDU>
Source record: 271021

I've been working on source code from DSPMORSE/FFTMORSE and the SB Freedom project for a few days and have come up with a better morse-to-text translating program that seems to be more compatible than either of the two previous versions. I have yet to contact Rocco Caputo or the author of FFTMORSE about the release of their source code, but the SBF kit is available via anonymous FTP and the author has allowed me to release my modified portion of that kit.

Basically, SBPMORSE uses high-speed DMA transfers to get digitized sound from the SB(Pro)'s microphone plug. It then runs it through a fast fourier transformation to create a 16 segment spectrum analyzer. The user then slides a window and a mask over the spectrum analyzer to pick the frequencies from which to detect a tone. The tone is then converted to dits & dahs and finally to text.

Modifications I have done are:
---
eliminate need for ct-voice.drv
change switch to lookup table for code translation
reduce DMA overhead
set up auto-morse-speed tracking
added BT & SK prosigns
support for more "Sound Blaster" compatible cards
allow sampling up to 45KHz when using SBPro
reduced screen flicker
set maximum limit for spectrum analyzer levels

...and more I can't think of right now.

In any case, I'm going to upload the executable to:
wuarchive.wustl.edu:/pub/msdos_uploads/ham/sbpmorse.zip

If you have any problems, send E-mail to me and I'll see what I can do.

>

Even thought the current Ramsey thread is far more colorful, I'd like to get a few basic questions answered.

I've never built a Ramsey kit and have not seen the manual. I have considerable respect for the integrity and accuracy of the ARRL product reviews.

To those who are Ramsey proponents, DID YOU PUT THE THING ON A SPECTRUM ANALYZER BEFORE PUTTING IT ON THE AIR?

If so, what did you see? If not, what will the FCC see if they happen to look? Does the manual tell you to check the spectral purity before getting on the air?

Tnx,

Greg Lapin KD9AZ

1673. Help: QSL Printer

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-17 07:06:03 UTC
From: mcduffie@unlinfo.unl.edu
Message-ID: <2jv50s$80f@crcnis1.unl.edu>
Source record: 271025

This may seem like a strange request, but here goes...

Several years ago, I stumbled onto a specific QSL design that I liked very much. It was a card I received from someone else. The card had no markings from the printer, so I called the sender and asked for the information. Luckily, he still had it. It's now 13 years later, I've reordered from them once, moved once, and yes, lost the address.

I would like to describe the card and see if anyone recognizes the design. It is a thick card stock, flat-not shiney, is yellow at the top, gradually fading/transforming to redish-orange on the bottom. The printer was in PA (I think), and possibly had a name resembling RAU.

If anyone can supply me with the printer's name/address/phone, I would really appreciate it. I'd like to order some new cards from him as soon as possible.

Thank you for any help you might be able to provide.

SYNOPSIS OF ACT

Solar activity was very low. A new region was assigned:
7672 (N03E28).

Solar activity forecast: solar activity is expected to be
low.

The geomagnetic field has been at mostly unsettled levels
at mid-latitudes while some high latitude stations reported
major storm levels. Energetic electron fluxes continue to be at
elevated levels. It appears as if the long duration geomagnetic

storm is about to end. A-Fredericksburg values for the past eleven days are listed below:

Date: Feb 5 6 7 8 9 10 11 12 13 14 15
A-Fred: 21 39 45 42 32 28 38 27 30 28 26

This represents the longest string of days greater than 20 since 1957.

Geophysical activity forecast: the geomagnetic field is expected to be unsettled to begin the period. Active to minor storm conditions are expected for the end of the period due to a well positioned coronal hole.

Event probabilities 17 feb-19 feb

Class M 10/10/10
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 17 feb-19 feb

A. Middle Latitudes
Active 25/35/35
Minor Storm 25/35/25
Major-Severe Storm 05/05/05

B. High Latitudes
Active 30/35/35
Minor Storm 25/35/30
Major-Severe Storm 05/05/05

HF propagation conditions continued to improve to near-normal values over the low and middle latitudes today. High and polar latitudes also showed improvements, although periods of below-normal conditions persisted primarily along the night-sectors where residual localized substorming is persisting. Conditions should continue at current levels until 18 February when the next disturbance from another well placed (although smaller) coronal hole is due to begin perturbing the high and upper-middle latitude ionosphere.

---
NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce

associated x-ray bursts) refer to the begin, max, and end times of the x-rays. Flares which are not associated with x-ray signatures use the optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

A tnc in KISS mode requires tfpcR, not tfpcX!

> might be acceptable.

Why not use standard u-law or A-law compression as used in telephone
systems for decades. The input signal is band-limited to 3.4 kHz,
sampled at 8 kHz and converted with a 12 bit linear ADC. The output
from the ADC (an integer) is converted to a floating point format
consisting of 1 bit sign, 4 bit mantissa and 3 bit exponent. This
is then serialized to 64 kbit/s.

If this quality is adequate for normal telephone networks, then
it should be adequate for inter-repeater links.

This has been used for decades and there should be surplus equipment
avilable.

All modern compression systems are much more bit effective than this,
but I don't think that there are surplus equipment available yet.

Here in Britain, there are no required specs for spurious outputs,
we're held responsible for any problems due to any at any level. I know
that the US FCC has put actual numbers on required performance (sounds
like an improvement on our requirements, to me). So, just from personal
curiosity, what are the consequences to an amateur who puts a radio on
the air that does not meet the FCC specs ?

Hi,

I am thinking about getting a Kenwood TS-440S or a Yaesu FT-757GX.
I would be most interested to hear about your experience with either
of them, or even better a comparison between the two.
Also: any alternative suggestions, e.g. how inferior would a TS-140S or
FT-747GX would be?
My main requirement is good RX performance and I also need a computer
interface to store VFO and mode data, and for the remote control
of as many functions as possible.

Many thanks,
John

>
>Is there a rationale behind this convention?
>

I am left-handed and use a single paddle key set up so that my thumb
does dashes. This habit probably originates from my use of right-handed
bugs back in the 50's and 60's. It does allow me to use any right-handed
ham's keyer without any problems, though.

Actually his pricing was about in line with other resellers of Goldstar scopes, and you can get a very much better used Tek 453A for less money. It's not a ripoff, but it's not that much of a bargain either, even though he cut the price and threw in a digital meter when I bought one from him.

Well I wouldn't object if the kits were marketed as random collections of out of spec parts for a poor design that, if you follow the assembly instructions exactly, won't meet FCC spectral purity requirements, or Ramsey advertised sensitivity, selectivity, and power output specs.

Sure you can replace parts, extensively modify the design, and alter tuneup procedures so that the end product is usable and legal, but only if you have a spectrum analyzer and a bench full of other equipment, as well as a good deal of RF experience. Or if you don't care that you're

spraying RF over half the band and keying half a dozen repeaters at once.

If the kit were advertised as a *starting point* for an experienced builder to develop his own transceiver design, I don't think there'd be much complaint. But as it stands, it's cheaper, and better, to start with a piece of surplus gear that at least met FCC specs at one time, and modify *that* to the amateur band. At least you know up front what you're getting into.

Perhaps hams have been spoiled by the good repeatable designs of other kit suppliers such as the defunct Heathkit, or the current kits available from Down East Microwave and some others, where, if you follow instructions, you'll get a finished product that, if not exactly high performance, at least meets published specs and FCC requirements without need of sophisticated test equipment and extensive experience. There's really no excuse for a design that allows transmission with an unlocked synthesizer. Nor is there an excuse for a PA design that emits a spectrum that looks like a comb except at one razor sharp tuning point. Proper unconditionally stable amplifiers with fixed component filtering are too easy to design to tolerate the Ramsey approach of critically tweaked circuits any longer.

Note that I had fun discovering what was wrong with the design and engineering fixes for it once I realized that there were serious problems. But I don't think most builders would test their transceiver with a lab grade spectrum analyzer and realize it had serious problems that needed fixing. For the ham whose bench only contains a soldering iron, DVM, and maybe a commercial transceiver, noticing that the Ramsey kit was grossly out of compliance with FCC requirements wouldn't be obvious. They'd likely go ahead and use it until a determined band of T-hunters found them and pinned their coax.

Of course, all esthetics are in the eye of the beholder. Aside from it's utilitarian aspect, decorative clothing is designed to mask the ugly, not hide the beautiful. And according to the prevailing esthetic, most hams *need* that decorative covering to avoid offending the eye of the beholder. A prime rule of society is that one shouldn't do something in public that frightens the horses.

There is one in Alaska or was one, between I believe Fairbanks and Anchorage or
was it Fairbanks and Valdez. It used to be run, but not sure if its doen any
more.. It was run by mostly State Troopers, APD (Anchorage PD), and other
Alaskan Police/Law Officers..

Anyone have any info?

>no sense.

Yep. I can only plead brain fade on that one. You're exactly correct.
20log(voltage ratio) is exactly the same thing as 10log(power ratio).
It's the power ratio we hear, but it's the voltage ratio we're
looking at in the A/D-D/A conversions. (Actual devices are current
driven, but it amounts to the same thing.)

>So, what's enough SNR, 50 dB or 100 dB? I suggest it's 50 dB. A
>compact disk gives you about 90 dB, and I'd hate to think we need
>better than CD quality on our voice links!

I agree. We strive to achieve CD quality in our broadcast transmission
systems, but we rarely achieve it. We count on the 62 db spl of a quiet
room to mask the defects in transmission on the lower end. Since 110 db
spl is threshold of pain, we only *have* to deliver about 48 db SNR to
satisfy the listener. People using good tight sealing headphones can
hear the noise, but otherwise it's lost in the ambient room noise.

Note that for amateur use, our source is a live mike in an often less
than quiet room. So there's no reason to have greater than 48 db SNR
in our transmission system since the source SNR will be no better than
that.

>Of course, to realize the 50-dB SNR from the 8-bit system, the signals
>have to use all of the available signal range. If you use less, the
>SNR is reduced proportionally, as the signal is closer to the noise
>floor. That probably argues for something on the order of a 12-bit
>converter for "overhead." But with good ALC ahead of the A/D, 8 bits
>might be acceptable.

ALC often makes the problems worse if implemented improperly. What
we want is enough gain to put the source noise at the floor of the
converter, and a gain *reduction* circuit to ride peaks so that we
stay in the converter's range. That'll minimize our system noise.
If the source has a SNR greater than 50 db, 8 bits will compress
it down to 50 db. If the source SNR is worse than 50 db, we can't
make it better by scaling gain in front of the A/D.

1694. Frequency doubler design, help, VFO.

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-17 15:43:13 UTC
From: asirene@ntuvax.ntu.ac.sg
Message-ID: <1994Feb17.234313.1@ntuvax.ntu.ac.sg>
Source record: 270896
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.misc

Hi,

I need a simple design for a 20m VFO that drops into the place of a X-tal. My exact transmitting circuit is the 6-watter from the 1986 ARRL Handbook.

I have also built a 40 meter VFO from the QRP tranceiver designs in the 1994 ARRL Handbook and they work. But when I use the VFO with the freq. doubler circuit from the September 1993 issue of CQ, I found the output to be too weak and fundamental frequency rejection is insufficient.

The doubler was originally intended for doubling 3.5 MHz to 7 MHz but I am using it to double 7 MHz to 14 MHz. Is there a problem doing this and/or is there a more suitable means of deriving 20 m from a 40 m VFO?

The VFO works fine right now. I just can't get a strong and clean doubled frequency. Can anyone help me, especially if you have access to the documents I cited, could you take a look at the circuits and advise me. Tks.

> obviously in dire need of it are not smart enough to assemble the things
> from their own components in the first place. Is it cheaper buying one
> of these kits than it is buying the individual components?

It can be, but mostly it's *easier* to buy from one source instead of chasing down components from a bunch of different vendors, all of whom seem to have minimum orders well above the price of the components you need from them. I hate having to deal with vendors who are geared to PO numbers and 1000 unit pricing for my little onesy twosy purchases. I can easily run up a *phone* bill as high as the kit cost just tracking down vendors who will sell me the parts.

So I'm willing to pay a premium to the kitmaker because he provides a real service by acting as my purchasing agent for project components. Where some of them fall down is in the *design* of their projects. Their services are rather useless if they supply you with the wrong parts for the wrong circuitry to do the job properly. I think the kit designer has a responsibility to produce a kit that can meet it's claimed specifications when assembled by someone competent to follow instructions. If a lab full of test equipment and ad hoc circuit changes are required for the project to successfully meet FCC specs, that should be stated up front in the advertising.

My main gripe with the Ransey transceiver kit is that the builder is led to believe that he can successfully complete the project with only a frequency counter, power meter, and DVM. That's not true. If you follow the instructions to the letter, you'll have a radio that won't meet advertised specs, and will have an output spectrum that looks like a comb on the spectrum analyzer. You *cannot* just peak that PA for maximum output and have a clean spectrum.

Note: Ramsey isn't the only offender here. Hamtronics kits are at least as bad. In fact, just getting a clean oscillator that will start reliably in their 70cm converter is just short of impossible with the circuitry they provide. You can either get an easy starting comb generator, or you can get a clean spectrum on an oscillator that won't start. Sheesh! A simple design change fixes the problem, but you shouldn't be expected to have to do that.

FWIW, when I modified my IC-28 for MARS use, instead of just cutting the diode, I ran it through a switch and a subminiature LED so that I could avoid accidentally transmitting where I shouldn't. The LED lights whenever the rig is set to transmit outside 14x MHz.

The first time I met Ben was at a nudist resort called Glen Eden near
Lake Elsinore, Ca. It turns out he was wearing shoes & socks, and a baseball
cap with his callsign on it. (it might have had his name on it too, but my
memory is such that I can only remember callsigns).
It was debated for many moons, but finally decided that it was
politically correct to call yourself "nude" while wearing shoes, socks and
possibly a baseball cap, in any order you want (or anywhere you want :^).

This week on Spectrum we are going to visit the world of utility listening with Larry Van Horn. Larry is the ute editor for Monitoring Times. We haven't looked at ute since mid summer and lots of interesting things have happened. Almost 90% of the frequency space from 3 to 30 MHz is dedicated to non-broadcast transmissions and there are lots of fun things to explore.

--
Spectrum airs live Sunday at 0300 UTC (2200 EST Saturday) on:

WWCR, 5810 KHz, Nashville, TN (World Wide)
WIFI, 1460 AM, Philadelphia, PA (Philadelphia Area)
Omega Radio Network, Galaxy III, X17, 5.8 MHz WIDE audio. (Satellite)

Spectrum is rebroadcast:

Sunday at 1500 EST, on WIFI, 1460 AM, Philadelphia, PA (Philadelphia Area)
Monday at 0400 UTC (2300 EST Sunday),
on WWCR, 7435 KHz, Nashville, TN (World Wide)

>done a voltage ratio here ...

Heh, no, I did a power ratio when I was dealing with voltage ratios.
As Jon noted, I should have used 20*log(2^9)=54.18 db.

>>per second. That requires a very good brickwall filter, however,
>>so sampling is usually done at a somewhat higher rate, say 3X
>>or 4X the highest audio frequency. Lets pick 3X. So our required

>
>but after your oversampling and filtering, you don't bother with
>the "in-between" samples anymore ... you still end up transmitting
>10kbps (in your example).

No. The best we can do is cut the number of samples down to the
Nyquist limit of 2xFcutoff by decimation and multiply by the
number of bits per sample. So we're down to 10 kilosamples/sec
times 8 bits per sample or a 80 kb/s digital bit stream. (But
I think you meant that.)

>tho i would say that 8kilosamples/second @ 8bits is quite accepatable.
>64kbps. using an ADPCM encoder you can chop this in half.

Yes, data compression can reduce the required transmission bit rate.
I've been dealing with only the raw sample data so far.

>if you have a soundblaster, you can experiment with both sample rate
>and resolution ... 4k samples/sec is too low, 6k is passable. fewer
>than about 5 bits would probably make things very irritating.

Yeah. If you further reduce Fcutoff, you can lower the sample rate,
and if you reduce the SNR, you can use fewer bits per sample. But
we were trying for "broadcast grade" transmission here. And we didn't
even make that because we restricted Fcutoff to 5 kHz. If we'd insisted
on a 15 kHz Fcutoff, the required bit rate would be 3x more, or 240 kb/s.
Applying the *correct* formula, 5 bit samples would give a SNR of
20log(2^6)=36 db. That actually looks fairly acceptable for ham grade
channels. But there's another effect we haven't discussed. That's
intermodulation distortion. With a 5 bit sample, we have products
at 5 times the sample rate mulitiplied by each frequency in the sampled

waveform. If our D/A isn't linear out to a fairly high frequency, we can get mixing products, or beats, between the various sample products that can wind up down in the audio passband. That'll give us harsh buzzing artifacts in our audio that simple filtering can't remove. The higher the sample rate, the less these step products become noticable. They tend to converge to an infrasonic frequency that's easily filtered.

>>Or we can abandon voice grade radios for the links and use purpose
>>built digital radios with higher baud rates. If we take a 56 kb
>>WA4DSY RF modem (GRAPES), and couple that with an on the fly
>
>or you could just get a pair of gunplexers. pricey, but you also
>get the beginnings of a *very* high speed (>1Mbps) data link. voice/packet/
>whatever.
>
>price/performance/future: how much are gunplexers, how much are
>the WA4DSY modem/radios and compare what both are eventually capable of.

Well the WA4DSY modem is $250, and then you need a transverter. That can run from $150 to over $300, and you need the digital driver to generate and control the bits to the modem. Say the total is $500-$600 per end for the package. That means a link is going to cost $1000-$1200 plus feedline and antennas. Paths of 30-40 miles are fairly routine, barring major terrain blockage, and good high sites can do much better than that.

M/Acom 10mw gunnplexer transceivers are available for on the order of $350 from SI, or raw gunnplexers can be found for $30-$70 on the surplus market. But you have to design an AFC system, and the high speed digital modulator/demodulators for them. Find dishes for them, and find line of sight paths for the links. Costs could be similar, around $1000 per link, but site selection would be much more restricted, and likely range as well (only a couple of miles for reasonable sized dishes and average terrain). Ten watts and 4 foot dishes can give 50+ mile paths at video bandwidths under good conditions, but that's serious money. It could be worth it for the higher throughput in some cases.

Okay, what am I missing? What has the hard drive got to do with it?
Why would you care about a hard drive? Does Seagate put out HDs that
can copy code now? And as for a "morse reader", how would it be able
to copy in a testing environment? This guy is sweating a test. He
doesn't have time to load some program to help him cheat, if there was
such a program. Just watch him like you would all the other testees,
maybe a little closer, if you like. I think you will find that you ae
being paranoid for no reason.

>BTW if the VEs will allow it, sit for the next higher speed test as well,
>after listening to 20wpm for five minutes it is amazing how slow 13 wpm

From: wy1z@netcom.com
Message-ID: <wy1zCLDutw.FJF@netcom.com>
Source record: 270907

The ham radio archives on World had a program called ktwin400.zip.

I have since lost track of who offered it, but when I recently tried to unzip it, zip claimed the files was corrupted. I DID transfer it in binary mode from World directly to the PC.

I tried both DOS's pkunzip v.2.04g, along with UNIX's unzip, but no luck.

If anyone can point me to another location which has this file, I'd be very appreciative. I already checked the hamradio section on Oakland, but no luck.

Thanks much in advance!

P.S. Please note the new FTP address for World in my .signature

1706. Re: John Ramsey

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-17 19:52:01 UTC
From: jcw@kd4dts.dixie.com
Message-ID: <1994Feb17.195201.22281@kd4dts.dixie.com>
Source record: 270908

I built the 2m kit, and was I mad when I was done. I could never get the radio to produce 5 watts, and I had access to a Motorola spectrum analyzer. I talked to a Ramsey 'droid at the hamfest, and said "Oh yea, a tune up is about $10." I said, "Cool, I'll send it off." I talked to the service department who said "Oh, it's $50 to align a radio." I told them that was ridiculous, here's what the other guy told me. They said "Oh, well, if we don't have to fix it, there's no charge, except shipping." I told them "Fine, you won't have to fix anything, the radios not broke". I later find out that I have to pay $50 to get my radio out of hock with these BOZO's. I say "Well?" They say "Well, adjusting the coil on the final (which isn't in the manual) was a repair". I tell them "F**K you, here's $50 give me my damn radio back, I'm never buying another frickin' Ramsey product. Your sales people are liars, your technicians are liars, and you have my radio that I have to pay 50 bucks for, or I'll never see it again." I got it back, and it produces about 4 watts, still under spec. I'll never buy any Ramsey crap again.

: paths at video bandwidths under good conditions, but that's serious money.
: It could be worth it for the higher throughput in some cases.

The 2 Mbps link I built and showed in HR Magazine and which is now in
the ARRL Handbook had at least 10 dB of excess signal(for BER small
compared to 1 error per 1500 byte packet) across 13 miles with 10 milliwatt
sources and 2' dishes. The hardware (excluding a digital controller to
handle the bit stream) cost little more than $100 per end.

Ten watts and a 4' dish can do a *lot* more than 50 miles under good
conditions, if by good you mean line-of-sight. In fact you wouldn't likely
be able to use that much C/N on a terrestrial link.

A 4' antenna with typical feed efficiency is about 40 dBi at 10,250
MHz. Ten watts is +40 dBm; the combination gives +80 dBm ERP. If you
consider a video system with 6 MHz of bandwidth and that 45 dB of C/N
ratio gives "good quality" video, with a 3 dB sytem noise figure the
noise floor is about -103 dBm and you therefore want -58 dBm at the
receiver. The receive antenna gives another 40 dBi and you only need
-98 dBm (into an isotropic antenna) at the receiving site. So, you are
allowed +80-(-98)=178 dB of path loss. At 10.25 GHz this is over 1000
miles; a longer line-of-sight path than you'd be able to actually find
anywhere on the surface of the earth.

In fact, with 4' antennas instead of 2' ones (+12 dB system improvement)
and a "real" receiver instead of a 15 dB NF diode mixer (another +12 dB), the
10 milliwatt sources should be capable of 35 miles with the above video
system requirements.
While it's true that you would need line-of-sight, I think most
practical installations of a lower frequency system also incur
15-40 dB incremental path loss once they leave LOS conditions and
for higher information rate transmission effectively need LOS in order
to stay economic.

If you don't believe this, carefully measure signal strength change on
440 MHz or 1290 MHz when the two ends of a link go from full visual (no

trees etc) line-of-sight to "almost LOS, suburban trees, clutter etc.
I'm not talking about a "still sounds full quieting on the HT here, OM"
measurement where there is 60 dB of excess signal in a nbfm bandwidth
and you can't tell the difference in going to only 30 dB excess, but a
real measurement of signal or C/N. I've done this and most situations
show at least 20 dB of degradation above 400 MHz.
Although 10 watts may be much cheaper at 440 MHz than it is at 10 GHz,
The 2*incremental_antenna_gain = 2*20log(10.25/.44)=55 dB of the
microwave solution far more than compensates for the 30 dB (10 watts to
10 milliwatts) transmit power differential.

Also, at high information rates, the additional multipath and path
variability problems incurred by going to a non-LOS path make the UHF
solution even less attractive since error correction, channel equalization
and additional system margin may be required to guarantee data flow.

Dana, I will give you the benefit of the doubt and for the sake of this discussion, accept what you have said as true... that John Ramsey berated Jeff Gold in a private telephone conversation with you. Now who is the worst offender of common decency and professional ethics... one who berates an individual in a private telephone conversation or one who berates an individual in public on Internet? Seeking professional revenge for a personal insult seems like extreme overkill to me.

I didn't understand until you told me just now that Jeff was complaining about a personal problem rather than a transceiver. In my opinion, the only objective question to be answered here is, does Ramsey make a resonable transceiver for the money? The votes are obviously split and the free market will decide the answer.

> Obviously, BT would be like "--" and DN would be "/". But how about SK
> and AR?

Not sure whether my previous reply on this subject made it into the system,
but as another VE, I wouldn't kick you out either. Our VE team wants to
know whether you can copy Morse (yourself), and _how_ you do it is pretty
much up to you. We don't have a computer at the exam session, so anybody
wanting to use one would have to bring their own...if you wanna engrave it
on stone, bring your own rock.

We're accommodating for handicaps and for personal preferences in taking
the test, but we do expect you to copy it; that's one of the reasons we use
the fill-in-the-blanks code test rather than the "multiple guess" version.

Actually, in most cases an examinee can pass the exam without having to
distinguish among AR, SK, BT and DN, both on the written test and for the
one-minute solid copy. And I'd accept a typed "AR" or "SK" (that's what I
write when I'm copying code myself).

I'll let that argument die of it's own accord, but will make one comment:

Yes, clothing has it's purposes but there are many situations in which the
wearing of clothing serves no real purpose other than reinforce a false
sense of modesty such as when swimming, sunbathing, kicking back to enjoy
a beer, etc. Everyone has seen a nude body at least once before, and
many people have discovered that "the prevailing esthetic" has no real
benefit to society other than to to protect the overly-squeamish.

Most of you probably already know this, but the commas in this posted
request serve the same funtion as our decimal points. So they are *not* looking
for XTALs in the GHZ range...

1717. Hawaiian 2m repeaters?

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-17 22:09:44 UTC
From: jjhanso1@students.wisc.edu
Message-ID: <jjhanso1.219.2D63EB23@students.wisc.edu>
Source record: 270919

I'll be in Hawaii (on Maui and in Honolulu) from March 25-April 6 and was wondering if anyone could provide some advice as to good 2m repeaters...

Yes, I have a rptr directory, but I was hoping for more specific advice.

Thanks!

hi, guys:

I recently purchase a ALINCO DJ-580, it is a great radio. The quality of audio is great. I have no complaint about this rig.
I got one question here, the menu stated the receive range for UHF is from 430 to 470 Mhz, but what I found is that I can make it from 400 to 520 Mhz. I didn't make any modification on this rig, I don't know this is misinformed on menu? or .....
Any answer will be appreciated!!

PS. I don't have call-sign yet, just pass the test last week.

:
Although correct that some countries would ban nude QSL cards, you will find
that countries banning the card are relatively few. Not all countries
are as "Prudish" as this country about nudity.

Nude cards do exist, I've gotten some from Japan. QSLs of this sort
usually get answered more quickly........

ZCZC AE08
QST de W1AW
DX Bulletin 10 ARLD010
>From ARRL Headquarters
Newington CT February 17, 1994
To all radio amateurs

SB DX ARL ARLD010
ARLD010 DX news

The items in this week's bulletin are courtesy of Chod, VP2ML; Bruce, WA1G; WD4IEH; Dick, K3DI; and the Ohio/Penn and Yankee Clipper Contest Club DX PacketCluster networks. Thanks.

GUINEA BISSAU. Erik, SM0AGD, will be in J5-land during late February, and hopes to be able to do some operating. Erik last operated J5 in 1980. QSL via SM0AGD, Vestag 27, 19556 Marsta, Sweden.

SOUTHERN COOK ISLANDS. Seven Glen Canyon Wireless Association members will be on from Rarotonga between March 4 and 10. They plan to be active in the ARRL SSB DX Contest as ZK1AVY.

WALVIS BAY. Ian, ZS9A, is on 160 meters just before his sunrise. Check 1815 kHz around 0400z.

CAMBODIA. Sanyi, XU7VK, has been heard on 3522 kHz at 1524z, 7009 kHz at 1700z and on 14083 kHz RTT
through the end of February.

DESECHEO ISLAND. According to Ray, AB4JI, the upcoming DXpedition for the SSB weekend of the ARRL International DX Contest has been cancelled. The U.S. Fish and Wildlife Service has denied landing permission because a group of Haitian squatters are on the island. The Coast Guard was unsuccessful in removing them, and reports are that the U.S. Navy may be called to remove the group. Until this situation is resolved, no landing permission can be given. AB4JI and crew hope to make last minute arrangements to operate from another island.

BELIZE. WB5B and WA5TKC will be signing V31BW and V31PP respectively, from February 19 to March 12. V31BW will operate primarily CW on 160 through 10 meters from South Water Caye, NA-080. V31PP will be located in the rain forest area near Blue Creek, and will operate 80 through 10 meters with SSB and RTT
active in both ARRL DX Contests and the CQ WW 160 Meter Contest.

QSL via their home calls.

ZAMBIA. DL7VTM, DG9WYL and DL7VLA will sign 9I2Z, 9I2M and 9I2A respectively, during their planned three week operation. They expect to be on the air around March 14. Listen for them on all bands and possibly for some satellite activity. It is believed that this may be the first satellite operation from Zambia. QSL via DL7VRO.

CQ ZONE 2. VE1CBK, of CY0SAB fame, and VE3YYR will be active from February 22 to 28. Listen for them in the CQ WW 160 Meter Contest the weekend of February 26 and 27. Before the contest they will be working all bands, mainly with RTT
RS-12. QSL via VE3YYR.

BAHAMAS. Dick, K3DI, will be signing C6AHL from Treasure Cay, Great Abaco, during the ARRL International DX Contest. This will be an all band, single op effort. He may even operate some QRP, conditions permitting. QSL via K3DI.

THIS WEEKEND ON THE RADIO. The CW weekend of the annual ARRL International DX Contest is a 48 hour event starting at 0000z February 19. W/VE stations work amateurs in as many DXCC countries as possible. DX stations work W/VE stations. W/VE stations send signal report and state/province. DX stations sent signal report and three digit number indicating transmitter output power. For full information and contest rules, check page 125 of December QST

Some island invasions planned for the contest include PS0F by W9VA, VP2E/WJ2O; VP5B by K9IMM, GD0SLY by WA3CGE; V31TP by WC0W; and V31WW by a team.

1721. Coax minimum-loss impeance

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-18 00:29:26 UTC
From: tomb@lsid.hp.com
Message-ID: <CLE9D2.9Jo@hpcvsnz.cv.hp.com>
Source record: 270923

Over on sci.electronics, someone was asking about how we
came to 50 ohms as common for coax impedance. I posted
the appended followup after some interesting calcs that
I had not seen previously: I'd seen the "77 ohms for
min loss" thing, but not the effects of dielectric noted
here, and I thought folk here might be interested:

==========

Subject: Re: History of 50 ohms standard?
Newsgroups: sci.electronics

Richard Karlquist (rkarlqu@scd.hp.com) wrote:
: In article <CLBvpK.7q4@odin.corp.sgi.com>,
: Dave Chengson <chengson@chengson.mti.sgi.com> wrote:
: >Does anyone know the background/history of where 50 ohms came from?
: >Its been suggested that it came from WWII from the antenna folks
: >and it is rumored it was a relatively arbitrary impedance value.

: I believe this is discussed in the MIT Rad Lab books.
: With air dielectric, 74 ohms gives the minimum loss for a given
: outer diameter. 35 ohms give the highest power handling capability
: assuming air breakdown is the limiting factor. 50 ohms is a compromise
: about half way in between.

I remembered it as 77 ohms for the minimum loss, and just went thru
the calcs to figure it out. Turned out to be 76.708 ohms ;-)
Now this is interesting, because it turned out to depend only on
the ratio of inner to outer diameter, and expressed that way, was
independent of dielectric, under the assumption that dielectric
losses are negligible, which should be the case for practical
coax cables at HF frequencies. I might add that this also assumes
perfect surface conditions on the round (not stranded) conductors.

OK, carrying this one step further, the outer-diameter/inner-diameter
ratio for min loss under these conditions is 3.59112:1. With air
dielectric, this is the 77 ohm cable. But if the dielectric is
polyethelene, commonly used in WWII vintage cables, the impedance
is ... 51.02 ohms! By the way, doing the same thing for solid
Teflon gives 52.9 ohms, still really close to 50.

For those interested in the calcs:
Zo=60*ln(D/d) / (e^.5)

where
Zo is characteristic impedance of coaxial line
D is inner diameter of outer conductor

d is outer diameter of inner conductor
e is dielectric constant of insulation

A100 = 4.34 * Rt / Zo + 2.78*f*Fp*(e^.5)

where
A100 is dB attenuation for 100 feet of line
Rt is total effective resistance at operating freq
f is operating frequency
Fp is power factor of dielectric at frequency f
(and the second term is generally negligible at HF,
leaving 4.34*Rt/Zo, for practical insulations.
Dissipation in the insulation favors lower impedance
since the loss goes down with voltage)

Rt = .1 * f^.5 * (1/d + 1/D)

You can reduce this: let D/d = x, then

A100*D/(7.233E-3*(e*f)^.5) = (x + 1) / ln(x)

For a constant D, e and f, you want to minimize the right side for
minimum attenuation. That leads to the D/d mentioned above.
Substitute e=1 into the Zo formula for air; e=2.26 for polyethelene,
and e=2.10 for teflon.

The problem is, I think I'd be concerned with buying any more products from
Ramsey. After all, if I had any problems, he might bad-mouth me all over the
place too. It is bad business and really just plain unneccesary. Jeff appears
to be a very nice guy for not filing a slander suit, especially given the
ample evidence.

When I was over there in Sept. about 2 years ago, I didn't hear much
repeater activity on 2 meters at all. I visited Big Island and Oahu.
I did find some highly unusual activity on 2 meter simplex in Honolulu.
Be sure to scan the whole band for this stuff.

Most QSL managers do it for the love of the hobby. You really have to hand it to them -- it's an awful lot of time and effort that could be spent working your own DX.

F6FNU charges $2 per card which is twice the normal one "green stamp" contribution. If you send $1 he replies via the bureau, which is essentially free. Apparently he makes around $1 per QSL.

: that the US FCC has put actual numbers on required performance (sounds
: like an improvement on our requirements, to me). So, just from personal
: curiosity, what are the consequences to an amateur who puts a radio on
: the air that does not meet the FCC specs ?

As a practical matter, the FCC would likely never find out unless you
had an interference complaint, and probably not even then. In the
unlikely event that FCC came to your shack with a power attenuator
and spectrum analyzer and found your rig out of spec, you would
receive a notice of violation with the requirement to correct
the illegal condition and respond in writing within XX days.

In the case of interference, you would probably also be ordered
off the air until the problem was fixed.

On the other hand, there was recently a gentleman with a 1.25m repeater
who was fined lots of money for having a spur on a distress frequency.

I'd say it's just a matter of being a good citizen to care about spurious
emissions.

I stand corrected (77 vs. 74 ohms).

This is correct, technically, but my recollection of the MIT Rad
Labs book discussion was that 50 ohms was historically chosen in
relation to air coax, and the fact that it happened to be
minimum loss with polyethylene was a lucky accident. But my
memory or the Rad Lab books may be wrong on historical details.

Now for a follow up question: where did the idea for 92 ohm coax
come from?

It's possible, but restrictions on the type of traffic that can be
carried over ham radio make this less useful than one might think.
Prohibitions that affect this include no business traffic and no
obscene or indecent language. Since there's no telling what will
come in over the net, it's not a good idea to do this unless you have
someone else providing tight control over what is forwarded through.

A cellphone doesn't have these restrictions.

I'm not familiar with either the VFO or doubler design, but how about this idea: Build another VFO, but with all the frequency-determining coils and capacitors 1/2 the value. You would end up with a VFO that tunes 14-14.6, assuming the 40 meter version tunes 7-7.3. You could reduce the tuning capacitor size even further (i.e. make it about 1/4 the size instead of 1/2) to reduce the tuning range.

Subject: Moving to Texas

I am packing to move to Texas. Please discontinue all feed to pro-sat and
delete my map from the network. I will reconnect feeds after I get settled
in Texas. I will probably go through crash as bill blue has the only 9600
HST modems that mine works with. It has been fun and look forward to
getting connected back on the network soon.

Again thanks for all the help and assistance in the past 10 years that
pro-sat, pro-mercury and T-Net La Mesa has operated from this phone number.
Thanks for all the wonderful pro-line software support and bill and
morgans tireless assistance.

See you soon........Wendell

->ARRL couldn't get their kit to work! So we sent them an assembled unit.
-I do not know how you read this, but to me it looks like bad news for
-buildability of Ramsey Kits. And now imagine an average John Q. Ham
-with a 200 watt soldering gun and acid core solder. :)

Apparantly, Ramsey will be losing the 2 meter kit business very soon. Ten Tec
has a 2M kit for $195 (available in May) that not only includes a 5 watt 2M
radio, expandable to 35W on the board and the case, but a *complete*
micro-driven front panel with frequency readout, memories, and a tuning knob in
5kc clicks. No more diodes, and only $20 more than Ramsey ($150 for the radio
and $25 for the 'optional' case.

Why do I feel that Ten Tec is more likely to make kits that will work, meet
FCC spec, and not thump when the squelch closes?

In article <CLAFwp.J8C@cup.hp.com> jholly@cup.hp.com (Jim Hollenback) writes:
-No, I don't think your out of place. Would one send a nude QSL to a foreign
-country? I certainly hope not. What sort of image are you presenting for the
-U.S.?

First of all, the discussion concerns QSL cards for special event stations commemorating National Nude Week. Having a naturist scene on the card - note, not pornography - doesn't sound too unusual. As for the image, remember that most of the world does not have the hangups about nudity that seems to be common here in the US.

As far as the envelope issue goes, I prefer to get QSLs in envelopes, since they are less likely to get trashed (or stamped/printed on) by the Post Office.

When I work the special event station, I will send a SASE to help with the cost of the envelope and postage.

1737. San Diego Ham

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-18 04:50:16 UTC
From: novotny@nosc.mil
Message-ID: <1994Feb18.045016.10165@nosc.mil>
Source record: 270839

Since there was a lot of interest in this a few months back, I thought I'd post this for the rest of the net. This was the lead article in Tom Blair's column in the February 17, 1994 edition of the San Diego Union-Tribune.

"In a new bit of tension between the Board of Supervisors and Sheriff Jim Roache, the board refused Tuesday to accept a gift to the Sheriff's Dept. and told the sheriff to return it. the gift: a portable ham radio used last August by a back-country bicyclist, Chris Boyer, to summon help for a seriously injured friend. After sheriff's deputies responded to the emergency call, they told Boyer he had violated FCC rules by using restricted emergency frequencies and ordered him to surrender the improperly altered radio to them and the FCC. To avoid further hassle, Boyer signed the radio over to the department as a gift. But the supervisors, who honored Boyer in December as a good Samaritan, said no thanks this week. They urged the sheriff to return the radio to Boyer."

Source record: 270840

I have been a ham for a long time, and have gone to nudist beaches, colonies, and resorts on occasion. My experience indicates that hams are no uglier than those who take it all off at these places. As a matter of what I have observed, the attendees at "naturist" places are less attractive than the general population (myself excepted of course).

Going to a ham club meeting alone is more pleasant than going to a nudist resort alone; single people are looked at with some suspicion.

After the change of callsigns in (East) Germany I don't know
whether my callsign is noticed with the correct address or not
in the international part of the CallBook
and whether my old callsign Y32JK is still included.

If you have a new 1994 CallBook - please be so kind and
tell me the address for my calls DL5ATP and Y32JK.

Thank you in advance.

Alan Bloom (alanb@sr.hp.com) wrote:
: asirene@ntuvax.ntu.ac.sg (asirene@ntuvax.ntu.ac.sg) wrote:

: I'm not familiar with either the VFO or doubler design, but how about
: this idea: Build another VFO, but with all the frequency-determining
: coils and capacitors 1/2 the value. You would end up with a VFO that
: tunes 14-14.6, assuming the 40 meter version tunes 7-7.3. You could
: reduce the tuning capacitor size even further (i.e. make it about 1/4
: the size instead of 1/2) to reduce the tuning range.

That is a solution, but does not take into account how the transistor acts
versus the frequency.
The idea behind a frequency multiplier is the same as a class C amplifier.
I mean, you take the output from the VCO, and feed it into a small-signal
class C (typically a transistor with emm. grounded, or better a FET, because
FET are known to show only quadratic behaviour), whose output is connected to
a parallel LC network (or ceramic filter, or whatever) tuned at the second
harmonic. That should give you a neat output.

Greater than 2 MeV Electron Fluence for 17 FEB is: 4.1E+08

SYNOPSIS OF ACT

Solar activity was low. A C1 x-ray event occurred at
17/1111Z which was optically uncorrelated. A new region was
assigned today as Region 7673 (N06W48).

Solar activity forecast: solar activity is expected to be
low.

The geomagnetic field has been at quiet to unsettled
levels for the past 24 hours at mid-latitudes. Some active
conditions were experienced at high-latitudes during the

period.

Geophysical activity forecast: the geomagnetic field is
expected to be active the first day of the forecast. This is
due to the passage of a coronal hole. The second day of the
forecast should be unsettled to active with unsettled conditions
at the end of the period.

Event probabilities 18 feb-20 feb

Class M 10/10/10
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 18 feb-20 feb

A. Middle Latitudes
Active 30/25/20
Minor Storm 25/15/10
Major-Severe Storm 05/05/01

B. High Latitudes
Active 30/25/25
Minor Storm 30/15/15
Major-Severe Storm 05/05/05

HF propagation conditions were near-normal for low and
middle latitude paths. High and polar latitude paths also
showed near-normal propagation except during the local night
sectors where residual degradation continues to sporadically
linger. Conditions may become slightly more unstable on 18 or
19 February due to effects from the above-noted coronal hole.

---
NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep

V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

HF-FAX LIST

by Marius Rensen

(CompuServe ID 100116,2632 FIDO 2:241/1045.12)
(Internet 100116.2632@compuserve.com)
Last Revised Feb. 1994

(Times in UTC)

This listing contains all Fax stations worldwide, transmitting on
different frequencies (LF-MF-HF) weather-charts, Satellite-
pictures and Press-text/pictures.

Corrections and additions to this listing would be welcome.

Many thanks to all, who send me corrections for the list.

Marius

==========

Note: Weather faxes are sent most with an (I)ndex (O)f (C)orrelation
(IOC) of 576, and with (L)ines (P)er (M)inute (LPM) of 120.(the most
CIS stations use also 60 and 90 LPM).
Press faxes are most send with a IOC of 352 and a LPM of 60 (negat.!)

Technical specifications for F3C (example 120/576 on HF):

Class of emission: F3C
Bandwith (f0=1900 Hz): White +400 Hz (f0+400 Hz = 2300 Hz)
Black -400 Hz (f0-400 Hz = 1500 Hz)
(Low freq. (30-300 kHz f0+-150 Hz)
Index of correlation: 576
Drum speed (LPM): 120
Scanning Line Density: 3.8 lines/mm
Scanning frequency: 120 lines/minute
Start signals: Carrier modulated by 300 Hz for 5 seconds
Phasing signal: BLACK signal interrupted by 1 WHITE phasing pulse
per revolution of the facsimile drum, transmitted
for at least 30 seconds prior to the transmission
of the chart.
Stop signals: Carrier modulated by 450 Hz for 5 seconds followed
by 10 seconds of BLACK signal.

The list shows the carrier frequencies, use for USB -1.9 kHz
use for LSB +1.9 kHZ

Here are a few stations send also text and pictures:

IARU Region 1 -> 3730-3740/7035-7045/14225-14235/21335-21345/28675-28685

Chart (UNID) indentification:

1- Find out the technical parameters (LPM/IOC), only stations working
with Russian equipment using LPM 90, that are normally CIS stations
or Ankara Meteo.

2- If the station transmitting in LSB/288/352 (negativ) and LPM 60 it is
normally a Press photo station ie 60/352 or 60/288

3- Look in the corner of the chart for a indentification (4) number.
The first two numbers is the orginating center indicator (distributed
the chart).

01-09 WMCs: 01-03 Melbourne; 04-06 Moscow; 07-09 Washington.

10-25 AFRICA: 10+11 Cairo; 12+13 Dakar; 14+15 Nairobi; 16+17
Antanarivo 18+19 Tunis; 20 LasPalmas; 21 El Djazair;
22+23 Lagos

26-40 ASIA: 26+27 Khabarovsk; 28+29 Delhi; 30+31 Novosibirsk; 32+33
Tashkent; 34+35 Tokyo; 36 Bangkok; 37 Ulan Bator; 38+39
Beijing.

41-50 S.AMERICA: 41+42 Buenos Aires; 43+44 Brasilia; 45 Santiago.

51-63 N+C AMERICA: 51+52 Miami; 53+54 Montreal; 55 San Francisco; 56
Washington.

64-73 PACIFIC: 64 Honolulu; 65+66 Darwin; 67+68 Melbourne; 69+70
Wellington.

74-98 EUROPE: 74+75 Bracknell; 76+77 Moscow; 78+79 Offenbach;
80+81 Rome; 82+83 Norrkoeping; 84+85 Paris; 86 Helsinki;
87 Belgrade; 88 Oslo; 89 Prague; 90 Episkopi; 91 Ankara;
92 Frankfurt; 93 London; 94 Copenhagen; 95 Rota;
96 Athens

The last two numbers is the serial chart number by that center.

Example: 9220 92= WAFC Frankfurt (EDZW) serial number 20
6411 64= RAFC Honolulu serial number 11

Note: some stations using 5 numbers, than take the last four numbers.

4- Look for a four letter location indicator.

ADDN Darwin; AMMC Melbourne; BABJ Beijing; DEMS Delhi; EDZW Offenbach;
EGRR Bracknell; EKMI Danish Met; FAPR Pretoria; FMEE Saint Denis;
GOOY Dakar; HECA Cairo; HKNC Nairobi; KWBC Washington;KGWC Offut (USAF);
LEMM Madrid; LERT Rota; LFPW Toulouse; LIIB Roma; LTAA; Ankara; OKPR
Praque; RJTD Tokyo; RKSL Seoul; RUHB Khabarovsk; RUMS Moscow; RUNW Novo-
sibirsk; RUTK Tashkent; SABM Buenos Aires; UKBB Kiyev; VTBB Bangkok.

In article <2k0u9l$bj9@jethro.Corp.Sun.COM>, ruentien@maverick.Corp.Sun.COM (Ruentien Lu) writes:
|> hi, guys:
|>
|> I recently purchase a ALINCO DJ-580, it is a great radio. The quality of audio is great. I have no complaint about this rig.
|> I got one question here, the menu stated the receive range for UHF is from 430 to 470 Mhz, but what I found is that I can make it from 400 to 520 Mhz. I didn't make any modification on this rig, I don't know this is misinformed on menu? or .....
|> Any answer will be appreciated!!
|>
|>
|> PS. I don't have call-sign yet, just pass the test last week.
|>

It will DISPLAY up to 520, but you will note that after about 487 the decimal point disappears, meaning that the PLL will not lock and you will not actually receive anything. It will also display down to 810 but will not lock below about 860. The 487 and 860 numbers depend on the individual radio, but that is what mine does. Bye...

There is a Sigma Design Comapny in Fremont, California. Don't know if this
is the same one you are looking for. Try directory assistance for Fremont, CA.
I believe the area code is (510).

1750. Jeff Gold

Newsgroup: rec.radio.amateur.misc

"Well I will say it flat out:" Jeff Gold "is a liar. I caught him at it first hand and won't" read any more of his magazine articles. Everything in quotes is from Jeff's posting to the subject of John Ramsey.

In the first paragraph of his recent magazine article he tells us that there is something "magical" about ham radio. That's a lie, Jeff. It is all simple physics.

He also says that every one of the radios he built has given him pleasure. Then in his Internet posting he talks about getting mad, experiencing difficulties, and problems with the FTR-146. One of those statements is a lie.

Don't anybody bother responding to this ridiculous posting... just wanted Jeff to see what it's like to be treated the way he treats others.

The Magical Devil made me do it. Cecil, kg7bk@indirect.com

1751. Re: Nude amateur radio clubs

Newsgroup: rec.radio.amateur.misc

Well, after all is said and done... I still think Americans place too much emphasis on visuals. Too bad all of us can't have that perfect BOD for you guys and gals to lust after.

I recall, in the seventies, there was a psychology professor ... I think at Berekley , who insisted his classes meet in the nude. It had something to do with what he called "total honesty". (snicker)

However.. I really don't think the public should equate bare loins with sex. I know that nudity is much better accepted in more mature cultures. Especially, in Europe. But, then again many Amazon people don't see the need for clothes either from a practical or social point of reference.

By the way there was a student at Berekley who insisted on going to class nude. I understand he was not stopped until a female feminist group claimed sexual harrassment.
I also heard the biggest objection to "the nude guy" was people didn't want to sit in a chair after he got up. (perhaps this was a good idea)
It was Not a good enough reason to throw the "lad" in jail.
I think he was trying to prove a social point: American's are very nervous and inhibited about theirs and other peoples nude bodies.

As far as nude QSLs ... I got the one from Japan a couple of years ago. It was quite a conversation piece. Others wanted to work him so perhaps the QSL may have generated a pile-up. (sniker)

Well, folks get to know your body better.. even those parts called privates. Ain't nothin dirty about em... the good lord gave em to you to treat with respect, not distain.

A would-be bufferew-
WQ1F

" What did you do for fun last summer?"

Alan Bloom (alanb@sr.hp.com) wrote:

: As a practical matter, the FCC would likely never find out unless you
: had an interference complaint, and probably not even then. AL N1AL

When I was in college, I had a Heathkit am/cw transmitter and vfo that was all mode... AM and FM at the same time. I used it for years and the only complaints I got was from fellow hams. Found out later that it was illegal.

I doubt that the difference between spurious emissions of -50db and -48db can even be detected by monitoring the radiated signal. If my math is right, for a 5 watt fundamental signal from the FX-146, that -50db to -48db difference is 0.00003 watt. It's not in the same league as a kw on 11m. It's more like driving 57 mph.

73, Cecil, kg7bk@indirect.com

Really?! I've built Heathkits from the original oscilloscope and AT-1 transmitter right up through their kit 2-m HT, and had _very_ few problems that weren't my own stupidity (back in the '50's I was known to make a cold solder joint occasionally). Think I had one bad relay in my HW-100 that they promptly replaced, can't recall any other problems in well over twenty kits.

Only built one Ramsey kit, their 40-m qrp transmitter. Very simple circuit, but it doesn't work. (Oscillator stage is okay, but the final doesn't amplify.) Haven't had a chance to troubleshoot it yet, so can't rule out my own stupidity, but Ramsey doesn't have a good track record with me.

It is actually more like a sharp click; even with the volume turned
down it is quite loud. I've heard a rumor that Ramsey has a fix for
this; possibly Ramsey would like to post a list of mods and fixes
to rec.radio.amateur.homebrew, or put the list (and the actual
mod files?) on an ftp server somewhere. This would save the
Internet folks the cost of a phone call to New York...

I have no idea what help someone could get from a program, that is not the point.

My problem is that this is somewhat like the reasoning that led up to the Challenger disaster.

The need is not to show that someone *is* or *could* cheat, but for them to prove that they *could not* cheat.. If you want to use some piece of equipment in a testing session *you* must show that (a) you are not using it to cheat and (b) it won't disturb the other test takers.

Showing an empty hard drive or none at all is one very easy way to do this. Certainly there are other waysto do this. Remember the onus in not on the VEs to try to anticipate every possible way for someone to cheat, but to ensure fair tests

: in quotes is from Jeff's posting to the subject of John Ramsey.

what exactly is that "Jeff Gold" in there for?

: In the first paragraph of his recent magazine article he tells us that
: there is something "magical" about ham radio. That's a lie, Jeff. It is
: all simple physics.

The physics of ham radio are purely physics. But how about the allure and
people's sustained interest? Seems pretty magical to me.

: He also says that every one of the radios he built has given him pleasure.
: Then in his Internet posting he talks about getting mad, experiencing
: difficulties, and problems with the FTR-146. One of those statements is a
: lie.

Help me out here. what's wrong with this? Everybody eventually feels
pleasure if he/she can eventually get a project to work. Now this is the
key. If I bought a (older) Ramsey kit--I'd probably be frustrated as
hell not being to assemble it. I'm a natural science (note not
engineering) major and probably wouldn't have a clue how to get things
to work if they weren't spelled out. I'd probably call to complain--and
I don't want to know how that'd turn out. (OK so I lied here--I'm taking
electric/electronic network courses here [partially for this interest]
and MIGHT be able to get a professor to help out--or maybe a fellow ham
here) But buy something given a certain set of expectations (said or
implied by the seller), you will get mad, frustrated, and experience
difficulties and problems if the expectations aren't met.

: Don't anybody bother responding to this ridiculous posting... just wanted
: Jeff to see what it's like to be treated the way he treats others.

Well, at least you didn't use the anon server.

: The Magical Devil made me do it. Cecil, kg7bk@indirect.com

At the moment, I wouldn't buy any of Ramsey's kits--I do believe that
half of business is selling yourself. And from what I've seen posted
on this group, he doesn't sell himself very well. Until netwisdom
speaks better of Ramsey, I'll be wary.

Information was posted on the Southeastern U.S.A. DX Packet
Cluster system last nite that if true is a most disturbing
occurrence.

The posting stated that the Voice of America had reported
that ** all ** radio amateurs in the The Peoples Republic
of China (Radio Prefix BY) had been placed in labor camps.

Does anyone have verification and/or further details of
this situation?

Does the VOA post any news scripts to any Internet locations?

Some amateurs noted that there had been a recent lack of
activity from PRC amateurs but had attributed this to
poor propagation.

If the information proves to be true, I urge you to protest
this action by calls or letters to the PRC Embassy in
your country.

The reported reason fr the action by the way was that all
PRC amateurs "had been monitoring unauthorized frequencies".

I've looked at your design. It's certainly simple for the performance
it promises, but I doubt you could sell it for under $100 per end with
ham market size volumes. The DSY modem kit is not very different in
complexity, yet GRAPES can't sell it that cheap. I believe you probably
mean that a good scrounger could gather the parts that cheap. If you
can offer a kit for $100 per end, I'll take two right away. I have a
one mile through-the-trees link I need to make right now. A pair of
Wavelan cards feeding Down East loop yagis won't make it, but 100 mw
HTs at 70 cm make it fine, as can a pair of GRAPES 56kb modens feeding
70 cm transverters (but I can't do that because I need them for another
link). BTW, a BER better than 1 in 10^6 is no problem with the DSY design
with 1.0 microvolt of signal into the modem.

Well sure, pure line of sight definitely makes things better, witness
TVRO systems that make 22,500 miles on 50 watts or less. However, we
don't get that kind of performance out of our terrestrial TV links.
First of all, the bandwidth required for our TV links isn't 6 MHz,
it's 30 MHz, because we use FM video. Of course the FM enhancement
effect mitigates that somewhat. And second, we rarely have pure line
of sight. Finally, the bulk of the path loss occurs in the first
mile, 119.27 db at 13 GHz. After that the incremental losses are
rather small, another 3 db for every doubling of distance.

Our experience with setting up ad hoc terrestrial links with our news
vans is that the portables with 100 mw and 2 foot dishes shouldn't be
counted on beyond 2 miles. A carefully engineered LOS path between two
high sites does better, of course. We have one full time path at 24 GHz
that is 7 miles. It was solid with 2 foot dishes except when it was raining
hard, with 8 foot dishes it's solid even in the heaviest cloudbursts.
Our longest engineered path is 50 miles, using a 6 foot dish at one
end, and an 8 footer at the other, running 10 watts at 7 GHz, from a
1,000 foot tower to a 2370 foot mountain. Even that path fades in
heavy rain.

Note that over a perfectly smooth Earth, LOS is only 38.72 miles
for a dish 1,000 feet HAAT. For the typical van mast, or ham tower,
of 40 feet, LOS is only 7.745 miles. (Double those numbers for a
grazing path to another site of the same HAAT.) When we add in real
obstacles like 40-1000 foot buildings, 100 foot trees, etc, it gets much
worse. And to avoid the first Fresnel zone, we need to clear an obstacle
at the mid-point of the path by 30.96 feet. That's not going to happen
even over smooth Earth at a distance greater than 3.87 miles with
a 40 foot mast. So pure LOS is pretty much a mountaintop to mountaintop
affair for longer distances.

> While it's true that you would need line-of-sight, I think most
>practical installations of a lower frequency system also incur
>15-40 dB incremental path loss once they leave LOS conditions and
>for higher information rate transmission effectively need LOS in order
>to stay economic.

Well lets look at a 219 MHz system with a 11 db antenna at 40 feet
shooting to another system also with a HAAT of 40 feet and a 11 db
antenna. System power is 7 watts. That's 38.45 dbm plus 22 db of
antenna gain for a total link ERP of 60.45 dbm. We need 1 uV
across 50 ohms for a 1 in 10^6 BER at the receiver. That's 2*10^-14
watts, or -137 dbm. So we have a budget of 60.45-(-137)=197.45 db.

Assuming we want to stay out of first Fresnel, we have a total path length of 7.74 miles which has a free space path loss of 101.58 db. That gives us a margin of 95.87 db. Looks like we can easily tolerate 15-40 db of foliage and building loss in the path. For the same path, it looks like foliage losses at 10 GHz are about 30 db more, for a total of about 198 db at 10 GHz, or about 20 db below your system's noise floor worst case.

>Also, at high information rates, the additional multipath and path
>variability problems incurred by going to a non-LOS path make the UHF
>solution even less attractive since error correction, channel equalization
>and additional system margin may be required to guarantee data flow.

Ok. Lets take a look at beyond horizon signals. If we assume forward scatter for beyond horizon signals, and a 90 mile path, then we're looking at 194.89 db path loss at 219 MHz. At 10 GHz our path loss is now 296.51 db. (It's really silly to be quoting two decimal place precision here, the loss figures are only accurate to about +/- 10%) Anyway, it looks like a modest antenna improvement over the base 11 db shown in earlier figures will give us 1e-6 BER for a DSY modem over this path, but you'd need about 120 db more margin to make it. (Troposcatter loss figures interpolated from the 50% reliability line of fig 35, Chapter 24, _Reference Data for Radio Engineers_ 4th edition, free space path loss from my spreadsheet.)

Now back to the real world. We have a 90 mile 70 cm path between Sweat Mtn and Scaly Mtn that is not line of sight. It works with very few retries. We're using 19 db antennas on each end, and our mean HAAT is about 1300 feet, but with mountains taller than that in between. I won't claim that's typical. We've got another link that's only 21 miles, and line of sight, that doesn't work well. But one end is nestled in downtown buildings and suffers severe multipath (and desense from commercial equipment too). The tighter beamwidth of your system would probably be a win here.

To summarize, if we could depend on having LOS paths, a 10 GHz system would be ideal, but in the real world we probably can't afford the number of hops that would require (except in special terrain cases like the California coast with it's mountains overlooking the population areas), and 219 MHz calculations seem to show it will suffice using troposcatter over the much longer paths we are likely to need in our rolling terrain.

Well this isn't too theoretical an answer, but I suspect that it was developed
as a very low capacitance cable for use in connecting AM car radio antennas.
Since these use whips that a MUCH shorter than 1/4 wave they have very high
impedance and consequently connecting them to a feedline with lots of
capacitance loses lots of signal.

I think the important lesson to be learned from recent enforcement actions is that this model doesn't apply any more. This is an accurate statement of previous policy and practice, but not of the current practice. There will, in general, be no warning or prior notice, as mentioned here, to secure compliance. The first communication from the FCC will probably be the notice of apparent liability for monetary forfeiture (~$2K to ~$8K).

It seems fairly clear from the packet radio message content case and this recent case of the spur from the repeater that the emphasis has shifted away from securing compliance through education and guidance. The new emphasis is on enforcement through punishment and collection of fines^H^H^H^Hmonetary forfeitures.

The equipment owner and/or operator cannot rely on the certification of the manufacturer that the equipment would meet any requirement when operating properly to protect against being found liable for monetary forfeiture in the event of malfunction. The practical course is to undertake frequent, if not continuous, monitoring with the best spectrum analysis equipment available to see that all emissions actually are below current requirements. This is operationally the same requirement mentioned in the post from the UK - that there be no spurious emissions in operation.

The manufacturers' certification is _also_ necessary, and it is a separate violation for it to be lacking.

I had a MOV (Metal Oxide Varistor) in a "surge supressor" go bad. They
to into a partially-conducting mode, sorta like a SCR dimmer switch.

And some electronic ballast flourescent lights are really bad. We have
some Lights of America flourescent lights with FCC Part-15 tags.

MONDAY FEBRUARY 21, 1994

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It is published every week and is made available for unlimited distribution.

* OSCAR SKN BEST FISTS *
========================
Many thanks to all who participated in our 22nd Annual Straight Key Night on OSCAR, 1 January 1994. The following "Best Fist" nominations have been received: W1NU, WQ3Y and W6HDO. Although we didn't ask that logs be submitted, several participants also reported working AMSAT-NA's esteemed president, W3XO/5, in one of Bill's rare appearances on CW (PVRC members especially will appreciate the significance of this occasion). An "honorary" Best Fist nomination goes to you, Bill; let's hope that more SSB ops will follow your fine example, dust off their old pump handles, and enjoy the fun.

See you all next year!

[Info via Ray, W2RS]

* OSCAR-13 ZRO TEST SKED *
==========
The ZRO Memorial Technical Achievement Award Program, or just "ZRO Test" has a new schedule for February and March, 1994, via AMSAT-OSCAR-13. This activity is a test of operating skill and equipment performance.

During a typical ZRO run, a control station will send numeric code groups using CW at 10 words-per-minute. At the beginning of the run, uplink power from the control station is set to match the general beacon downlink strength. This is level "zero". The control operator will send and repeat a random five-digit number, then lower his uplink power by 3 dB (half power) and repeat the procedure with a new random number (level "1"). This will continue to a level 30 dB below the beacon (level "A").

A participating listener monitors the downlink signals till he can no longer copy the numbers. Those who can hear the beacon will qualify for the basic award by copying the code group heard at level "zero". The challenge is to improve home-station performance to a point where the lower-level downlink signals can be copied (levels 6 through A). To date, only one station (Darrel Emerson, AA7FV) has successfully copied level "A".

The following schedule of Mode "B" tests were chosen for convenient operating times and favorable squint angles. The tests can be heard on 145.840 MHz. Andy WA5ZIB will conduct all the tests. Mode "JL" tests will no longer occur due to the failure of AO-13's 70-cm transmitter.

Day Date (UTC) Time Areas covered

Sunday Feb. 20, 1994 0330 UTC NA, NW SA, Japan, Pacific
Saturday Feb. 26, 1994 1930 UTC NA, SA, Europe, Africa, ME
Saturday Mar. 19, 1994 1930 UTC NA, SA, Europe, Africa
Saturday Mar. 26, 1994 2315 UTC NA, SA

Note that the dates and days are shown in "UTC", thus the first test listed occurs at 9:30 PM CST Saturday night (the 19th). Any changes will be announced as soon as possible via the AMSAT HF and AO-13 Operations Nets.

All listener reports with date of test and numbers copied should be sent to Andy MacAllister WA5ZIB, AMSAT V.P. User Operations, 14714 Knights Way Drive, Houston, TX 77083-5640. A report will be returned verifying the level of accurate reception. An S.A.S.E. is appreciated but not required.

Information about the AMSAT Awards Program can be found on page 197 of the "Proceedings of the AMSAT-NA Tenth Space Symposium" (1992). This paper, covering all the AMSAT-NA awards including specifics on the ZRO Test, was reprinted on page 10 in the March/April 1993 issue of "The AMSAT Journal". The ZRO Test information provided in the article covers test procedures, means for obtaining certificates and gives some historical background

about the program. Reprints of the article can be obtained for an S.A.S.E. to WA5ZIB at the address above.

[Info via WA5ZIB]

* DISCOVERY-MIR RADIO LINK *
==========

The Space Shuttle Discovery's crew and the MIR Russian space station made an Amateur Radio contact on 08-Feb-94 during a period of time when Discovery was over the south Pacific and MIR was over the Caribbean.

"We fly during a lot of time with Sergej and I wish a good work with his North American collegues, and a not problems return to the Earth", said Valery Polyakov one of the MIR cosmonauts. "Thanks, I heard you perfect", replied Krikalev in Russian.

[Info via Gustavo, LW2DTZ of AMSAT-LU]

* AMSAT HF PBBS *
==========

WT0N-3 in St. Paul, MN, USA will be on 10.127 LSB (30 meters) Monday through Saturday from 1600 UTC until 23OO UTC. This station will carry all AMSAT bulletins and Keps. It will also carry other satellite related items such as "SpaceNews". This PBBS will be set up on 300 baud HF packet, but will also be available for AMTOR or PACTOR operations if there is a need to do so. At this time, the PBBS will be set up as an experiment and any comments and suggestions should be directed to the sysop, BJ Arts, WT0N, at any one of the following addresses:

PACKET: WT0N@WB0GDB.#STP.MN.USA.NOAM
INTERNET: BJARTS@STTHOMAS.EDU

[Info via WT0N]

* FO-20 SCHEDULE *
==========

The FO-20 command station announced that a slight malfunction in the onboard command system had been detected. As a result, analog mode operation arranged from 09-Feb-94 will be performed on schedule, but there is a possibility of interruption due to satellite ground station control.

The present schedule is as announced before:

Analog mode:
09-Feb-94 07:15 -to- 16-Feb-94 07:40 UTC
23-Feb-94 08:05 -to- 02-Mar-94 06:40 UTC
09-Mar-94 07:05 -to- 16-Mar-94 07:30 UTC
23-Mar-94 07:52 -to- 30-Mar-94 08:15 UTC

Digital mode: Unless otherwise noted above.

[Info via Kazu Sakamoto, JJ1WTK]

* THANKS! *
==========
Thanks to all those who sent QSL cards, letters, and messages of
appreciation regarding SpaceNews, especially:

The subject brings a whole new dimension to the phrase 'Have you got all my details' as heard in contests :-)

I bet the cards aren't as bad as some of the SSTV pictures often emanating from Italy.....

I am left handed but I normally send with my right hand, regardless of whether I am using a straight key or an iambic keyer. I can switch to my left hand if I want without having to rewire the keyer.

Having said that, on the rare occasion I get to use CW now, I tend to loaf along at <20wpm - perhaps at higher speed the left hand would go wrong.

Gary Coffman (gary@ke4zv.atl.ga.us) wrote:

: I've looked at your design. It's certainly simple for the performance
: it promises, but I doubt you could sell it for under $100 per end with
: ham market size volumes. The DSY modem kit is not very different in
: complexity, yet GRAPES can't sell it that cheap. I believe you probably
: mean that a good scrounger could gather the parts that cheap. If you
: can offer a kit for $100 per end, I'll take two right away. I have a

I'm definitely not an amateur manufacturing type but I greatly
appreciate the difficulty of producing (kitting is probably even worse)
almost anything of this type for sale. Process and production issues
are often a bigger task/cost than the original design itself. However,
from a complexity and parts count point of view, if one compares to
existing high volume hardware (we may already be out of the camp of
amateur radio) I think that lowcost microwave transceivers could be
built. As I've previously mentioned, another 10-20 dB of system
performance over the 10 GHz stuff at about the same cost/complexity I
showed is readily available should someone choose to go after it.

As I've also repeatedly said, the 10 GHz link was a "teaser" and never
even intended to be used for more than a demonstration. The fact that
people have built and used them is incidental. That design is certainly
not one I would choose to manufacture if I did choose to get into the
business.
I do believe that $100 h/w is a possibility given volume production
though. Existing automotive radar detectors are similar in complexity.
In fact some of them are probably considerably more complex.

: one mile through-the-trees link I need to make right now. A pair of
: Wavelan cards feeding Down East loop yagis won't make it, but 100 mw
: HTs at 70 cm make it fine, as can a pair of GRAPES 56kb modens feeding
: 70 cm transverters (but I can't do that because I need them for another
: link). BTW, a BER better than 1 in 10^6 is no problem with the DSY design
: with 1.0 microvolt of signal into the modem.

I think you really need to be careful to compare apples and apples. 100
mw HTs aren't anything close to the video bandwidths which I was
discussing. Also, with the narrower bandwidth and low data rate,
multipath distortion and the resulting intersymbol interference (or
phase distortion as it is sometimes called) isn't nearly so significant.
I think that a BER of better than 1e-6 may be difficult in many or most
non-LOS situations without error correction and/or channel equalization
(whether through brute force means or with spread spectrum). Even at
only GRAPES speeds this is an issue. I would point to the Ottowa
group's experiences and VE3JF's CNC article as a reference.

While the excess path loss degrades more slowly at lower frequencies
than at microwave I maintain that as soon as one gets into high
information transfer situations that multipath and path variation
cause similar difficulties and make indirect paths uneconomical or
impossible. When you have lots of margin to throw away (low data rates)
it does indeed appear that low frequencies win. When you start pushing
performance and high information transfer (lots of users over a wide
area) they fail badly, even before the consideration of sufficient
available spectrum is applied. I believe that this is the fundamental
reason that terrestrial radio links have all been at microwave. It
makes economic sense.

: Well sure, pure line of sight definitely makes things better, witness
: TVRO systems that make 22,500 miles on 50 watts or less. However, we
: don't get that kind of performance out of our terrestrial TV links.
: First of all, the bandwidth required for our TV links isn't 6 MHz,
: it's 30 MHz, because we use FM video. Of course the FM enhancement
: effect mitigates that somewhat. And second, we rarely have pure line

I used traditional TV bandwidths in my example because they were more
conservative/demanding. In using 6 MHz and 45 dB C/N instead of 35 MHz
and 13 dB C/N (or your favorite number near that for a TVRO system) I
was requiring about 25 dB *more* signal than a TVRO style system. If
you allow the TVRO system you can increase the previous estimated
distances by a factor of 16 or so.

: of sight. Finally, the bulk of the path loss occurs in the first
: mile, 119.27 db at 13 GHz. After that the incremental losses are
: rather small, another 3 db for every doubling of distance.

Wow! I stand corrected. Things must work differently where you are.
The darn signals drop 6 dB when you double the distance out here in
California. This happens every time you double it, the second mile or
the second hundred (or pretty close to it up through 10 GHz) as long as
you're LOS.

: a 40 foot mast. So pure LOS is pretty much a mountaintop to mountaintop
: affair for longer distances.

Yes it is unless a lot more path engineering is done than amateurs are
used to doing. However, if we are ever to get high information rate
systems we are going to *have* to pay attention to details. Once we do
this, those details will be made more economic as we use
microwave/millimeter (if all of amateur radio hasn't been scooped by
fiber by then) wavelengths.

: > While it's true that you would need line-of-sight, I think most
: >practical installations of a lower frequency system also incur
: >15-40 dB incremental path loss once they leave LOS conditions and
: >for higher information rate transmission effectively need LOS in order
: >to stay economic.

: Well lets look at a 219 MHz system with a 11 db antenna at 40 feet

I'm discussing higher speed systems. Links of the type required to
trunk a significant number of users with moderate to high bandwidth
applications across the US. 1 MHz at 219 is not going to be
able to support such without a tremendous amount of spacial reuse
which probably means antennas so large as to be impractical.

: That gives us a margin of 95.87 db. Looks like we can easily tolerate
: 15-40 db of foliage and building loss in the path. For the same path,
: it looks like foliage losses at 10 GHz are about 30 db more, for a
: total of about 198 db at 10 GHz, or about 20 db below your system's
: noise floor worst case.

Yes, if you don't need much performance you can use lower frequencies,
you can lose a lot of the *potential* performance and still function.
For that matter you can run 60 wpm rtty on HF across great distances if
that's your goal.

My point is that once you try to get economical performance at high
information rates you can't afford to throw away power into poorly
engineered paths and that the economics greatly favor microwave over vhf
for wireless systems.

: >Also, at high information rates, the additional multipath and path :
: >variability problems incurred by going to a non-LOS path make the UHF :
: >solution even less attractive since error correction, channel equalization
: >and additional system margin may be required to guarantee data flow.

: Ok. Lets take a look at beyond horizon signals. If we assume forward

Let's not. Once you've done that you have thrown away so much system
capability that it is beyond amateur resources. I don't think
most of us are ready to install multi-killiwatt troposcatter systems
of the kind the military used at low vhf to island hop in the Pacific.
And that's about what it takes if you are talking about medium speed
information (though I suspect the military stuff was more or less audio
bandwidths).

If you did consider long haul, I suspect that microwave might do
better than many expect. During the 10GHz over-land DX record tests we
did a few years ago, both the strongest and the most reliable signals
heard across the 415 mile path were at 10 GHz. They were the strongest
when the ducting occurred and they were the most reliable in that the 1
watt into a *30 inch* diameter antenna was always copiable via
troposcatter. This was true even though we had liaison on 40M SSB, 144
MHz (1/4 KW and long yagis each end) and 432 MHz. However,neither of those
propagation mechanisms is one I would want to consider for high rate
information transfer.

: Now back to the real world. We have a 90 mile 70 cm path between Sweat
: Mtn and Scaly Mtn that is not line of sight. It works with very few
: retries. We're using 19 db antennas on each end, and our mean HAAT is
: about 1300 feet, but with mountains taller than that in between. I won't
: claim that's typical. We've got another link that's only 21 miles,
: and line of sight, that doesn't work well. But one end is nestled

: in downtown buildings and suffers severe multipath (and desense from
: commercial equipment too). The tighter beamwidth of your system would
: probably be a win here.

Your second 21 mile link obviously *isn't* LOS!
Local clutter is probably degrading things severely.
Antennas help a lot (2 dB of system improvement per dB of antenna gain)
but a poor path degrades things much faster than antennas can fix it.
That "nestled end" that you call line-of-sight is clearly far from it.
See my comment above about most practical links losing 15-40 dB as
soon as they leave LOS. Your link is probably an example of this.

: To summarize, if we could depend on having LOS paths, a 10 GHz system
: would be ideal, but in the real world we probably can't afford the
: number of hops that would require (except in special terrain cases
: like the California coast with it's mountains overlooking the population
: areas), and 219 MHz calculations seem to show it will suffice using
: troposcatter over the much longer paths we are likely to need in our
: rolling terrain.

If we are willing to settle for low information rate to each user I
agree. However, if we are considering medium speed or greater, as
defined by the industry, culture and available systems, and if we are
considering more than a single or a few users, 219 MHz capacity isn't
going to come close to being enough to interest hams and potential
hams in "investing". Even now it is difficult to convince people
that ham radio is neat for information age services when a 14.4 kbps
or 28.8 kbps modem is so cheap and provides so much performance
to the user compared to anything AR has to offer.

1772. rsgb gb2rs news 20th feb

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-18 20:44:00 UTC
From: ted@tedb.demon.co.uk
Message-ID: <761604240snz@tedb.demon.co.uk>
Source record: 270874
Cross-posted to: rec.radio.amateur.misc,uk.radio.amateur

Good morning. It's Sunday the 20th of February and here is the GB2RS news broadcast, prepared by the Radio Society of Great Britain.

First the headlines:- Today's RSGB VHF Convention; The Trafford Rally; The VHF Round Table; Arfon Repeater Update; Closedown of Repeater GB3NA; New RLOs for the Isle of Man and Lothian areas; Dates for next year's rallies and events required urgently; Morecambe Bay amateur wins Silver Trophy.

Today sees the premier event in the VHF Calendar, the RSGB VHF Convention, held at Sandown Race Course, Esher, Surrey. Doors open at 10.30am and the convention features a trade exhibition and a lecture programme featuring VHF, UHF and Microwaves, starting at 2.15pm. The February edition of RadCom carries full details of the event including a list of lectures. Refreshments will be available from 11am and talk-in is on channels S22 and SU22 by GB2VHF.

Also today, the Trafford rally takes place at Manchester. More details of this later in our bulletin.

A VHF 'Round Table' meeting is scheduled for Sunday the 10th of April at the British Telecom Laboratories, Martlesham Heath, Ipswich. Comprehensive measuring and test equipment will be available and there will be the usual technical workshops and talks. Entrance to the meeting will be strictly by ticket only, but these are free and are available from Darren Hatcher, G7BKO, BT Computer Centre, Bibb Way, Ipswich, Suffolk. Please remember to enclose a Stamped Addressed Envelope and a list of names of all those in your party. Refreshments and free car parking are available. For further details contact Darren on 0473 227332 during office hours only.

The Arfon Repeater Group 70cm Repeater GB3AN has now been operational from its new site on the north east coast of Anglesey for three months. The received reports to date, show good results of the predicted coverage area, but during the past few weeks a problem arose which made access to the repeater difficult. The cause was traced to the 1750 Hz tone detect circuit which has now been rectified. The Group apologies for any inconvenience this caused. The linking experiment between GB3AN on 70 centimetres and GB3AR on 2 metres is also receiving favourable comments, and giving extended coverage to both repeaters.

The repeaters can be link from either GB3AR or GB3AN and once the confirmation "K" is received, then normal QSO's can be carried out over the two repeaters which has a four minute time-out. Both send a total of four pips, it is good practice to wait for two pips before transmitting, this gives a chance for a station to break-in. For further details about the group or for a copy of the operating procedures for linking, contact the Arfon Repeater Group Secretary, John, GW0AQR, enclosing a Self Addressed Stamped Envelope. John's address is

correct in the RSGB Call Book.

The Repeater GB3NA has been closed down by the RIS from the 9th of February 1994 as no NOV was in force. The issue of the NOV has been deferred by the RSGB in consultation with the Radiocommunications Agency pending an investigation by G4AFJ, Chairman of the Repeater Management Group, of allegations that individuals concerned in the management of the repeater are responsible for abuse and until RSGB(RMG) are satisfied that there are adequate arrangements in place to reduce abuse. Anyone who wishes to give information on this matter is advised to write to G4AFJ, 31 Newbold Road, Kirkby Mallory, Leicestershire, LE9 7OG.

{Newsreaders: This item can be deleted if your broadcast does not cover the County of Lothian or Isle of Man areas}

Attention RSGB members in the County of Lothian and the Isle of Man areas. Two new RSGB Liaison Officers (RLO) have been appointed, one for each area. The RLO for the Lothian is Mr TWG Menzies, GM1GEQ. His address is 31 Pentland Terrace, Edinburgh, EH10 6HD. For the Isle of Man, the RLO is Mr C G Baillie-Searle, GD4EIP. His address is 2 Marguerite Place, Foxdale, Isle of Man, IM4 3HE. RLOs hold a wide range of information and they are available to help any RSGB member seeking advice.

Next, attention all Club and Rally Secretaries. The Society intends to update all the society records of all Club Rallies and Events for 1995. For this to be achieved, can all club secretaries involved send the date of their event for 1995 immediately to RSGB Headquarters so that it can be included in the list. Information should be marked for the attention of Justine Hodges, Marketing Coordinator, and must be received at Headquarters by Friday the 4th of March.

Congratulations to Len Williams, G4UUX, the winner of the Morecambe Bay Amateur Radio Society Construction Competition which took place last January. Len was presented with a silver Cup by Ian, G4VAP who started the competition some years ago in order to encourage more home construction.

Now some items of HF DX news from the weekly RSGB DX News Sheet which is edited by Brendan McCartney, G4DYO. From Aruba, VE3MR will sign P40MR from tomorrow, Monday the 21st until Saturday the 12th of March. Activity will be on 12 and 17 metres, SSB only. From Canada, G3RBP will be active as VA3YJ/8 from Yellowknife, North West Territories (VE8), for one or two days, during the next three weeks. Activity will be on 160, 80 and 40 metres, CW only. Check these frequencies 1.827, 3.505 and 7.005MHz, QSX up. From Africa, ZS6EZ will activate the callsign ZS9Z from Walvis Bay, starting, all being well, late on Thursday the 24th of February. On Monday the 28th at 2200 UTC, midnight local time, the area becomes part of Namibia and he will use the callsign V51Z, until after dawn on Wednesday the 2nd of March. Particular attention will be paid to the WARC and LF bands. And from Reunion Island, G0IXC will sign FR/G0IXC from Friday the 25th of February for three weeks. Activity will be SSB only, 10 - 40 metres but mainly 15m.

{Newsreaders: This event can be deleted if your broadcast does not cover the local area}

Rally news now and we know of the following event for today, Sunday the 20th of February:

The Trafford Rally is being held at the G-MEX Centre, Manchester. Doors open at 10.30am for all, but there is a disabled persons priority queue. This event features all the usual trade stands and many other attractions, including an RSGB book and information stand. Refreshments are available and talk-in is on channel S22 via GB1GMX.

There are three events that we know for next weekend:

On Saturday the 26th the Rainham Radio Rally will be held at the Rainham School for Girls, Derwent Way, Rainham, Kent. A new venue for this event. Leave the M2 Motorway at junction 4 and follow the Rainham Radio Rally arrows. Doors open at 10am. The venue has more space and ample off road parking. There will be trade stands, a bring and buy stall and club stands featuring, Packet, Television, KRG, Raynet etc. Refreshments will be available and talk-in will be on channel S22 via GB4RRR. Further details can be obtained from Martin, G7JBO on 0634 365980. Also on Saturday the 26th, the Tyneside Amateur Radio Society Annual Rally will be held at the Temple Park Centre, John Reid Road, South Shields. Accessable from the A1 and A19 from both the north and south and the A69 from the West. Doors open at 11am, 10.30 for disabled visitors. The event features all the usual trade stands and a bring and buy stall. Refreshments will be available and talk-in will be on channel S22. Further details can be obtained from Jack, G0DZG on 091 265 1718.

And on Sunday the 27th of February, the Taw and Torridge Rally will be held at the Bideford Halls on the Quay, Bideford, North Devon. Doors open at 10.30am. The event features trade exhibitors and a bring and buy stall. Refreshments will be available all day. Further details can be obtained from Mike, G3PGA,who is QTHR.1IJK on 061 748 9804.

Next a date for your diary:

The 1994 RSGB London Amateur Radio and Computer Show is to be held during Saturday the 12th and Sunday the 13th of March, at the Lee Valley Leisure Centre, Picketts Lock Lane, Edmonton, North London. February's RadCom contains details of the Show which is being run by RadioSport Ltd, in conjunction with the RSGB and the Southgate Amateur Radio Club. A Show Guide is being published as a supplement to the March edition of RadCom. There will be no RSGB National Convention this year so the Society will put on a larger stand at the London Show. For further information call 0923 893929. If anyone would like to take advantage of the special arrangements made for hotel accommodation during this event, then please get in touch with Bernard Godfrey, G4AOG, telephone 0923 678770.

HF contest news now:

The ARRL International CW DX Contest takes place this weekend, from 0000UTC on Saturday the 19th, to 2400UTC on Sunday the 20th of February. Contestants may use all bands from 1.8MHz to 28MHz, but excluding the WARC bands. See February

RadCom page 19 for rules and entry details but please disregard the dates which are incorrect. To recap, the correct dates are the 19th and 20th of February. The RSGB 7MHz DX Contest takes place next weekend, from 1500 UTC on Saturday the 26th, to 0900 UTC on Sunday the 27th. See September RadCom page 81 for full details.

Next the results of the 1993 2nd 1.3/2.3GHz Fixed Contest were as follows: In the 1.3GHz Single Operator Section G3MEH came first with 251 points and GD4GNH was second with 113 points. For the 1.3GHz Multi Operator Section the winner was G8OHM with 149 points. The winner of the 2.3GHz Single Operator Section was G8ZQB with 32 points.

Now some VHF contest news:

The penultimate sessions of the RSGB 70MHz Cumulative Contest takes place next Sunday the 27th of February, from 1000 to 1200 UTC. There are three sections:- Fixed station single operator, Open and Listeners. See December's RadCom page 83 for details. The RSGB 144/432MHz Contest will take place from 1400 UTC on Saturday the 5th, to 1400 UTC on Sunday the 6th of March. See January and February RadCom's pages 83 for details of the different sections.

GX3CHM/P will aired from East Pennard, Somerset, during today Sunday the 20th. It will be operated by members of the Yeovil Amateur Radio Club who will be commemorating the 40th anniversary of first sky-wave contact using a transistor transmitter. GX3CMH/P will operate on 3.560MHz CW using an equivalent QRPP transmitter to that used in the first tests. For further details contact G4JBL on 0258 473845. RSGB members may like to note that a feature on this historic event appeared in the February RadCom.

And now the solar factual data:

The period 7th to 13th February must hold a record of some sort, the geomagnetic field has been at storm or severe storm levels all the period, with sever storm at high latitudes every day. It is the most disturbed period since March 1989. Needless to say, the HF bands have been severly affected, auroras and noise storms were reported particularly from northern stations. The cause of the storms was an elongated coronal hole which has taken some 10 days to pass by, and as this bulletin was being prepared on the 14th we had not seen the end of it. No flares have been reported. Sun spot indices didnot change much day to day and meaned at 53. Solar flux levels have declined slightly and averaged 96 units. The 90 day mean was 106 units on the 8th. The geomagnetic Ap indices ranged from full storm levels of 62 units on the 7th and 8th only dropping to sub storm levels of 45 units by the 13th, with the period averaging at an Ap of 48 units. The state has been magstorms in progress all the period. The aa indices for the 1st to 7th February as supplied by the British Geological Survey gave daily averages of 43.7 nanoTeslas about K4, with the 1st being very quiet down to only 11.6 nanoTeslas, rising to sub storm levels of 85 nanoTeslas by the 6th and 7th, with the auroral periods being up to 136 nanoTeslas about K6. The X-Ray flux increased over the period and averaged B1.9 units, though the 12th was up to B2.9 units. Bartells rotation 2192 starts on the 26th February. A major Stratospheric Warming was reported on the 13th covering the North Atlantic,

Europe and was spreading East, the temperature rise was 30 degrees C at 10 Hecta Pascals level about 35 kilometres high.

Now the ionospheric data for Central France:

The F2 daytime critical frequencies at Poitiers as reported by Meudon, were very severly affected by the storms and only averaged 6.8MHz, with the 8th 9th and 10th being down to only just over 5MHz. The darkness hour lows averaged only 1.8 MHz with little variation day to day. These are the lowest levels recorded since this data was first given in October 1992. The darkness hours also recorded a lot of spread F and other phenomena at times making readings impossible.

Now the ionospheric data for the north:

The F2 daytime critical frequencies at Ekaterinberg only averaged 5.4MHz and the darkness hour lows 2.2MHz. Another suprise from solar cycle 22. About this time in solar cycles coronal holes are very prevalent, but most are either isolated patches or are tongues reaching up or down from the suns polar regions, which pass in two or three days, in the passed 17 years since I have been doing the GB2RS news, I cannot remember a coronal hole elongated along the sun's equator of the shape and size that has occurred at this time.

And lastly the solar forecast:

This week, the active side of the sun will be rotating away, solar flux levels are expected to be about the 110s, and the X-Ray flux is expected to be high about B3.0. Geomagnetic activity will depend on the progress of the coronal holes but is expected to decline to more normal levels. Ionospheric MUFs in the south are expected to be about 24MHz during daylight and 10MHz during the darkness hours. East/west paths may be slightly lower than this. Northern station levels will be lower.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns issued were in the G0 U L and G7 R T series, and Novice calls in the 2 0 A H and 2 1 C R series. .

You're listening to GB2RS, the news broadcasting service of the Radio Society of Great Britain, transmitting in the 80, 40, 6 and 2 metre bands.

Next, the local news.

NEWS FOR THE SOUTH EAST

Meetings for Tuesday the 22nd of February:

Dorking and District Radio Society has a talk entitled 'Doughnuts in Radio' by Pat, G8HMG. Members and visitors welcome. For further details tel: 0306 631236.

Stevenage and District Amateur Radio Society has a talk on 'The 1993 Coast to Coast walk' by Ralph, G7HFD. Details from Neil, tel: 0438 350882.

Waterside Amateur Radio Society has a talk by David Wright on 'Radio Astronomy'. Details from George, G0IDN on 0703 843491.

Meetings for Wednesday the 23rd of February:

Chesham and District Amateur Radio Society has a talk 'The RSGB - speaker to be advised'. Details from Ian, G0RTF on 0494 676391.

Cheshunt and District Amateur Radio Club has a talk 'The LONNY Wormhole' by Julian, G4NQO. Details from Roger, G4OAA on 0992 464795.

Darenth Valley Radio Society has a visit by Fred Stewart, RSGB RLO for Kent. More details from Len, G0HRD, tel: 0474 703322.

Dover Radio Club has a talk on 'The history of the Duke of York School' by Mike Carson. For further details contact Mick, G7NOR on 0304 825030.

Farnborough and District Radio Society has a talk entitled 'Introduction to Contesting' by G3HEJ. For more information telephone 0252 715765.

Grafton Radio Society has a talk 'Understanding Ferrite transformers in HF Power Amplifiers' by Stein Torp, LA7MI. Further details from Rod, G0JUZ 081 368 8154.

Newbury & District Amateur Radio Society has a Junk Sale. Further details from Norman, G0HFU tel: 0635 863310.

Worthing and District Amateur Radio Club has a Discussion evening. For further details contact G4GPX on 0903 753893.

Meetings for Thursday the 24th of February:

Colchester Radio Amateurs has a talk called 'Rallies and Practical Wireless' by Rob Mannion, G3XFD. Further details from Mike, G4YJN on 0206 738189.

Crowborough & District Amateur Radio Society has an E.G.M. followed by the talk 'Antenna design in miniature' by Eric, G3TXZ. For details contact Mick, G6UUO on 0892 661807.

Shefford and District Amateur Radio Society meets for its Annual General Meeting. Contact Paul, G1GSN on 0462 700618 for further details.

Southgate Amateur Radio Club has an Activity Night. Further information from Brian, G0MEE on 081 360 2453.

Vange Amateur Radio Society meets for its Annual General Meeting. Contact Doris on 0268 552606 for further information.

Meetings for Friday the 25th of February:

Clifton Amateur Radio Society has a Film Evening. Further details from Keith, G4TJE on 081 859 7630.

Hilderstone Amateur Radio Society has a demonstration 'First Aid & Resuscitation' by Ken Bailey, St Johns Ambulance Brigade. For further details, telephone 0843 869812.

Itchen Valley Amateur Radio Club has a visit from Rob Mannion, G3XFD. Contact Les, G3ABA on 0703 732997 for details.

Medway Amateur Receiving & Transmitting Society has its Annual General Meeting. Further details from Gloria, G7OVI on 0634 710023.

Wimbledon and District Amateur Radio Society has a talk on 'Desert Island Radio'. Information from Chris, G0KEB, tel: 081 397 0427.

NEWS FOR SOUTH WEST

Exeter Amateur Radio Society Club has a new venue and now meets in The Moose International Centre, Blackboy Road, Exeter. For details contact Ray, G3YBK 0392 78710.

Meetings for Monday the 21st of February:

Appledore and District Amateur Radio Club has a talk on 'Satellite Communications' by Dennis, G0FCL. Details from G4ETJ, tel: 0237 477301.

Wincanton Amateur Radio Club has an Open Evening. Further details from Dave, G3ZXX on 0963 34360 or Andy, G1FPW on 0747 51381.

Meeting for Wednesday the 23rd of February:

South Bristol Amateur Radio Club has a Talk/demo entitled 'Soldering Techniques and their use' by Ken, G0TDS. For more information tel: 0275 834282.

Meeting for Thursday the 24th of February:

Yeovil Amateur Radio Club has a Station-on-Air evening. Contact Cedric, G4JBL on 0258 473845 for further information.

Meeting for Friday the 25th of February:

North Bristol Amateur Club has a Table Sale. More details from Tony, G4ROX tel: 0272 513573.

NEWS FOR EAST ANGLIA

Meeting for Monday the 21st of February:

Felixstowe and District Amateur Radio Society has a Computing Workshop, led by Paul, G4YQC. For further details contact Paul, G4YQC on 0394 273507 any evening.

Meetings for Wednesday the 23rd of February:

Ipswich Radio Club has a CW evening. For further details contact Sheila, G8HYE on 0473 742072.

Norfolk Amateur Radio Club has a Construction and QRP evening. For further details contact Sheila, G0KWP on 0603 618810.

Meetings for Thursday the 24th of February:

Kings Lynn Amateur Radio Club has a lecture on 'Amateur TV on the cheap' by Ian, G1NOO. Visitors welcome. Details from Ian, G0BMS on 0553 765614.

Yarmouth Radio Club has a talk 'Tapes for the Blind' by G0FIY. Contact Tony, G3NHU, on 0493 721173 for further details.

NEWS FOR THE MIDLANDS

Meeting for Monday the 21st of February:

Aldridge and Barr Beacon Amateur Radio Club now meets at its new venue: The Aldridge Central Community Association Hall, Middlemore Lane, Aldridge, Walsall, WS9 8AN. Details from Charles, G0NOL 0922 36162.

Dudley Amateur Radio Club has a Resume of current VHF practices and thoughts for the future by Peter Burden, G3UBX. More information from Drew, G7DMO on 0533 755310 during office only.

Stourbridge and District Amateur Radio Society has its Annual Construction Competition. Contact James, G7HEZ on 0384 374354 for more details.

Meetings for Tuesday the 22nd of February:

Bromsgrove Amateur Radio Society has a Visit by Dave Gourley, Zonal Council Member and John Marks, local RSGB Liaison Officer. After a short talk, there will be a Question and Answers session. Details from Barry, G0TPG on 0527 542266.

Buxton Radio Amateurs has a QSL Card night. Details from Derek, G4IHO, tel: 0298 25506.

Loughborough and District Amateur Radio Club has a talk on 'Video Editing' by Derrick, G7OXA. For further details contact G8SNF, tel: 0509 218259.

Meetings for Wednesday 23rd of February:

Derby and District Amateur Radio Society has a talk by Ken Griffin called 'Another side of G4HDP'. Details from Hayley, G7PXA on 0773 856904.

Lincoln Short Wave Club has a talk 'Amateur Satellites' by Dave, G4CUO and Ted, G6HMS. For more details contact Nigel, G7KIE on 0522 703778.

Telford and District Amateur Radio Society has its 'Under a Fiver' Competition. For further details contact Dave, G4EIX, on 0952 588878.

Meetings for Thursday the 24th of February:

Amateur Radio Club of Nottingham has a Construction night. Further details from Simon, G0IEG on 0602 501733.

Salop Amateur Radio Society has a demonstration of 'FAX and SSTV, both software and dedicated machines' by Clem, G0ALV. Details from Sheila, G0SST 0743 361935.

Meetings for Friday the 25th of February:

Coventry Amateur Radio Society has a Quiz Night. Further details from David, G1ORG, tel: 0203 311468.

South Notts Amateur Radio Club has a visit from Nunsfield House Amateur Radio Club at Fairham College. Contact Julie, G0SOU on 0602 216342 for details.

NEWS FOR THE NORTH OF ENGLAND

Meetings for Monday the 21st of February:

Rochdale and District Amateur Radio Society has a Talk by Rev George Dobbs, G3RJV. For more information contact Brian, G0GNR on 061 653 8316.

Sheffield Amateur Radio Club has a Construction night. Further details from David, G0JJR Tel: 0742 446282.

Thornton Cleveleys Amateur Radio Society is discussing its 'Stand Plan for the Norbreck Rally'. Further details from G4BFH who is QTHR.

Woodford (RATEC) has a talk 'HMS Bronington, G0TON' by Peter, G3XGE. Visitors welcome to attend. For further details contact Don, G4SFU on 061 485 3912.

Meetings for Tuesday the 22nd of February:

Bury Radio Society has a showing of RSGB videos. For further details contact Mike, G4GSY on 061 761 5083.

Chester and District Amateur Radio Society has a Surplus Equipment Sale by G3EWZ. Further details are available from G0OXA, tel: 051 608 3229.

Liverpool and District Amateur Radio Society has a Surplus Sale. Further details from Ian, G4WWX QTHR.

Wakefield and District Radio Society meets for a Night on the Air. Further details from Roy G0TBY 0924 893321.

Meetings for Wednesday the 23rd of February:

Hornsea Amateur Radio Club has a talk 'PAL Colour TV' by G8EQZ. For further details contact G4UOZ on 0964 534283.

Mid-Cheshire Amateur Radio Society has a Video night. Contact Mike, G7LQD on 0606 331210 for details.

North Wakefield Radio Club has a visit to the West Yorkshire Police Control at 7pm. Details from John, G4RCG on 0924 362144.

Stockport Radio Society has a Quiz night - Committee v Members. For further details telephone 061 439 4952.

Meetings for Thursday the 24th of February:

Hambleton Amateur Radio Society has a Practical night. For further details contact Nigel, G0NHM, 0609 776608.

Keighley Amateur Radio Society has a 'Practical Fractals - a hands on electromnic experience' by Lance Kean. Further details from Kathy, G0RLO on

0274 496222.

North Wakefield Radio Club has a talk entitled 'A guide to short Term Forecasting' by Charlie Newton, G2FKZ. Details from John, G4RCG on 0924 362144.

Meetings for Friday the 25th of February:

East Cleveland Amateur Radio Club has a talk on Mountain Safety by Jim Butcher. Details from Alistair, G4OLK on 0642 475671.

North Ferriby United Amateur Radio Society meets for its Annual General Meeting. Further details from Frank, G3YCC, tel: 0482 650410.

South Manchester Radio Club has a talk 'Desk Top Publishing' by G0OQS. For further details contact Edward, G7FQY, tel: 061 969 1964.

Stockport Radio Society Computer Group has a talk 'Computer hardware/software' by a member of the Firstec Company. For further details telephone 061 439 4952.

NEWS FOR SCOTLAND

Meeting for Tuesday the 22nd of February:

Dundee Amateur Radio Club has a Construction Night. Details from GM4FSB who is QTHR.

Meeting for Thursday the 24th of February:

Dunfermline Radio Society has a Construction evening - Top Band DF equipment. Further details from Wallace, GM0GNT who is QTHR.

Meetings for Friday the 25th of February:

Aberdeen Amateur Radio Society has a talk 'A junk sale Frequency Meter'. Details from Gordon, GM7PXW, tel 0224 780591.

Ayr Amateur Radio Group has a 'Home Constructors' evening. Details from Ian, GM43VMG on 0292 260870.

West of Scotland Amateur Radio Society has a Construction Competition. For details contact Jack, GM4COX on 0698 350926.

NEWS FOR WALES

Meeting for Monday the 21st of February:

Dragon Amateur Radio Club has a Talk by Bob, GW3CGN. Further details from Tony, GW0FMQ, tel: 0248 600963.

NEWS FOR NORTHERN IRELAND

Meeting for Friday the 25th of February:

Ballymena Amateur Radio Club has its Winter Bring & Buy Sale. The RAIBC will be present and there will be an RSGB Bookstall. Refreshment will be available.

Details from Jeff, Gi4HCN, tel: 0266 659769.

And that's the end of this week's GB2RS news broadcast, which was prepared by the Radio Society of Great Britain.

>|> program is entitled CELLDEMO.ZIP

It is a demo of how their "black-box" decoder allows several different types of 800MHz radios to track the movement of cellular phone calls from cell to cell. The demo program is just a simulation of how the control data is decoded. This can be used to control your radio's frequency (in the real version of the program). Nifty demo if you like that kind of stuff, but the product sells for around $400 (+ or - $100) - not for the average joe.

>illegal.

Good amateur practice would suggest that you take those complaints
seriously and figured out why you had a notable chirp. I wouldn't
brag too much about running a sub-standard station for years and
cheerfully ignoring the complaints :-) <- This is a smiley.

>I doubt that the difference between spurious emissions of -50db and
>-48db can even be detected by monitoring the radiated signal. If my

>-50db to -48db difference is 0.00003 watt. It's not in the same league
>as a kw on 11m. It's more like driving 57 mph.

Keep in mind the second harmonic falls into a fairly sensitive
piece of spectrum, the military aviation band. Anyway, the spec
for amateur transmitters operating between 30-225Mhz is -60dBc,
no greater than 25uW in any case. I'm not sure where you got the
-48dB and -50dB numbers from. -48dB versus -60dB is 12dB over
the limit, which is 5dB more than the absolute maximum permitted
level for a 5W transmitter. We've never been told how far off spec
the FX-146 was; Ramsey claims 2dB, but Bloom stated it was considerably more.

Anyway, comparing 1kW on 11m to the amateur rules is pointless.
Amateurs have historically been very proud of a strict compliance
to the rules, and frequently ridicule 11m folks for not complying
with the appropriate rules. I should hope you aren't condoning the
operation of radios with illegal harmonic outputs on sensitive aero bands.
If we can ignore the rules if we don't break them much, then why not look
the other way when General class operators get 1 or 2 kHz into the Advanced
band segments?

1775. Help - Need ARES Packet Software.

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-18 21:30:00 UTC
From: Gregm@raynet.demon.co.uk
Message-ID: <761607000snz@raynet.demon.co.uk>
Source record: 270877

Hi,
I believe that ARES has a program for packet radio which allows the tracking
of Competitors on a fun run/walk etc. Could anyone help out with a filename
& FTP site where this program is stored ?
My RAYNET group has a forthcoming 'attraction' in '95 of 300 people taking
part in a 50 mile cross country walk & this program sounds ideal for cutting
down on our paperwork load during the event.

Thanks,

1777. Good car choice for mobile (Honda Accord??)

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-18 22:33:28 UTC
From: markeh@netcom.com
Message-ID: <markehCLFyo1.EtI@netcom.com>
Source record: 270929

Appreciate any help::

I am looking for a new car. My first choice was a Honda Accord. When the dealer called the factory rep to ask about mobile radio installations, the reply was: "We don't know anything about that. We have guidlines for installing equipment we sell (ie: stereos) only. If you install any other equipment (ham equip) you are on your own. Any damage you do is your responsility". (not a direct quote - just my interpretation of what I heard)

SO.... I still need a car, and would appreciate any help from people who have been down this path

-- Have you installed a mobile rig in a recent (93, or 94) Honda, and what was your experience.

-- Can you reccomend another car (similar size/price/quality), recent/new model, where you have had success with an install, and didn't fry the ignition computer, etc...

Thanks for your help

Mark

For Followups to this post check the newsgroup rec.radio.amateur.space

Edge of Space Sciences, Inc. (EOSS) is a non-profit organization comprised of individuals interested in the use of high altitude balloon flights to offer an experimental platform for students and other experimenters. The group has a very high level of participation by amateur radio operators, however, this is NOT a requirement for membership and participation.

EOSS has flown 14 successful flights over the past few years. We regularly fly amateur television, and a suite of atmospheric sensors.

Other experimental payloads have included, GPS and LORAN-C for a comparison of their accuracy. Homebrew differential GPS on the same flight. Students of Coloraro University at Boulder (CU) created their own differential system using a gps receiver at a KNOWN location, and calculated the offsets themselves, allowing the GPS vs. LORAN-C comparison greater accuracy.

EOSS hosted last year's "National Balloon Symposium" in Denver Colorado. People from more than 10 states, and Canada were in attendance as well as some of the commercial providers of equipment used in our "hobby".

We plan to fly EOSS-15 soon and here is our general information release about this flight. If you have any questions about the flight or EOSS please use email to my address (sig file at bottom).

EOSS-15 FLIGHT PROFILE

LAUNCH SITE:
Thunder Ridge Middle School
Picadilly and Smokey Hill Rd.
Aurora, Colorado, USA

latitude 39.61195 deg North
longitude 104.75050 deg West

(The lat/lon is actually for a location within 1 mile of launch point. I haven't been to the launch site to take an accruate fix yet.)

LAUNCH DATE: February 26,1994

LAUNCH TIME: 1600 UTC (Set up 1400 UTC) Launch time subject to FAA approval

ON-BOARD EXPERIMENT: Conducted by Cherry Creek High School.

PURPOSE: To measure the various levels of alpha, beta, and gamma radiation at various altitudes.

SHUTTLE FREQUENCIES:
Packet: 144.340
ATV: 426.250
CW Beacon: 147.555
Carries the call of WB4ETT

There will be a HF net run by Sparky\ KA0DPC on 7.232 MHz (phone). And the FOXHUNTER'S will coordinate on the Colorado Repeater Association's repeater 147.225 MHz (+600kHz). This will also be used for some local information during the flight. Thanks in advance to the Colorado Repeater Association for the use of their repeater.

REMARKS: Edge of Space Sciences will provide the platform for Cherry Creek High School and Thunder Ridge Middle School to study the lower atmosphere. Cherry Creek H.S. students have modified a geiger counter to meet the EOSS interface specifications which will measure the alpha, beta, and gamma levels of radiation vs. altitude. The experiment will gather data that should interest local NASA and NOAA officials.

Thunder Ridge M.S. students will make graphs that will help them understand the temperature vs. altitude and balloon dynamics by graphing the ascent and descent rate of the balloon.

The project will be presented at this years Denver, News 4 Education Exposition at the Colorado Convention Center on March 11,12,13 1994. More information about the EXPO can be obtained from EOSS.

Sponsorship for this flight and Education Exposition have been provided by:

>
>Why do I feel that Ten Tec is more likely to make kits that will work, meet
>FCC spec, and not thump when the squelch closes?
>
This is sort of interesting from a number of perspectives:

First, Ten-Tec got its start making kits, some QRP transceivers which
were, by some accounts, pretty horrendous as to performance and spectral
purity. You could buy anything from boards up to the complete transceiver.
The latter was pretty rinky, and sort of ignored the idea of 'shielding.'

Then came the Argonaut 505. A lot less rinky-tink but still not the
pinacle of sophisticated engineering. The 509 was better, and so on...

What's the difference between Ten Tec and Ramsey, that will probably
mean that one will still be around after twenty more years?

Well, Ten Tec is LEGENDARY for treating their customers like gold.
In fact, they do so well at this that they seem to be making a go of
it without the dealer network who, by all accounts, pushed the higher
margin competition and whose attitudes and approaches was inferior to
Ten Tec's own.

From the looks of things, Ramsey may have a bit to learn in that department.

It's too bad, but we often find that the kind of independent spirit
and just plain cussed stubborness that leads a guy to go out on his
own and start a neat new business, also seems to result in a brusque
and bluff attitude towards the clientele. Somehow, Ten Tec seems to
have separated the cussed stubborn guys who can make a venture in
a niche market work, against all odds, from the kind of flexible and
accomodating folks who keep the customers happy.

Apparently, Ramsey hasn't.

Two companies. Similar beginnings. I'm afraid one is going down a very
different road than the one paved by the other.

I have a perverse question about feeding an antenna with a coaxial transmission line. This is intended as food for thought. (You've been warned ;-)

Assume you have a 50 ohm antenna you want to use on a single frequency in the two meter band. You will be feeding it with about 100 feet of coax, which will be cut to an exact integer multiple number of half-wavelengths on the operating frequency. Which of the following two transmission lines will you choose to give lower loss?

A. 50 ohm air-insulated copper line with 1" OD

B. 75 ohm air-insulated copper line with 1" OD -- in other words, same line as in (A), but a smaller center conductor.

Some Hondas are rolling wide-band RF noise sources. This is certainly
true of N1JIT's car. Honda's people at their US headquarters were rather
hostile on the telephone when I asked about the issue. With customer
service like that, I'll buy an american car next time, and the japanese
economy can continue to plummet...

I should note that Nissan of America sent a pretty good set of sheets to
me in which they indicated maximum power levels at different frequencies
that they recommend. It was generally pretty positive.

Ed Hare at the ARRL sent letters to the various auto manufacturers asking
about radio installation. The responses varied. I have a copy of the
letter from Chrysler, in which they indicate which extra ordering code
to use when ordering a new car to be built. This code will ensure the

installation of electronics modules which are specially shielded. Chrysler has been doing a lot of work to ensure their cars do not have these problems, too.

GM has a booklet out on the subject. I was very impressed to see a GM booth at Dayton last year. The folks in the booth were GM hams, who were handing out info on proper installation of radio gear.

Based on positive info from the US companies, and mixed to negative from Honda, I'll probably buy american next time.

Source record: 270935

>I got my 530 around 5 or 6 months ago. How long is the warranty good
>for? I have never tried using the DTMF code squelch. Is this something
>I should send my radio back for even though I have never tried it out??
>If I have performed the jumper 13 removal, will that invalidate the
>warranty??
>
>Steve Adams
>sadams@ctp.org

The warranty on the FT-530 is 1 year. Whether you return the radio because
of the DTMF squelch would really depend on whether or not you; a) want a radio
that functions according to it's specification and/or b) might want to use
the feature at some future date. I have never really used DTMF squelch but
it bothered me that the radio was "defective". Since it was under warranty,
the total cost to fix it now was the cost of shipping. If I waited a year,
the price would rise to at least $156! If I discover any other problems,
I will certainly return it again if the warranty is still in effect. It
might also give me a better resale price since I can point out that the
radio has had all factory improvements performed. As for jumper 13, I had
removed it but was told by Yaesu that this was an authorized modification.
Yaesu does publish this modification and I believe a copy is available
for the asking.

Hope this answers your questions...

: A. 50 ohm air-insulated copper line with 1" OD

: B. 75 ohm air-insulated copper line with 1" OD -- in other
: words, same line as in (A), but a smaller center conductor.

Great quiz question. The answer is that the 75 ohm line with the
1.5:1 SWR will have higher loss than the 50 ohm line with 1:1 SWR.

It's true that the 75 ohm line has lower loss WHEN TERMINATED WITH 75
OHMS. To see why, realize that nearly all the loss in an air-dielectric
line is due to the current flowing in the conductors (I^2*R loss).
For a given shield size, a 75-ohm line's center conductor has 1.36 times
the resistance per unit length of a 50-ohm line.

Derivation of above: For an air-dielectric coaxial line,
Zo = 138 log (D/d) where Zo = line characteristic impedance,
D = ID of shield and d = OD of center conductor. So:
D/d = 10^(Zo/138) which is 2.3 for 50-ohm and 3.50 for 75-ohm line.
Because of skin effect, the resistance per unit length is inversely
proportional to the circumference (and thus diameter). This means
that for a given shield diameter, the total resistance of both
conductors is proportional to (1/D + 1/d) = (1/D) * (1 + D/d).
So, for a given shield size (set D=1), the 75-ohm line has
(1+3.5)/(1+2.3) = 1.36 times higher resistance than 50-ohm line.

For a given power level, the current in the 75-ohm line is SQRT(50/75)
= .816 times that in a 50-ohm line. So I^2*R = .816^2*1.36 = .907
times the loss in a 50-ohm line.

But getting back to the quiz question:

Since the line is a multiple of 1/2 wavelength, the feedpoint impedance
will be 50 ohms, even with the 75 ohm line.

The current varies sinusoidally along the 75-ohm line (the standing wave),
being maximum at 50-ohm points (integer multiple of 1/2 wave from the
end) and minimum in between, where the impedance is 75^2/50 = 112.5 ohms.
If the current is 1A at the 50-ohm points, then it is SQRT(50/112.5) =

2/3 A at the 112.5 ohm points. So the standing wave of current can be represented by

I = 1A * [5/6 + (1/6) * cos(2*PI*s/L)]

where s = distance along line and L = wave length.

The rms current, averaged over the entire line, is then

5/6 + .707/6 = .951A

So the question is: does .951A flowing in a 75-ohm line's center conductor cause more loss than 1A flowing in a 50-ohm line's center conductor? We already know the 75-ohm line has 1.36 times the loss resistance, so with .951 times the current the loss is:

I^2 * R = .951^2 * 1.36 = 1.23 times the loss in a 50-ohm line

If you have 1 dB of loss in the 50-ohm line, the 75-ohm line will have 1.23 dB loss when feeding a 50-ohm load.

As a practical matter, however, low-loss 75-ohm coax can often be obtained free as scrap "ends" from your local cable TV company. Even when feeding a 50-ohm load, it will generally have lower loss than standard RG-8 type or (gasp!) RG-58 cable. The only hard part is figuring out how to make inexpensive connectors for it.

Hi Dana, I've posted that fix a couple of times and it is available on
a server. Unfortunately, I'm at home and that info file is at the office.

Remove R24 and solder the base of R24 into the hole that was previously
occupied by the upper lead of R24. Solder the cathode of a 1N34A into the
hole previously occupied by the base of R24. Solder the top of R24 and the
top (anode) of the 1N34A together. Solder a 10k ohm resistor to that same
junction and solder the other end to the top of R11 which is +5v. This
mod doubles the hysteresis in the COR circuit and reduces the thump.

Someone has set up a library of mods including those for the FXs and I just
can't remember where it is but it was no more than a couple of weeks ago.

Would someone please give me some general information about mobile ham radio, and repeaters, or point me to an FAQ. Specificly, I would like to know...

- Can mobile amateur radio stations operate in full duplex?

- Can repeaters in fact be used to place local telephone calls? If so, is there a charge for this service? Is it limited?

- What are the legal restrictions on amateur radio traffic? Are data connections allowed?

- What baud rate could I reliably connect at through a radio link?

Thanks for the help!

1790. RF Power Amp stages, design. Help needed!

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-19 04:37:10 UTC
From: asirene@ntuvax.ntu.ac.sg
Message-ID: <1994Feb19.123710.1@ntuvax.ntu.ac.sg>
Source record: 270942

Hi,

I'd like to know what considerations are required to modify an existing HF RF Power stage to a higher power without needing
to actually build a separate HF linear amp. Specifically I'd like to know if it is possible to drop a different transistor into
place and change the current limiting resistor of the final stage, provided the transistor is carefully selected, and get an
increased power output? What about the driver stage? Is the output of the driver stage critical as I see in the catalog, it appears
that some of these transistors come with a specified input power, eg: 0.1 watt in/ 15 watt out/ Ppe 23 dB. What exactly is the Ppe?
Another thing about transistor selection, will a VHF transistor work well in a HF circuit? For example, the specs above are for the
MRF 261 transistor which is actually a VHF transistor, will this work in a HF power stage then? More specifically I am trying to
modify the output of the ARK 20 QRP transceiver from about 3 watts to say 12-20 watts or so. How difficult will the change in
design be? The reason I am thinking of this is that I want to keep the QSK active rather than have a separate QSK TR switch for the
additional linear amp.
Tks for any advice.

Oh, Cecil, give it a rest. As far as many people are concerned,
radio is a secret force of nature. Anyway, you are trying so hard
to interfere with a perfectly valid amateur radio thread because you
appear to be some fan of Ramsey Electronics. Fine, if you are
fan, fine. But attempting to discredit critics of Ramsey is
pointless and inflamatory. You've worked hard to discredit
my statements, trying one tactic after another. First you
condemn Jeff Gold as "less than a member of the human race". Then
you try "but Jeff had an FTR-146 that is obsolete and therefore
let's drop it". Then you try the very behavior you condemned Jeff
Gold for. Then you outright claim that I'm a liar ("giving you
the benfit of the doubt..."). You can't have it both ways, Cecil.

What you fail to acknowledge is that the public dealings of an
amateur business is a perfectly valid topic for rec.radio.amateur.misc.
Even if you don't agree with the topic, it doesn't invalidate the
topic.

>: <no flame intended, but a flare of irritation with the post>

You're missing the point entirely! Either that or you refuse to see it.
The "Jeff Gold" post was intentionally insulting and inflammatory, and
it completely flies in the face of your earlier statement that Jeff
Gold is "less than human". Attacking Jeff Gold because you don't
like his postings *doesn't* belong on rec.radio.amateur.misc, it
would be fine in alt.flame, where it seems many hams won't go have
the flame fests but should.

I hope you and some other hams can get his antenna back up, or at least string
up a dipole; that 6 week recovery period will go a lot faster if he can
get back on the air!
I'm sending him a card from Hawaii.

>

Because we had 8 inches of rain in 6 hours - internet became interiorwet!
We have 3 UNIX mainframes here - unix3 doesn't like to let in anything
from the outside - just drop the `3'.

Now, have you, Cecil, or anyone else, built any of Ramsey's HF QRP xmtrs?
For $30 I might get one of those pup's for 20M (but from what I hear
I think a low pass filter might be in order).

73,
Jeff NH6IL

1797. Coax minimum-loss impeance

Newsgroup: rec.radio.amateur.misc

Source record: 270949

I think the 92 Ohm coax was an attempt to make as high an impedance as reasonable, since most tube circuits work best at higher impedances. Anything much higher was very lossy and fragile and expensive, so they got as close as they could to 100 Ohms. Just a speculation..

Cecil Moore (kg7bk@indirect.com) wrote:
: Dana Myers (myers@pongo.West.Sun.COM) wrote:
: : If you have any kind of trouble with Ramsey kits, you run the risk of
: : being slandered. * Dana H. Myers KK6JQ

: Slander has a legal definition. It is next to impossible to slander someone
: during a private telephone conversation. It is very easy to commit slander
: on Internet. Statements that can't be proven resulting in monitary loss is
: all one needs to prove slander. Who did you say got slandered?

I'm not a legal expert here but, who ever said monitary loss is necessary
for slander to occur? _American Heritage Dictionary_:
slander n. 1. Law. The utterance of defamatory statements injurious
to the reputation or well-being of a person. 2. A malicious statement
or report.

Now again, like guilt, slander is not something that has to be proven to
be existant. Tonya Harding (sorry, I've been following rec.skate) is
frequently said to be "innocent until proven guilty." This doesn't mean
that if she's innocent the court can make her guilty. It can say she's
innocent or guilty but can't change the reality of her actions (or lack
thereof). Slander, likewise, isn't only existant if it is legally proven.
It happens if it happens. Whether somebody can get compensation for being
the victim is another matter altogether.

Now I'd say that (at least from past and recent postings) Ramsey hasn't
exactly lived up to the expectation for his products. Now somebody
saying that he was not happy with somebody else's product is entitled to
that opinion. Whether or not you decide to take this opinion is another
matter altogether. I don't know both sides of the story here, but from
what I've seen, both Jeff and Ramsey have uttered some measure of slander
--however, it seems to me that Ramsey's was unnecessary and done out of
irrationality.

MHO,
jesse

: "magic - the pretended art of producing marvelous results by compelling the
: aid of spirits, or by using the secret forces of nature." OK, Jesse, let's
: see some of those spirits and/or secret forces of nature.

connotation is different than denotation. Common usage is not necessarily
the same as the dictionary definition. By the way, my dictionary also has
"4. a mysterious quality of enchantment: e.g. the magic of the distant past."

I only hope you're arguing (well maybe just contradicting) just for the
sake of doing so. If not, I'd be somewhat doubtful about your eloquence
in public speaking. People, especially writers, tend to use anologies
and a measure of literary freedom to keep reading material from getting
banal.

Oh gosh, look where this thread has lead. A silly argument!

--jesse
(maybe I should resist the temptation to keep defending my ideas and
let the thread die)

OK I concede this thread to you. But just remember that not everybody
has your position on this matter. Especially me. And maybe Gold.

VK2SG RTTY DX Notes, 18 February
VK2SG RTTY DX Notes for week ending 18 February 1994 (BID RTDX0218)

Really we must say that 3Y0PI is the DXPEDITION OF THE YEAR '94 and
our congratulations go to the all the crew for having shown to all of
us a real example of wonderful operation under severe conditions. Was
excited, during my qso, to see on the screen Luciano, Luciano,
Luciano, 599 599 from 3Y0PI. Tnx Tony, WA4JQS and Luis, XE1L for the
outstanding effort repairing rtty gear.

Our thanks this week go to ZS5S, W2JGR, WB2CJL, 9X5LJ, I5ICY, I5IGQ
and IK5PWJ Packet Cluster, DJ3IW and the Central Europe DX Cluster
node DB0SPC, the NJ0M node of the Twin Cities.

>repeater activity on 2 meters at all. I visited Big Island and Oahu.
>I did find some highly unusual activity on 2 meter simplex in Honolulu.
>Be sure to scan the whole band for this stuff.

I'm only on HF but let me try to give you some frequencies from
memory:
Honolulu City Hall: 146.98 (Oahu County Civil Defense / RACES)
Waianae (West Oahu) 146.84 (ARES)
Diamond Head 147.07 (or 09)
Diamond Head 147.28
plus at least a dozen more but that should get you started. There's
actually a statewide system set up - linked via microwave. The guys
on the above machines will be able to give you more frequencies.

Make sure you bring an umbrella - we've just had a solid week of
tropical thunderstorm activity - 8 inches of rain fell within a
6 hour period and was it ever cold: 78 degrees during the day, and
only 68 at night - brrrrr - had to start using a blanket at night.

I drive an '87 Jetta that has a handy cave beneath the climate controls and ash tray. I have a scanner, CB and when I get my amateur lic, it has enough room left for a small 2m rig. I have looked at the 94 Jetta's and found that they still have the "cave." Routing power and cables is pretty straightforward and out of site.

If all you want is a 1750Hz toneburst then try whistling yourself..... saves having to fiddle with extra buttons and it proves your TX audio works if you bring the repeater up. With practice it is very easy to bring up most UK repeaters with a whistle - or are US ones harder to access (not including trying to whistle DTMF or other wierd tones!)

I find some of them interesting, and skip the ones that I don't. It's
often hard to know what is going on in other parts of the world for
such a specialised community as radio amateurs. So I don't object to this
type of posting - at the level I have seen them recently, anyway. However,
I take your point, and wonder if some gentle pointing at rec.radio.amateur.\
equipment might be in order? Or maybe even a new group, such as rec.radio.\
amateur.commercial? Just a thought.

AMSAT PBBS UPDATE

PLEASE READ THE UPDATE MESSAGE. THE FAMSAT PBBS WILL NOW ALSO BE ON PACTOR.
WT0N-3 WILL BE ON 10.127 LBS (30 METERS) MONDAY THROUGH SATURDAY
FROM 1600 UTC UNTIL 23OO UTC . THIS STATION WILL CARRY ALL AMSAT
BULLETINS AND KEPS. IT WILL ALSO CARRY OTHER SATELLITE RELATED
ITEMS SUCH AS "SPACENEWS". THIS PBBS WILL BE SET UP ON 300 BAUD
HF PACKET, BUT IT WILL ALSO BE AVAILABLE FOR AMTOR OR PACTOR
OPERATIONS IF THERE IS A NEED TO DO SO. AT THIS TIME, THE PBBS WILL BE
SET UP AS AN EXPERIMENT AND ANY COMMENTS AND SUGGESTIONS SHOULD
BE SENT TO THE SYSOP, BJ ARTS WT0N, AT ONE OF THE FOLLOWING

PACKET:WT0N@WB0GDB.#STP.MN.USA.NOAM
INTERNET:BJARTS@STTHOMAS.EDU
HF PACKET: WT0N-3 (ON 30 METERS)
HF PACTOR: WT0N

THE STATION IS LOCATED IN ST.PAUL, MN.USA. AGAIN PLEASE FEEL
FREE TO SEND SUGGESTIONS ON HOW TO MAKE THIS PBBS BETTER FOR THE
AMSAT USER.
**** 2/19/94 UPDATE TO AMSAT HF BBS OPERATION ****
FROM 23:30 UTC UNTIL 04:00 UTC WT0N WILL OPERATE HF PACTOR
UNDER THE CALL OF WT0N. THE FREQUENCY WILL REMAIN THE SAME AS THE HF
PACKET OPERATION 10.127 MHz.
SCHEDULE: AS OF 2/19/94
**********************************************************************
FREQUENCY: 10.127 MHz LSB
HF PACKET: 16:00 UTC UNTIL 23:00 UTC MONDAY THRU sATURDAY
VHF PACKET: ALL DAY ON 145.05 MHz IN ST.PAUL,MN.USA
HF PACTOR: 23:30 UNTIL 04:00 OF THE FOLLOWING DAY.

THANKS FOR THE MANY COMMENTS AND SUGGESTIONS FOR THE HF PBBS.
73 AND THANKS FOR YOUR TIME de BJ WT0N

SSTV? It happens even on RTTY. Just this morning, I tuned across
a W-land RTTY station on 14 MHz sending an "ASCII picture" of some
digitized Playboy fold-out. At least the person was smart enough
to use 75 baud instead of the standard 45 baud :-) :-).

Actually, I should have used 8-) instead of :-) .... ..

Sorry, but it's in the manual. :) IMHO, the manual is very poor, but,
from the Icom manuals I have seen, well above par for the course.

Cheers,
David

>Recently, I recieved a polite letter from the ARRL lawyers threatening
>legal action if I continue on this project. Specifically, they state
>that the ARRL owns the FACTS present in the repeater directory and
>that the format of the database infringes upon the ARRL copyright.

So, even though they know better (or should), they seem to be making a thinly-veiled threat of intensive litigation apparently designed to bankrupt you into compliance.
Yet another reason I vote with my dollars; I have never been, and will never be, an ARRL member.
How about publishing the letter on the net? I, for one, would like to ask the FCC about private and restricted-use ownership of its de-facto database of officially coordinated repeaters.

Maybe I'm being too harsh. After all, ARRL stands to lose a great deal if someone comes up with an alternative to their repeater directory; it's intuitively obvious to the most casual observer that every ham will save the few bucks and replace the copies they keep in their backpacks and glove compartments with laptop computers and very long fiber optic cables connected to their Internet providers. This would financially sap the organization and leave them unable to protect their publishing income.
I know personally I'd run right out and spend $15,000 on a laptop and miles of fiber to do THAT.

Amateur Radio Net

Amateur Radio Net is a net dedicated to Amateur Radio enthusiasts. If
you are an Amateur Radio enthusiast, or any of your callers are, this is
an echomail network for you. ARnet is replacing an older ham radio
network that recently folded - RF-Net(tm).

If you would like to get more information about this net, please look
for the information packet ARNET024.ZIP on the following BBS's:

Channel1
SaltAir
Mustang HQ BBS
Execnet
Intelec
Sound Of Music
and the Network Host BBS - The Silicon Garden.
It can be FREQ'd from 1:2619/211 using a magic name of ARNET

ARnet is available via QWK & FIDO. As this is the initial announcement
of the net many HUB positions are still open.

If you have any questions, please contact me.

John Woodstock, N2HAA
P.O. Box 436
Coram, NY 11784
BBS: 516-736-6662
FIDO: 1:2619/211

1816. International callsigns and prefixes

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-19 22:41:28 UTC
From: hamilton@BIX.com
Message-ID: <hamilton.761697688@BIX.com>
Source record: 270967

If you'd like to look up a US ham's callsign to get his name and address, etc., that's easy: either telnet to callsign.cs.buffalo.edu or (much better!) go buy a copy of the Walnut Creek QRZ! CD-ROM for $30.

But what can you do to lookup an international callsign? I'm not aware if there's even an ascii text file out there someplace that would allow me to do even the simplest lookup of the prefix to determine what country it's from. (This month's CQ contains such a list, but you can bet I'm not ready to key it in myself. :-)

What machine-readable resources are available for looking up international calls?

Regards,
Doug Hamilton hamilton@bix.com Ph 508-358-5715

Don't people read words and books by eye any more? The ARRL log
books and many other sources have all this information listed on
a couple of pages - you know, printing on paper. When you hear
an unfamiliar callsign, you look at the piece of paper. It's
much like looking in a dictionary - a real book, that is, not an
"on-line word source".

Nice island...not sure how it has managed through the recent
Hurricanes, but several years ago we used to go to Governor's Harbor
and operate during the CQWW...nothing serious, just four guys, a light
aircraft, a ton of beer and some radios...

drop a line to lhurder@arrl.org and ask him to send you a reciprocal
operating packet for the Bahamas. I am not sure what the fee is these
days, but it used to be $6.00US/year...renewable.

Part of the reason I am foggy on this is we found a loophole to crawl
through and have a Bahamian callsign now... we keep it current and
whoever is there uses it.

Hope this helps...

I agree. The telephone people put a lot of work into this, why not use
their results.
>
>
> This has been used for decades and there should be surplus equipment
> avilable.

It's not the surplus equipment that's important, but the availability of
inexpensive CODEC chips that do the entire encoding/decoding job. Many
computer sound I/O ports use these chips.

There are newer standards that do DPCM compression to get the data rate
from 64K down to 16K; these would be worth a look as well.

Well, books are wonderful for general reading--like novels, technical
information--but I find online information much more handy when it's
tabular data you're looking up. Granted, it's in order, but lugging
a callbook (uh oh, are you just talking about the prefixes? if you
are then putting it online seems a little silly since you can just tape
it up near the rig--or the computer) and letting your fingers do the
walking seems a bit less appealing than just typing in the call and
getting all the information!!!

Daniel: here's a reprint of the second project I posted on .homebrew.

Jeff NH6IL

****
Subject: Project 2 - 20 meter QRP CW xmtr

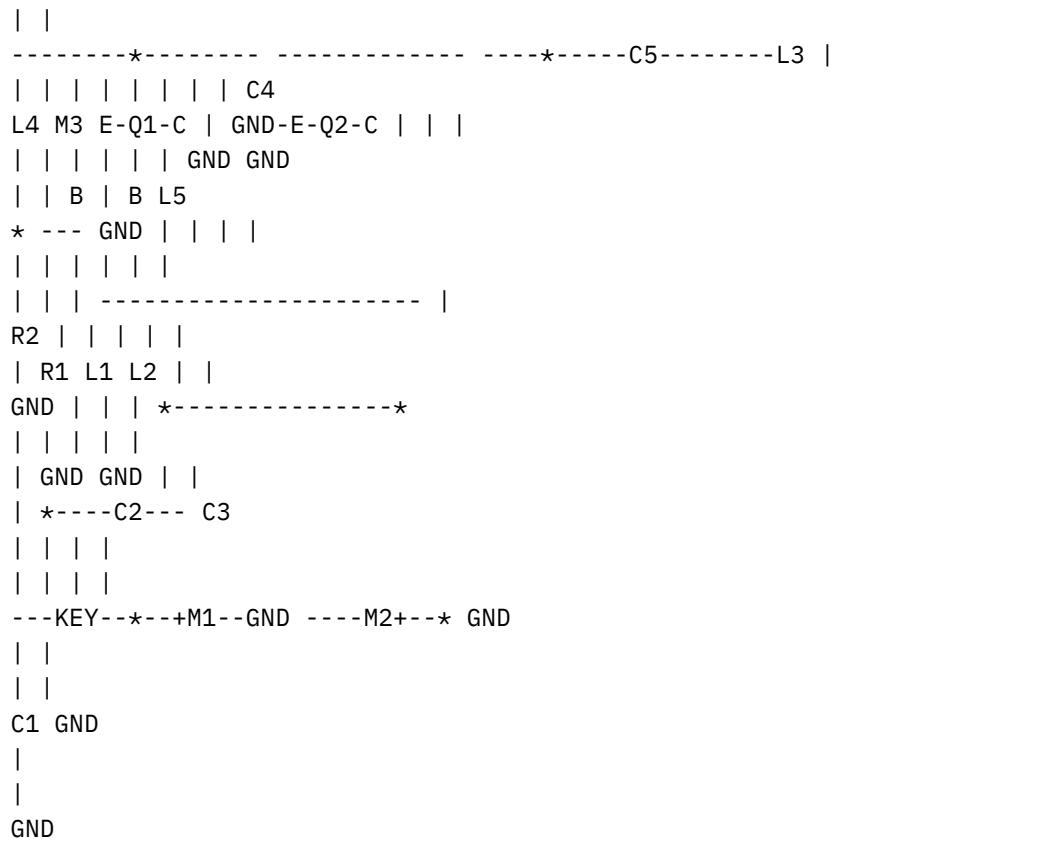
Here's the second QRP project taken from 101 EASY HAM RADIO PROJECTS,
by Robert Brown and Tom Kneitel; again, since the book is out of print,
I assume there will be no copyright problems...
This project is a simple 20 meter CW xmtr with output about 100 mw (?).
Here are the authors' comments:
"If you have always wanted to try low-power on 20 meters, here is an
excellent method for joining the growing ranks of flea-power addicts -
and doing it inexpensively. This circuit is capable of world-wide QSO's,
given the right conditions and assuming QRM is not present.
"The transmitter uses a pair of GE-1 universal replacement transistors
in a unique circuit configuration a great more sophisticated than you
would normally expect for an under-one-watt rig. Crystal can be a
fundamental 14-mHz type.
"L1 should be adjusted for sure-fire oscillation every time the
key is depressed. C4 is simply adjusted for maximum output on the FSM."

PARTS LIST:

C1, C2 .02 uF capacitors
C3, C5 .002 uF capacitors
C4 51 pF variable capacitor
L1 38 turns of No. 22 enameled wire on a 1/2 in. diameter
slug-tuned form
L2 8 turns of No. 22 enameled wire wound over cold end of L1
L3 Coil, 17 turns of Air Dux 616T (or equiv.) tapped 5 1/2
turns from cold end
L4, L5 2.5 mH rf choke (National R-100 or equiv.)
M1 1.5 volt dry cell

M2 6 volt battery
M3 14 mHz crystal
Q1, Q2 GE-1 transistors
R1 180 ohm resistor
R2 1.1 megohm resistor

As before, rather than trying to `draw' the symbol for each component, I've just inserted the part number. Oh, note the polarities of the batteries M1 and M2. GND = ground, ANT = antenna, E = emittor, ANT C = collector, B = base, KEY = well, this is a CW rig.... |



Note that the collector of Q1 `jumps' over the hot end of L2; this is the only jump. * = a junction of 3 or more leads.

.... .- ...- . ..-. ..- -. !

The excerpts below may cast some light on the above post.

United Press International 1993
November 6, 1993, Saturday, BC cycle

DATELINE: BEIJING
BODY: China's highest leaders have issued new regulations restricting
access to radio frequencies in the latest of a series of moves to assert
control over media, a state-run newspaper reported Saturday.

The order, approved by President Jiang Zemin and Premier Li Peng, was designed to end ''disorder in the management of radio communications, the use of frequencies and establishment of radio stations,'' the official China Daily said.

''Those found operating radio stations and using radio frequencies without official approval will be subject to inspection and punishment,'' Wu Jichuan, minister of posts and telecommunications, told the newspaper.
The regulations legalize the state's monopoly over radio communications, including mobile telephones, pagers, telecommunications, and radio and television stations.
The article did not specify when the regulations would become effective.
''All radio stations, whether run by individuals or units, must obtain approval from radio management committees and observe the new 10- part regulations,'' the article said.

The regulations were the latest in a recent spate of edicts aimed at controlling both broadcast and print media.

1825. repeater viability during Northridge quake

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-20 03:55:30 UTC
From: rob@xyzoom.info.com
Message-ID: <1994Feb20.035530.29010@xyzoom.info.com>
Source record: 270976

I would like to know how the repeaters around Los Angeles held up immediately after the recent Northridge earthquake. So many machines are listed as having emergency power in the repeater handbook, yet I don't know if these repeaters will switch over to backup power automatically....

Does anyone have information on this? thanks.

1826. Hamvention Parking

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-20 04:50:25 UTC
From: dsharp@netcom.com
Message-ID: <dsharpCLIAs1.HIq@netcom.com>
Source record: 270977

After reading the previous threads of gloom and doom about Hamvention parking and lack of bus service, I received the annual flyer in the mail today advertising the Hamvention. According to this flyer the situation shouldn't be near as bad as some ppl have predicted. The paragraphs I've reproduced below should be of interest to some:

Parking...
There are approximately 8000 privately owned pay-to-park parking spaces near Hara Arena. We have again arranged for free parking at Forest Park, Salem Mall, Dayton Mall, Mendelson Electronics, the Meijer store at Route 48 and I-70, and at the Air Force Museum.
Campers, trailers (self-contained vehicles) or vehicles that require more than one space will _not_ be permitted to park in the Flea Market or at the Salem or Dayton Mall. Campers and trailers may park at Tall Timbers KOA or at the Miami Valley Technology Center (formerly Montgomery County Joint Vocational School-JVS), after 3:30 P.M. on Friday and all day Saturday and Sunday.

Free Bus Service...
There will be Free Bus Service provided between Hamvention and our satellite parking areas which include Salem Mall, Forest Park Plaza, Mendelsons, Meijer (Route 48 and I-70), Air Force Museum, Dayton Mall, KOA campground and the Miami Valley Technology Center (formerly Montgomery County Joint Vocational School-JVS). In addition, some motels may offer transportation to Hamvention.

I'm not affiliated with DARA or the Hamvention in any way... I'm just passing on the information I recieved in the mail today. All flames will be directed to /dev/null.

k

Why not? You'll defend a pirate who posts 6MHz air-to-ground frequencies on rec.radio.cb in answer to a query posted by an other pirate as to what frequencies other illegals were using outside of 11M. Don't sound so high and mighty on here Dana while at the same time defend illegals posting (inviting?) pirate operation on air-to-ground channels.

Oh, and let's not forget your coming to Shoup's defense (December) after I chastised him for stating he was going to put a 5kw xmtr on the ham bands.

Make up your mind as to which side of the law you stand on.

OMETEPE (NICARAGUA) 94 DX EXPEDITION
February 25,26,27, 1994

The island of Ometepe is located in Lake Nicaragua, the third largest lake in Latin America. It is said to be the largest island in the world within a lake. The island is dominated by two volcanos, 1610 meter Concepcion, and 1394 meter Madera, and has a population of 35,000 people living within its 266 square km. area.

The following is excerpted and translated from a message from YN1TV to N1AW (YN1ASW):

On the island of Ometepe there are no radio amateurs, which is a big problem for those OMs who want a QSO with all the islands of the world. This is the reason we are going to invade Ometepe and attempt to put it on the air on HF using packet, RTTY, CW, and SSB. The expedition will camp at the place known as San Marcos, 8 km from Moyogalpa, on the shore of the Great Lake of Nicaragua. It is an ideal location for experiments with antennas.

The expedition will be on the air from 0000 UTC Friday February 25, 1994 until 1100 UTC Sunday February 27.

The call for this DXpedition will be H70O Hotel Seven Zero Oscar, which has been officially solicited for the Club de Radio Experimentadores de Nicaragua (CREN).

Arrgh, I knew that. Signal drops with the *square* of distance, so it's
6 db per doubling. The 119 db figure is correct though. The biggest loss
happens in that first mile.

>: a 40 foot mast. So pure LOS is pretty much a mountaintop to mountaintop

I think that my point here is that LOS paths aren't practical for most
amateur data links. The ability to get LOS paths is very terrain specific,
and very $$$ specific. They either require fortuitous high sites, or
very expensive microwave towers.

>: > While it's true that you would need line-of-sight, I think most

I agree it isn't practical to get multi-megabit systems below the microwave frequencies. What I think you're overlooking is the physical and financial impossibility of building the number of short hops that LOS requires in most of the country in order to do the higher rate channels. Amateurs can't do like the phone company and put up million dollar relay sites every 15-30 miles. The expense isn't in the equipment, it's in the *sites*. Amateurs don't have eminent domain, or the financial resources of a major public utility. Amateurs are going to have to accept lower data rates in order to stretch out the distance between available sites enough to make the system practical.

>: That gives us a margin of 95.87 db. Looks like we can easily tolerate

>you can lose a lot of the *potential* performance and still function.
>For that matter you can run 60 wpm rtty on HF across great distances if
>that's your goal.

Yes, 60 WPM RTTY has been within *individual* amateur reach for a long time. But we can do better. With a *lot* of cooperation and group effort, we should be able to do a 56 kb national network of 300-500 sites. We can't possibly do the 3000-5000 sites needed for national microwave linking. (The California coast, and a few other fortunate areas with access to strategically located mountains overlooking high amateur population density areas, may be able to do that, but not the rest of the country.)

> My point is that once you try to get economical performance at high
>information rates you can't afford to throw away power into poorly
>engineered paths and that the economics greatly favor microwave over vhf
>for wireless systems.

Power is cheap. Sites are few and expensive. We have to be able to use the sites *we can get* to build the network. Unlike a public utility, we can't just go out and condemn ideal sites where we need them for our microwave links. All of our path engineering has to revolve around what we can do with the sites we can get.

>: >Also, at high information rates, the additional multipath and path :

>And that's about what it takes if you are talking about medium speed

>information (though I suspect the military stuff was more or less audio
>bandwidths).

The link budget calc I did showed that a 90 mile forward scatter path
has a path loss of 198 db at 219 MHz for a 56 kb bandwidth. That's doable
with ordinary amateur beams and brick amplifiers, given the sensitivity
of existing RF modems.

>: Now back to the real world. We have a 90 mile 70 cm path between Sweat
>: Mtn and Scaly Mtn that is not line of sight. It works with very few
>: retries. We're using 19 db antennas on each end, and our mean HAAT is

>: in downtown buildings and suffers severe multipath (and desense from
>: commercial equipment too). The tighter beamwidth of your system would
>: probably be a win here.
>
> Your second 21 mile link obviously *isn't* LOS!

Yes it is. We can *see* the antennas at each end.

>Local clutter is probably degrading things severely.
>Antennas help a lot (2 dB of system improvement per dB of antenna gain)
>but a poor path degrades things much faster than antennas can fix it.
> That "nestled end" that you call line-of-sight is clearly far from it.
>See my comment above about most practical links losing 15-40 dB as
>soon as they leave LOS. Your link is probably an example of this.

The problem we have is severe multipath because the beamwidth of our
antennas illuminates buildings on either side of the path. That same
path *does* work at 7 GHz because we have a commercial link there using
6 foot dishes at each end that does not suffer multipath. The narrower
beam doesn't illuminate the multipath generating reflectors.

>: To summarize, if we could depend on having LOS paths, a 10 GHz system
>: would be ideal, but in the real world we probably can't afford the
>: number of hops that would require (except in special terrain cases
>: like the California coast with it's mountains overlooking the population
>: areas), and 219 MHz calculations seem to show it will suffice using

>hams in "investing". Even now it is difficult to convince people
>that ham radio is neat for information age services when a 14.4 kbps
>or 28.8 kbps modem is so cheap and provides so much performance
>*to the user* compared to anything AR has to offer.

Well I agree we can't compete with the phone company. Their resources
are vastly greater than anything we could muster. But we can do a *lot*
better than 1200 baud for our users. And *that* horribly slow speed has
been enough to interest 20% of our ham population sufficiently to make
packet their primary operating mode, and has been enough to get hundreds
of high site nodes and digis installed around the country. With those sites
in hand, we can do a pretty good job of upgrading the network to 56 kb.
That's a 47 times improvement over what we've got. We can do that for
about $8 each per year from active packeteers, and a lot of volunteer
labor.

The highest traffic flows are on the user MANs. In some cases where
local topographic conditions permit, those MANs could be shifted to
higher speed. But for the intercity trunks, I don't think we can do
megabit microwave trunks nationwide. There are just too many miles
where there are no hams, and no suitable sites for the asking. Current
inter-MAN traffic demand doesn't justify it even if we could do it,
but I suspect that "build it and they will come" would be in effect
if we could possibly do it. I just don't see any way we could get
the sites. Even if the telcos *gave* us their old microwave sites,
I don't think we could find the manpower to maintain them.

>Would someone please give me some general information about mobile ham
>radio, and repeaters, or point me to an FAQ. Specificly, I would like
>to know...
>
>- Can mobile amateur radio stations operate in full duplex?

Yes. It requires an in-car duplexer to do it in the same band, but
crossband is easy.

>- Can repeaters in fact be used to place local telephone calls? If so,
> is there a charge for this service? Is it limited?

Yes. Phone patches are a regular part of many repeater systems, not full
duplex however. The clubs that support these repeaters generally want you
to join if you make regular use of their machine. Dues costs per year run
$20 and up for typical clubs. There are limits placed on phone patches
by the third party and non-commercial rules of amateur radio.

>- What are the legal restrictions on amateur radio traffic? Are data
> connections allowed?

Amateur radio can't be used for your regular business communications.
There are language content restrictions. And third party rules apply.
The latter basically eliminate "reverse autopatch" where incoming
phone calls control the repeater transmitter. That's because there's
usually no way to assure that the incoming call is under the control
of a licensed amateur. Basically, autopatch usage should be considered
"out dial" only. Amateur data transmissions are allowed, though that's
generally not done through phone patch links. That's for a couple of
reasons. First the phone patches were put up for voice use by their
owners, so that's what they want them used for, and second because the
patches are generally half duplex, so normal telco modems don't work.
Generally, amateur data transmission is done on a separate network of
nodes via packet transmission. The same content and third party
restrictions apply to packet as to phone patches.

>- What baud rate could I reliably connect at through a radio link?

The majority of the existing packet network is at 1200 baud, with some
nodes operating at 2400 or 9600 baud, and even a few at 19.2 kb. There
are faster systems, but they aren't yet in widespread use. There are
some networks running at 56 kb, and there are experimental systems at
megabaud+. There's also a long haul HF network operating at 300 baud.
Since packet is store and forward at the packet level, and since there
are many "bbs" systems on the network that can do store and forward on

the message level, You can send Email over national and international distances, but applications requiring high real time throughput are limited to the local area for the most part because of the low throughput of multihop packet transmissions over the existing node network.

David Dodell (david@stat.com) wrote:

> I will be taking a trip to Scandanavia in the near future ... can anyone
> fill me in on the VHF/UHF repeater situation?

Here is the band plan for Finland and as far as I know this should apply
to other Scandinavian countries too.

145.200 - 145.575 FM-simplex, 145.500 is the calling frequency
145.600 - 145.775 Repeater outputs, inputs at -600 kHz.

433.400 - 433.575 FM-simplex, 433.500 is the calling frequency
434.600 - 434.975 Repeater outputs at -1.6 MHz

1297.000 - 1297.475 Repeater outputs, inputs at -6 MHz
1297.500 - 1298.000 FM-simplex, 1297.500 is the calling frequency

All channels are at 25 kHz steps.
A 1750 Hz tone is required to initially open the repeater.

>to actually build a separate HF linear amp. Specifically I'd like to know if it is possible to drop a different transistor into
>place and change the current limiting resistor of the final stage, provided the transistor is carefully selected, and get an
>increased power output?

Well it's usually not quite that simple. Sure it's possible to modify an existing PA to output more power. But the key things are impedance matching and drive levels when changing out the PA transistor for a higher power one. The output impedance of a power transistor is a function of the circuit load line. That in turn is a function of stage voltage, usually fixed at 13.8 volts for typical mobile equipment, and stage output current, a function of drive and transistor beta. So, with the voltage fixed, you have to generate more output current to make more power. R=E/I so more current means a lower output impedance. That in turn means modifications to the output matching network to translate that impedance to 50 ohms.

In fixed equipment, it's often possible to go to a higher supply voltage, say double that of the original stage, and if the transistor beta and drive level are sufficient to also double current output, then your load impedance can remain the same, and the output matching network doesn't have to be modified while your power has increased fourfold. Note however, that input impedance to the active device will also often be different after you change devices, and that has to be matched as well.

>Another thing about transistor selection, will a VHF transistor work well in a HF circuit?

Device gain usually doubles for every octave reduction in operating frequency. VHF transistors can have so much gain at HF that stage stability can be hard to achieve. Other than that, for Class C operation, use of VHF rated transistors in HF circuits is doable. You do have to watch out somewhat more carefully for VHF parasitics. Most VHF transistors are not rated for linear operation, so Class AB1 or B uses may have higher levels of distortion products than a device designed for HF linear service.

1843. HTX-202 or HTX-404

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-20 17:00:58 UTC
From: "Michael A. Hotz" <mahjmac@delphi.com>
Message-ID: <hUwq2cy.mahjmac@delphi.com>
Source record: 270795

I am a scanner enthusiast, and am now interested in getting into amateur radio since listening to the local "hams" on my scanner. I have a couple quick questions, some of which may even be in a FAQ if it exists, but I'll throw them all out here, since I know you are the people to ask.

1) To get started, I'm considering a portable that I can get quick. I'm considering the RS HTX-202 and HTX404, but I don't know the difference between the two "bands", which is more active, which is better.

2) I often hear about amateur repeaters. I know what a repeater is, and how it works, but is my understanding that there are repeaters installed for use by amateur radio operators correct. Who installed them, who can use them, and what does it cost.

3) Finally, my wife works near Dayton, Ohio during the week, and we live near Toledo. If we both had HT-202 or HT-404 's, could we communicate with each other. Not without repeaters, I'm sure, so I guess this question involves the repeater questions.

Thanks for sharing your knowledge and experience!

MAH

1844. New 2m radio

OK. I need some advice. I'm returning to the air after a long absence and would like recommendations on what type of 2m vhf-fm radio to purchase. I desire portability, so that probably means an HT. In addition to brand names, what features should I get -- at a minimum, as well as "nice to have" for future operation. I travel by vehicle around the SE US, so will need to be able to access many different repeaters. So, what do you say?

The following excerpts may shed some light on the questions raised--

United Press International 1993
November 6, 1993,

China's highest leaders have issued new regulations restricting access to radio frequencies in the latest of a series of moves to assert control over media, a state-run newspaper reported Saturday.
The order, approved by President Jiang Zemin and Premier Li Peng, was designed to end ''disorder in the management of radio communications, the use of frequencies and establishment of radio stations,'' the official China Daily said.

''Those found operating radio stations and using radio frequencies without official approval will be subject to inspection and punishment,'' Wu Jichuan, minister of posts and telecommunications, told the newspaper.
The regulations legalize the state's monopoly over radio communications, including mobile telephones, pagers, telecommunications, and radio and television stations.
The article did not specify when the regulations would become effective.
''All radio stations, whether run by individuals or units, must obtain approval from radio management committees and observe the new 10- part regulations,'' the article said.

[G3RUH/DB2OS/VK5AGR]

FO-20: The FO-20 command station announced that a slight mulfunctioning in the onboard command system had been detected. So, the analog mode operations arranged from 9th of Feb. will be performed on schedule, but there is a possibility of interruption due to commading. The present schedule is as same announced before.
ANALOG MODE:
23-FEB-94 8:05 -TO- 02-MAR-94 6:40 UTC
09-MAR-94 7:05 -TO- 16-MAR-94 7:30 UTC
23-MAR-94 7:52 -TO- 30-MAR-94 8:15 UTC
DIGITAL MODE: Unless otherwise noted above.
[Kazu Sakamoto (JJ1WTK) qga02014@niftyserve.or.jp]

AO-16: Operating normally. Experimenter's Day with S-Band transmitter on will be run on 02/23/94 03:45 UTC to 02/24/94 03:15 UTC. Whole Orbit Data (WOD) collections each month by week are: 1) Solar Array Currents, 2) Temperatures 3) Power/Bus Voltages 4) Various telemetry parameters to be determined by the Command Team.
[WH6I & WJ9F]

LO-19: Operating normally. [WH6I]

KO-23: Up and running. [WH6I]

KO-25: BBS up and running. [WH6I]

POSAT: Definitely seems to be turned off on the amateur frequencies.
[WH6I]

IO-26: Is back up and running (1200 baud) and seeing a lot of use. [WH6I]

AO-21: LW2DTZ reports that the RUDAK-II beacon was sending the following information: RUDAK2>BEACON:RUDAK-II Schedule: (down 145.987 MHz, up 435.016) min/10 Beacon Mode
0..4 FM Repeater
5..7 WEFAX Picture
8..9 AFSK TLM

LW2DTZ further notes that AO-21 is very active with hams from south of Brazil using this crossband repeater. [LW2DTZ]

MIR: MIR is working normally in 145.550 MHz. R0MIR and R0MIR-1 Personal Messaging System (PMS) are active on all the orbits. [LW2DTZ]

RS-10: ZS6AOP reports that RS-10 is still operating normally at his QTH. He notes that there are a handful of regular stations keeping the contacts going but recently he has experienced a quiet spell, only hearing himself. ZS6AOP wonders what the preferred mode of operation is over Europe and the USA? Do any stations use CW? The only times has heard CW over Southern Africa is for tuning and spotting one's own signal. [ZS6AOP]

UO-11: ZS6AOP has been monitoring this satellite at regular intervals. It is his observation that the signals are weaker today than before the on-board computer "crash" several months ago. [ZS6AOP]

The AMSAT NEWS Service (ANS) is looking for volunteers to contribute weekly OSCAR status reports. If you have a favorite OSCAR which you work on a regular basis and would like to contribute to this bulletin, please send your observations to WD0HHU at his CompuServe address of 70524,2272, on INTERNET at wd0hhu@amsat.org, or to his local packet BBS in the Denver, CO area, WD0HHU @ W0LJF.#NECO.CO.USA.NOAM. Also, if you find that the current set of orbital elements are not generating the correct AOS/LOS times at your QTH, PLEASE INCLUDE THAT INFORMATION AS WELL. The information you provide will be of value to all OSCAR enthusiasts.

/EX

: transmitter right up through their kit 2-m HT, and had _very_ few problems
: 73 de John Taylor W3ZID

My last Heathkit was their small one-transistor 2m linear, can't remember the part number. The collector, base, and emitter were shorted together on the original printed circuit board because the transistor hole was drilled too small. It blew up my Wilson HT.

Any kit company has disgruntled customers. Of the six kits that I bought from Heathkit, only the digital clock worked from the start. My HW101 had something like a cold solder joint or cracked trace that I couldn't find and Heath couldn't find. I sold it for spare parts.

>>operation of radios with illegal harmonic outputs on sensitive aero bands.
>
>Why not? You'll defend a pirate who posts 6MHz air-to-ground
>frequencies on rec.radio.cb in answer to a query posted by an other
>pirate as to what frequencies other illegals were using outside of
>11M. Don't sound so high and mighty on here Dana while at the same time
>defend illegals posting (inviting?) pirate operation on air-to-ground
>channels.

This really isn't worth a response, much less one to the Usenet, but I'll make one attempt. Jeff Herman has engaged in pattern of attempting inflame newsgroups, by posting such inflammatory notes. This is my only response, since my experience with people exhibiting the conduct I see in Jeff is that they'll go away if you ignore them.

For what it is worth, on rec.radio.cb, I *did* post note suggesting that Jeff's threat to report an SWL to the ITU was frivolous. In fact, I attempted to point out that there was no evidence that this alleged "pirate" Jeff talks about was anything but an SWL.

>Oh, and let's not forget your coming to Shoup's defense (December) after
>I chastised him for stating he was going to put a 5kw xmtr on the ham
>bands.

Mike Shoupe did state he had a couple of 5KW AM transmitters he intended to place on the ham bands, when his license permitted. From the context, it was suggested that Shoupe intends to abide by the regulations of his license class. Next thing we know, Jeff Herman is posting a series of notes condemning Shoupe as an "outlaw" and "scofflaw". It is certainly the case that a high-powered transmitter may be operated at reduced power, often with improved performance. It is also the case that Mr. Shoupe may not yet be aware the AM power limits are less than the oft talked about 1.5KW output limit.

>Make up your mind as to which side of the law you stand on.

I stand on the side of compliance and respect for the rights of individuals. For some reason, Herman feels compelled to carry on a campaign against any Usenet poster who even suggests something that is contrary to law, and Jeff feels compelled to carry on a campaign especially against me, on several occaisions quoting me out of context and making completely false assertions with regards to me.

For the record, I oppose any kind of illegal radio operation.

For the record, I oppose the violation of legal and ethical rights of people.

If Mr. Herman wishes to condemn me for this stance, fine. However, I do not believe this kind of personal vendetta is appropriate for a newsgroup. If you have further questions or comments on the issue, please feel free to write to me at:

Dana.Myers@West.Sun.Com

If you have any questions or comments for Jeff Herman, his e-mail address is:

jherman@Hawaii.Edu

Thank you,
Dana

SB DX @ ALLBBS $OPDX.148
Ohio/Penn DX Bulletin No. 148

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 148
BID: $OPDX.148
February 21, 1994
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, ARRL DX Bulletin, DL7VEE & DXNL, DF4RD, ON7GB, VP2ML, NT2X, K4CEF & Southeastern Cluster Group, WA6YOU and AH9B for the following DX information.

3Y0PI, PETER I ISLAND (UPDATE). (ed.- A DXpedition of "EXCELLENCE") Now that the 3Y0PI operation is history, there is only one word to describe this DXpedition, "SUPER". Making 60,000 QSOs, the Peter I DXpedition team (Ralph/K0IR, Tony/WA4JQS, Bob/N4GCK, Bob/KK6EK, Terry/W6MKB, Willy/HB9AHL, Peter/ON6TT and Martin Tosseyn, a Belgian, who is a non-ham, but acted as campsite manager looking after the tents, food and generators.) should be commmended for a well organized operation despite set backs, such as being hit with major snow storms, equipment being damaged during their landing on the island and the storms freezing generators and damaging antennas. But members of the team were technical enough to repair some things so all operations were not lost. The operation has officially gone QRT February 16th, but as this bulletin was being written during the weekend some of the team remains on the island. Extremely bad weather has hampered efforts to get the team off the island. A fax sent to WA4JQS's mother, Ada, from the Russian ship which is picking up the 3Y0PI operators indicated the following: At 2315Z February 18, only two operators (K0IR and HB9AHL) had made it to the ship via only one helicopter run.
1. Very slow evacuation from the island because of bad weather (too much fog). Helicopter flights very risky and difficult.
2. Two operators are already on board the Russian vessel. Only one flight was possible yet.
3. Everybody is OK and waiting for better weather.....
Once the 3Y team is safely aboard the Russian ship, they will be taken to Puntas Arenas, Chile to take flight home, instead of a long sea trip home. (UPDATE February 20th at 0001z: Operators still on the island and they are now in a middle of a tremendous blizzard. Currently, very little equipment has been taken to the Russian ship and all are doing fine. In

case of extreme emergency, they will evacuate the island leaving all equipment behind.) (Another UPDATE just before going to print: A fax sent Sunday morning indicated that 5 of the operators and half of the equipment from the DXpedition are now safely aboard the Russian ship. Tony, WA4JQS, and 3 others operators still remain on the island, but all are expected to be completely off the island by 1700z Sunday.) OH YEA! There is one more group to be commended during the 3Y0PI operation and that would be the amateurs (DXers/Non-Dxers) all over the world. The amateurs of the world were on their best behavior, EVER, during this DXpedition. There were no real major problems of deliberate interference or an overabundance of policemen on patrol (only a couple of minor infractions). This can be attributed to the amount of 3Y0PI stations operating at the same time and the amount of spectrum they used. It is a shame that most DXpeditions are not well thought out (ORGANIZED) and planned like the 3Y0PI.

HS, SAMUI ISLAND - IOTA AS-101 (THAILAND). A group of Thailand amateurs will activate this island sometime in March, no specific dates were mentioned. Samui Island is located in the Malay Peninsula North East group and has not been active for two years. During the operation the operators will pay special attention to the WARC bands. Operators are only allowed to operate on these bands with a special licences and can only obtain these licences for special occasions (such as an IOTA activity).

KH8, AMERICAN SAMOA. Andy, G4ZVJ, will be active from February 16 thru March 16, as AH8F. He will be active mostly on CW, only little SSB and RTTY.

KP5, DESECHEO ISLAND. Bad news! The ARRL DX Buletin and other sources report that the upcoming DXpedition for the SSB weekend of the ARRL International DX Contest has been cancelled. The U.S. Fish and Wildlife Service has denied landing permission because a group of Haitian squatters are on the island. The Coast Guard was unsuccessful in removing them, and reports are that the U.S. Navy may be called to remove the group. Until this situation is resolved, no landing permission can be given. AB4JI and crew hope to make last minute arrangements to operate from another island.

PY, BRAZIL. PY0A and PY0B will be active from Abrolhos Archipeligo (IOTA SA-019) from February 23-28. This island is located in the Bahia State South group and will only count for Brazil. Activity will be CW/SSB on 10-80 meters. QSL to Roberto Stuckert PT1GTI, P.O. Box 09647, 70001-970, Brasilia DF Brasil.

T5, SOMALIA. Ron, WA6YOU, will be active from Mogadishu from February 24th thru March 4th (Information was not clear. It may be March 24th thru April 4th). He will sign T5YOU and will be active on a time available basis from 1800-2000z daily. Due to location constraints, his rig will be an Icom 735 and a dipole antenna. Ron will attempt to operate on the usual DX splits on 15/20 meters SSB only. QSL to WA6YOU direct.

TI9, COCOS ISLAND (UPDATE). Members of OKDXA and the Young Gunners DX Foundation are in the final stages of planning a May 94 DXpedition to Cocos Island. The trip will last for 10 days beginning around the 2nd week of May. Transportation has been obtained, permission to land and operate has also been granted. This will be a full-scale, multi-national effort with about 12 ops. There will be six stations, including one dedicated satellite and another to RTTY. Heavy emphasis will be given to CW and WARC bands. The co-leaders of the team are Javier/AH6MM and Craig/AH9B. Other operators include V73C, AD1S, TI2JJP, XE2CQ, NH6UY, N5MIH and Dr. Pete/N0AFW. QSLs will be handled by OKDXA, Box 88 Wellston, OK 74881.

WORLD NEWS..... A rumor is circulating around 20 meters that Voice of America had a report on the air that all BY hams have been rounded up and sent to labor camps. Apparently, they were charged for "listening to unauthorized frequencies". No more info is available on this one, but there has not been any BY QSN reports on the Ohio/Penn Network since February 1st. Hope it is not true. (This information from KN4QS.).... ..... According to Ed, NT2X, the Reuter news agency had a report on the Spralty Islands (which are contested by several nations). The report states that two of the countries which contest the islands, China (PRC) and Taiwan (ROC), will have a joint scientific expedition that will explore the Spratly Archipelago. A Chinese oceanographic vessel will carry a team of scientists, including 9 ROC citizens. This is a first such joint trip since the end of the Chinese civil war in 1949. There were no details when all this takes place, and obviously, this is not amateur radio related, but perhaps the BV and BY stations may find a way to put a different twist on a Spratly DXpedition in the future.

XF4, REVILLA GIGEDO. Hector, XE1BEF, and others plan to activate XF0C, from February 18 thru March 4. Activity will be all bands 160-6 meters on CW/SSB/RTTY. QSL via XE1BEF.

ZS0, PENGUIN ISLANDS. Just a reminder to begin looking for Baldur, DJ6SI, and others as ZS0X, February 23-28. This will probably be the last ZS0 operation to count for DXCC. Word has it that Baldur and crew will stay after the 28th and use V5 callsigns.

FAX YOUR DX INFORMATION NOW! Faxing is available Monday/Wednesday/Friday from 0430 to 2330z only. The number is 216-237-8208 and the FAX card is sharing the same phone line as BARF-80 BBS using a data/fax/phone switch.

Excerpts and distribution of The OPDX Bulletin are granted as long as OPDX/BARF80 receive credit. NOTE: The Effective Sunspot Number for 17 FEB 94 was 45.0.
The Full Kp Indices for 17 FEB 94 are: 2- 2o 3- 3- 2+ 2+ 2o 2-
The 3-Hr Ap Indices for 17 FEB 94 are: 6 8 14 11 10 9 8 7
Greater than 2 MeV Electron Fluence for 18 FEB is: 4.2E+08

SYNOPSIS OF ACT

Solar activity was low. Region 7671 (N11E15) produced a
C1/0F flare at 18/0542Z. A 5 degree filament near S20E05
disappeared between 17/1857Z and 18/1218Z.

Solar activity forecast: solar activity is expected to be
low through the period.

The geomagnetic field has been at quiet to unsettled
levels for the past 24 hours. High latitudes experienced some
active levels during the period.

Geophysical activity forecast: the geomagnetic field is
expected to be unsettled for most of the period due to
coronal hole effects. Quiet to unsettled conditions are
expected by the end of the period.

Event probabilities 19 feb-21 feb

Class M 10/10/10
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 19 feb-21 feb

A. Middle Latitudes
Active 25/25/20
Minor Storm 15/15/10
Major-Severe Storm 05/05/01

B. High Latitudes
Active 25/25/25
Minor Storm 15/15/15
Major-Severe Storm 05/05/05

HF propagation conditions were generally near-normal over
all regions. Conditions should continue near-normal over the
next 72 hours, although high latitudes may see some sporadic
minor signal degradation due to possible effects from a coronal
hole.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

Dana Myers (myers@pongo.West.Sun.COM) wrote:

: Oh, Cecil, give it a rest.

Hi Dana, I appologize to you and anyone else who took this posting seriously. It was pure sarcasm to demonstrate an unethical, uncivilized (less than human) posting. I called it ridiculous in the posting. How many times have I asked you to keep this discussion technical?

: You've worked hard to discredit my statements...

Nope, it wasn't hard.

: Then you try the very behavior you condemned Jeff Gold for.

The behavior was a joke, OK? I asked Jeff if he wanted to see an unethical person and handed him a mirror.

: What you fail to acknowledge is that the public dealings of an
: amateur business is a perfectly valid topic for rec.radio.amateur.misc.

I agree 100%. But public allegations of what was allegedly said in private telephone conversations are not proper topics for this group unless you guys legally taped the conversations. There is no way to prove that you are telling the truth or are out on a personal vendetta for imagined mistreatment. And at this point, unfortunately, it does not matter if you were telling the truth or not. The damage is done either way.

And, by the way, I would never call anyone a liar, except in jest. Civilized people do not call another person a liar. Civilized people give the benefit of the doubt or doubt what one says is true.

: You're missing the point entirely! Either that or you refuse to see it.
: * Dana H. Myers KK6JQ

One more time... this is a technical group. This discussion started when Jeff knocked (for the Nth time) the FTR-146 and objected to the way he was allegedly treated by Ramsey Electronics two years ago. He should have posted it under a Ramsey Electronics heading, identified the product and alleged experience as being two years old. Two years can make a big difference and is a long time to carry a personal grudge. I called Jeff a liar in jest but I would like him and/or you to swear the he/you have never lied... does that mean that you two are liars?

Maybe you should ask Jeff if he would like to see this negative thread about him continue indefinitely. We are wasting a lot of time and energy that could be used helping other hams on Internet.

One more time... The Ramsey FX transceiver problems are all known and there are fixes for every one of them. They exist in a MODS directory on Internet and I will look up the server. I do not know anything about any other Ramsey products.

Jesse, I'm no legal expert either, but your dictionary agrees with me. John's alleged statements during a private telephone conversation did not injure the reputation or well-being of Jeff. Dana may have injured Jeff's reputation or well-being by revealing the alleged contents of a private telephone conversation. There is no doubt what happened the other direction.

What do you say? How 'bout we both get a technical life.

NOW I understand your stance, Dana; now I understand why you continue to come to the defense of suspected illegals.

Hmmm, I wonder if there might be a bit of piracy in your past. That might explain your defending those I chastise for promoting illegal operations. Maybe you're feeling a little guilty?

And don't say ``Get over it Jeff'' because now I will always suspect your past.

Nice try Dana, but you're the one who seems to follow me from one news-group to another commenting on MY posts. You're the one who wants to play the role of Public Defender. Inflame newsgroups? Nope. But I'm not going to hide my head when I suspect someone has broken the law.

Recall I was a radio officer in the U.S. Coast Guard. I am VERY sensitive when I suspect foul play in the air. For years at Group Monterey Station we had to put up with jamming on 2182 kHz (world-wide MF voice distress frequency) and occasionally even on VHF ch16. I didn't put up with it then and I won't put up with it now, whether it occures on or off the ham bands.

If you see me chastising someone for suspected illegal operation, feel free to hit the `n' key. But If you're going to attack me, expect to receive a few comments yourself.

It seems ``you can dish it out but you can't take it''.

>

No Myers, you're the one with a vendetta. ``Get over it.''

>and making completely false assertions with regards to me.

Not true. ``... completely false assertions...'' is completely false.

>
>For the record, I oppose any kind of illegal radio operation.
>
>For the record, I oppose the violation of legal and ethical rights
>of people.

Good. Then disregard this need you have of coming to the rescue of
those who I suspect and chastise for illegal operations. Let them
defend themselves. Twice on rec.radio.cb you've felt the need
to defend someone (the linear amp thread and the 6MHz air-to-ground

frequencies post) that I took exception to. Leave me alone and
I'll do the same.

>
>If Mr. Herman wishes to condemn me for this stance, fine. However,
>I do not believe this kind of personal vendetta is appropriate for

Hmmm, when I mentioned the personal vendetta you had against me back
in December, you're response was, I believe, `get over it'.
Again, if you want a truce then let the suspected illegals defend
themselves.

1863. Re: New QRZ! Ham Radio Callbook CDROM: $15.95

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-21 00:07:13 UTC
From: adams@chuck.dallas.sgi.com
Message-ID: <CLJsC1.GwM@odin.corp.sgi.com>
Source record: 270815

I got the QRZ CDROM a month ago on the internet "special"
offered by Fred. This was the best use of money for ham
radio for under $20.

This CDROM should give Buckmaster and the others a run for
their money, since they are at the $50 level.

I use the UNIX (tm) version of the callbook. During one
run of 25 calls that I looked up for QSLs to stations worked
during a QRP contest, it took less than 3 seconds on a workstation.
I did this by creating a script with the lines
call k5fjz k5jkb ... (for five calls)
call xxxxxx xxxx xxx

with five calls per line, since the program halts every five for
<cr> as it assumes it's in an interactive mode from a terminal.

I plan on submitting the data base for ALL 180,000+ US cities
and a C program to do great-circle bearing calculations for the
next verions of the QRZ CDROM. The data base alone if more than
5MB!!!

Anyway, my $0.02 worth of publicity. I'm NOT paid for this
endorsement, just another happy satisfied customer.

There are a lot of other programs and data bases on the ROM,
but I haven't had time to play with them yet.

dit dit

The following is a QST

Another ham-band may wind up in the hands of commercial users and the idea of an instant ham radio license may be quietly fading away.

*****
200 MHz of SPECTRUM TO BE REALLOCATED - HAM RADIO AFFECTED!

Amateur Radio may loose part or all of one super high frequency band in the wake of the release of a Commerce Department report that recommends moving the military and other government agencies off much of the nation's airwaves to make way for new commercial use of the spectrum. The spectrum under fire

is at 2390 to 2400 Mhz and 2402 to 2417 Mhz. If the FCC chooses to reassign it to the commercial sector, its loss will impact on several important ham radio projects including high speed packet radio data relays.
The peril to the band became known on Thursday February 11th. In a preliminary report, the Commerce Department announced that it had targeted 200 MHz of prime VHF and UHF radio spectrum to be reissued immediately with an even bigger block to be made available over the next 15 years. This latter could include the ham radio band that runs from 2300 to 2310 Mhz. A band being looked upon in many crowded urban areas as the logical place to expand repeater and other FM relay operations as well as weak signal work.
This reallocation proposal is part of a major push by congress the Clinton administration and the National Telecommunications and Information Agency. The plan is to reassign valuable government spectrum to the private sector to expand all sorts of communications concepts. It also follows an earlier decision to reallocate another big band of spectrum to the next generation of wireless technology, known as personal communications services.
The Commerce Department report did designate certain specific spectrum to be shared by government and private sector users. It said that moving some government services will be delayed until new equipment can be built. As a result some of the reallocated spectrum will not be made available for several years. The study also concluded that moving some services would be inappropriate. This, because of extensive investments made by the government or the services provided by the current spectrum users. It recommended that certain navigational services, meteorology, astronomy and space communications services should not be moved.
There are two days of sunlight in all of this. First off, the Amateur Satellite band from 2400 to 2402 MHz was not put up on the chopping block. This means that plans for the construction of the new Phase 3D ham satellite can go forward as planned.
Second, and just as important is the fact that this is only an initial report. Kind of a prototype suggestion by the NTIA that is still open to debate. A final report on this proposed spectrum reallocation is scheduled for release after the Federal Communications Commission the and private sectors have a chance to comment on it. Completion of that research and release of the report should come in about twelve months. Meantime, hams involved in the use of spectrum at 2300 MHz and above should get ready for a knock down drag out fight to save that band.

*****
INSTANT LICENSING

The FCC's proposal to bring instant licensing to the amateur radio service appears to be in serious doubt. Comments by the Chief of FCC's Private Radio Bureau seem to leave open the

possibility that the proposal may never see the light of day. Ralph Haller, N4RH, spoke to amateurs at the Tropical Hamboree in Miami on February 5th.
Commission officials say they are surprised at the response to the FCC's proposal to bring instant licensing to ham radio. The idea is to allow people who successfully pass their first license exams to get on the air immediately. That way they would not have to wait to receive a license from the commission. A process that has taken as long as 3 months. The ARRL strongly opposes the FCC's idea. Frank Butler, W4RH directs the leagues Southeastern Division. He says amateurs are solidly against instant licensing.
"What their concern mainly is that people will get, make up a callsign and get on the air without ever really having ever taken a test." Frank Butler, W4RH, Director ARRL Southeastern Division.
Instant licensing the way the FCC proposed may not be necessary. The commission is about to upgrade its nearly 30 year old computer system. Ralph Haller, N4RH, says this promises to be much faster processing of license applications.
"I think the people have some legitimate concerns in instant licensing that we are going to have to look out very closely and combine that with our improved speeds of services I expect with the new computer and weigh wether instant licensing makes sense in the amateur service."
We seem to be leaving the door open for instant licensing the whole controversy could be taken care of with the new computer system.
"I think that's a reasonable possibility. Particularly as we get electronic filing with the VAX. We may well reach the situation individual exam sites would have immediate access to our computers and we might even be able to have a license, I am dreaming a little bit here, that we may well be able to issue, have the VE issue the license right in the exam session." Ralph Haller, N4RH, Chief of the FCC's Private Radio Bureau.
Haller says the commission will look at the responses amateurs submit to the instant licensing proposal. One that so far has little support in the amateur community.

*****
VANITY CALL SIGN UPDATE

Another big announcement from Ralph Haller. Vanity callsigns are just around the corner. Haller believes you'll be able to request a call sign of your choosing by late summer. The program will probably be brought on line in phases, with Extra class hams getting first crack. Club callsigns will also be available.
Start saving your quarters...a vanity call sign will cost $70... that's 7-dollars for each of the 10 years an amateur radio license covers.

*****
COURT ORDERS HAM OFF REPEATER

This just in. An Orange County California Superior Court has issued a three year restraining order against a ham that will keep him from operating on an area repeater. The order was requested in January by an attorney for the Clairmont Amateur Repeater Association and was issued against Tim Seawolf, KJ5KE of Quail Valley. This is a precedent setting case in that the club has used the civil rather than federal court system to ban someone from their repeater that they allege to be an undesirable operator. More details on this story next week.

*****
ARRL BOARD ELECTIONS

The ARRL Board of Directors has affirmed its confidence in the leadership of George S. Wilson, W4OYI by electing him to serve another two years as the organizations president. Wilson, an attorney from Owensboro Kentucky has turned out to be one of the most dynamic leaders in the leagues history. Before his election two years ago, Wilson made a public pledge to do all he could to help clean up the many problems plaguing the ham bands. We carried his words right here on Newsline in 1992. Wilson has since lived up to every word that he said!
Also returning for additional two year terms are first vice president Rod Stafford, KB6ZV, Vice Presidents Jay Holladay, W6EJJ and Tom Frenaye, K1KI. Treasurer Jim Mc Cobb, K1LLU, Executive Vice President Dave Sumner, K1ZZ and Chief Financial Officer Barry Shelly were also re-elected to serve the next two years.
Elected to the Executive Committee are Rocky Mountain division director Marshall Quiat, AG0X, Hudson Division Director Stephen Mendelsohn, WA2DHF, Delta Division Director Joel Harrison, WB5IGF and Great lakes Division Director Al Severson, AB8P.

*****
GEORGIA ANT

A bill introduced in the Georgia Legislature that would eliminate the effect of restrictive property covenants on amateurs is believed to be the first of its type in the nation. This, according to Georgia Section Manager Jim Altman, N4UCK. Altman says that the proposed legislation known as Georgia House Bill 1134, would prevent all new and renewed covenants from regulating, controlling, or restricting antennas owned and operated by licensed amateurs in the state.
Altman says that, in Georgia, all restrictive covenants have a life of 20 years, but can be renewed. In banning new and renewed covenants the proposed new law would leave the existing covenants in place until their natural expiration, and prevent new ones. Then, over the next 20 years, all existing covenants would disappear.

The bill was initially referred to the State Bar committee on real property law, which gave the measure a do pass recommendation. That's a good sign and Amateurs in Georgia are urged to contact their state legislators and urge their support of H.B. 1134. Hams elsewhere will want to watch this one carefully as it could set a national precedent for fighting deed restrictions nationwide.

*****
STONER UPDATE

Speaking about fighting deed restrictions, one ham who has been at the forefront of the battle is Don Stoner, W6TNS. As previously reported, Stoner, who heads up the National Amateur Radio Association has been fighting an antenna battle of his own. In addition to legal action, Don has taken to the political high ground as well. W6TNS is trying to get the Florida State Emergency Preparedness plan changed to include ham radio as an integral aspect and there-by negate anti ham radio deed restrictions in planned communities. We ran into W6TNS at the recent Tropical Hamboree in Miami and got this update.
"The condominium restrictive covenants are applicable all over the country. There are hams all over the country that are precluded from actually getting on the air, at least on HF, because of these restrictive laws. But the support from the local group in the Clearwater area, and really all over the state of Florida, has just been enormous. One of the things I think we can do is marshal that support and organize it into a packet letter writing campaign. I think hams will send packet messages to their legislator far easier than they will write a letter. They love to send messages over ham radio because that is what it is all about." Don Stoner, W6TNS, President of NARA.
Stoner also says that banning the prohibition on ham radio antennas is important to the safety of all of the residents of is regularly hurricane ravaged state.

*****
SEATTLE TROLLEY QRM

Seattle Washington hams are once again suffering from trolley car induced RFI. The story goes back a number of years when Seattle added a number of new electric trolleys to their fleet. According to Clay Freinwald, K7CR of the Western Washington Amateur Relay Association, the presence of these new trolleys was instantly noted as their new electronic control system radiated like an all band transceiver and the overhead cattinary system of power wires became their gigantic antenna.
Marty Hadfield a broadcast engineer at KMT
matter. Operating through the Western Washington Cooperative Interference Committee, Marty was able to get the Metropolitan Transit System to install filters on the vehicles to help

minimize the problem. The filters were not a cure all and you can still hear some of the interference on any AM radio. Recently, the transit authority purchased some dual powered vehicles. They run on diesel engines in outlining areas and then connect to the transit overhead wiring when inside Seattle proper. Marty Hadfield says that these new vehicles are not much different then the old ones. They too radiate like crazy and this time the interference is not limited to the AM broadcast band. He says that almost any radio in the downtown area can hear what sounds like a cats meow on any two way radio including those used by hams. Marty is trying to solve the problem, but it looks as if its going to be an uphill road till all of the meowing is gone from the Seattle radio airwaves.

*****
T9S DX

In DX, the special event station T9S will be active during the month of February to commemorate the 10th anniversary of the Olympic Winter Games of 1984, which was held in Sarajevo. Activity will be on all bands and QSL cards will be handled by DL1QQ, direct or via the bureau.

*****
PERRY TO BE AT DAYTON

Educator Carole Perry, WB2MGP says that she is looking for youngsters skilled in talking before large groups to be a part of her Youth Seminar at the 1994 Dayton Hamvention. The Staten Island New York school teacher will be expanding her youth session and says that more young hams are needed as speakers this year.
"Once again we are looking for youngsters who are articulate and enthusiastic about what they enjoy about amateur radio. I understand I am going to be getting an expanded time slot this year because of the popularity of the program last year. It seems that the session that always follows me, unfortunately always has to deal with us running over a little bit. So this year they have graciously given me a bigger time slot. I am looking for lots and lots of youngsters to be interviewed and have them call me at (718) 983-1416. That's my home number and the machine will pick up if I am not here. Or have them send resumes directly to me, I'm in the callbook. About what it is about ham radio that they have participated in and if they are good and articulate speakers we will certainly consider bring them to Dayton." Carole Perry, WB2MGP.
Again, if you know of an articulate young ham who would like to speak at Carole Perry's Dayton Youth Forum please contact WB2MGP at area code (718) 983-1416. That line is both voice and fax.

NOTE: The Effective Sunspot Number for 18 FEB 94 was 42.0.
The Full Kp Indices for 18 FEB 94 are: 2- 2o 2- 3- 2- 2o 1+ 3-
The 3-Hr Ap Indices for 18 FEB 94 are: 7 8 7 14 6 8 5 12
Greater than 2 MeV Electron Fluence for 19 FEB is: 1.0E+08

SYNOPSIS OF ACT

Solar activity was very low. Little eruptive activity of
any type occurred. One new Region, 7674 (S14E24) emerged to
join the three other spotted regions visible. Region 7671
(N12W00) remains the dominant spot group.

Solar activity forecast: solar activity is expected to be
low.

The geomagnetic field has been at unsettled to mildly
active levels the past 24 hours.

Geophysical activity forecast: the geomagnetic field is
expected to be mostly unsettled throughout the interval.

Event probabilities 20 feb-22 feb

Class M 05/05/05
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 20 feb-22 feb

A. Middle Latitudes
Active 25/25/25
Minor Storm 15/15/15
Major-Severe Storm 05/05/05

B. High Latitudes
Active 25/25/25
Minor Storm 15/15/25
Major-Severe Storm 05/05/05

HF propagation conditions were normal over all regions,
except the auroral latitudes where sporadic fading was observed.
No changes are expected over the next 72 hours.

EVENTS WIT

Date Begin Max End Xray Op Region Locn Sweeps/Optical Observations
------ ---- ---- ---- ---- -- ------ ------ ---
NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

Thank you for your helpful, warm remarks.

NOT!!

Look, let's not be a jerk. It should have been clear from my post,
which in its original form mentioned that I had a listing from this
month's CQ but that I really wanted something in electronic form,
that if I wanted something on paper, I already had it. The reason
I like things in computer readable form is because my office is
absolutely overflowing with paper! If I go away for a week, the
amount of new paper that arrives in the mail will more than fill
one of those boxes Hammermill uses for 10 reams of copy paper.
We're talking about a serious problem with too goddam much paper!

Now, your life maybe real simple, just like your view of the world
and maybe for you, a paper listing is adequate. If so, enjoy! No
one's twisting your arm to move into the modern world. For me, an
electronic listing that I can let my machines keep track of for me
would be a real help.

Clear enough?

Yours,
Doug Hamilton hamilton@bix.com Ph 508-358-5715
Hamilton Laboratories, 13 Old Farm Road, Wayland, MA 01778-3117

1874. WARNING: Potential Satellite Anomaly Warning - 21 Feb

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-21 06:56:44 UTC
From: oler@rho.uleth.ca
Message-ID: <9402210656.AA19946@rho.uleth.ca>
Source record: 270826
Cross-posted to: rec.radio.amateur.misc,rec.radio.shortwave,rec.radio.info

/\

POT

ISSUED: 06:00 UT, 21 FEBRUARY

/\

ATTENTION:

Protons at greater than 10 MeV are becoming fairly significantly enhanced at the present time. Flux levels are presently continuing to increase. New maximums are continually being set. Protons at greater than 10 MeV are presently at 570 pfu at 06:05 UTC. Some contamination of the x-ray sensors is presently being observed on-board the GOES-6 and GOES-7 spacecraft. Other anomalies may be also observed during this satellite proton event. This proton event is not particularly hard, spectrally. Most of the particles have energies below 50 MeV.

An interplanetary shock, related to the flare which was responsible for this proton activity, is expected to arrive late in the UTC day of 21 February or (preferably) early in the UTC day of 22 February. There is a fair possibility geosynchronous satellites may observe periods of magnetopause crossings for several hours after the arrival of this shock.

Also by way of update, the high energy electron fluxes (and fluences) at greater than 2 MeV which have been observed over the last two weeks have dropped and are continuing to gradually fall.

** End of Warning **

1875. rec.radio.info not a dumping ground (was Re: FCC Digest)

>>

>I have no opinion one way or the other, but maybe to satisfy both parties
>it could be posted on just rec.radio.info - that seems like a VERY
>appropriate forum.

However, rec.radio.info only takes the cream, and not the dregs. Not that the FCC Digests are necessarily dregs, but if rec.radio.info became almost predominantly a target for articles that were kicked off other newsgroups, it would quickly get tuned out as a dumping ground for noise. Arguments about whether or not the articles are appropriate should concern themselves with whether or not they belong on Usenet at all, not if a suitable junkpile can be found for it (a case of "Not in My Back Yard" perhaps?).

Currently, rec.radio.info serves as a concentrator, not a deflector. Any article posted to it is also simultaneously crossposted to another appropriate radio-related discussion newsgroup. The reasons for this are nicely summarized in the following excerpt from the newsgroup's charter postings:

-- Why are messages almost always cross posted to rec.radio.info?

It provides a "tag" for each article to be assembled into a filtered presentation in rec.radio.info (even with cross-posting, only one message, with a unique Message-ID, is propogated across the net). This tag also facilitates a pre-existing method of dropping or cancelling the articles locally within the discussion groups if you don't want to see them. This accommodates individuals who want to separate the bulletins from the discussions, discussions from the bulletins, as well as those who are adamant about not reading another newsgroup and wanted to see everything all in one basket.

With the total size of Usenet (in number of newsgroups and total traffic) doubling every year or so, this is no insignificant contribution to reducing information noise and chaos. Making the discussion groups a catch-all, and making extra newsgroups filters on that catch-all, is also the most realistic

way to implement such a scheme (It's not intuitively obvious what the charter, contents, and general appropriate topics for each and every newsgroup are. Seeing FAQ's and charter/intro postings in the home newsgroup is beneficial for new readers).

By cross-posting one only is adding a few tens of bytes to each bulletin (to specify the extra group on the Newsgroups line), but are adding the capability for very powerful filtering features available on most news servers, listservers and readers. Your local news guru could probably explain these features in more detail.

In short, in order to make everyone happy, rec.radio.info needs to avoid "stealing" any newsgroup's articles, which would implicitly change the contents of newsgroups (especially the non-amateur-radio ones) without their readers' consent. Modern news transport software and news readers makes cross-posting almost indistinguishable from single-newsgroup posting anyway. Making an existing newsgroup "take responsibility" for a given article by serving as a cross-posting target also ensures that rec.radio.info continues as a worthwhile information resource.

If I were to offer an opinion (something that always gets me in trouble :-), I would say that the FCC Digests are a bit too voluminous to continue to post in full. It might be a good idea to make up some sort of pointer posting to them if and when they become available from an FTP or Gopher site, possibly sponsored by fcc.gov.

The 3-Hr Ap Indices for 19 FEB 94 are: 15 14 30 22 15 14 21 13
Greater than 2 MeV Electron Fluence for 20 FEB is: 1.8E+08

SYNOPSIS OF ACT
--------------------

Solar activity was moderate. Region 7671 (N09W15)
produced an M4/3B flare early in the period. The event attained
maximum at 0141Z, and included Types II and IV sweep, as well
as a burst of 190 sfu at 2695 MHz. The large circular filament
located at the perimeter of the Region over the past few days,
disappeared during the activity, and the main spot has since
fragmented into at least two pieces. Since this impulsive
```

flare, the region has done little of significance.

STD CORRECTION: The SESC has mistakenly stated that this flare was impulsive. It was not. It was an impressive long-decay event with x-rays remaining above M-class levels for 87 minutes. Major Types II and IV sweeps accompanied the flare. The Type II had an estimated shock velocity of approximately 1,400 km/sec (+/- 200 km/sec). This flare occurred in the general vicinity of extremely intense Ca XV emissions that were observed from the area when it first rotated into view over a week ago. A correction to the proton flux observed from this flare is also given below.

Solar activity forecast: solar activity is expected to be low. Additional M-class activity is not expected from Region 7671.

The geomagnetic field has been at quiet to active levels. A satellite proton event at greater than 10 MeV began at 0300Z. This activity is attributable to the flare/CME event from Region 7671 at 0141Z. A sharp onset, typical of well-connected events, preceded a peak of 74 pfu at 0915Z. The fluxes have decayed slightly during the day, but still hover near the 50 pfu level. A small signature at greater than 100 MeV was also seen, roughly one order of magnitude above background. Equipment problems at Thule prohibit a precise assessment of a polar cap absorption, but other data suggest it may be on the order of 3-4 db. This is the first solar proton event since March, 1993.

STD UPDATE: Protons at greater than 10 MeV have since soared to levels almost a magnitude higher than those given in the SESC report. The current preliminary maximum flux at greater than 10 MeV is 350 pfu at 04:05 UTC on 21 February. PCA has also increased accordingly.

Geophysical activity forecast: the geomagnetic field is expected to be unsettled to active for the next 24 hours. Flare/CME effects are expected to dominate the last 48 hours when minor storm conditions should prevail. Episodes of major storming at all latitudes are distinctly possible. Proton fluxes are not expected to increase with the passage of a shock, expected early on Feb. 22. The slow decay is likely to persist throughout the forecast period.

Event probabilities 21 feb-23 feb

Class M 10/10/10
Class X 01/01/01
Proton 10/10/10
PCAF In Progress

Geomagnetic activity probabilities 21 feb-23 feb

A. Middle Latitudes
Active 25/20/20
Minor Storm 25/50/35
Major-Severe Storm 05/30/15

B. High Latitudes
Active 20/10/20
Minor Storm 30/50/35
Major-Severe Storm 15/40/25

HF propagation conditions continued near-normal for the low and middle latitudes. High and polar latitudes have observed a very strong level of signal degradation over the last 24 hours due to the strong proton-related polar cap absorption (PCA) which is in-progress at the present time. Practically all transpolar paths are experiencing useless propagation, while transauroral paths are experiencing very poor to useless propagation. High signal absorption is expected to continue over the next 24 to 36 hours. Early on 22 February, an interplanetary shock related to the M4.0/3B coronal mass ejection should arrive, producing additional geomagnetic and auroral-related signal degradation down to possibly even the lower latitude regions. The disturbance, after it arrives, should last approximately 24 to 36 hours with lingering residual degradation persisting over the higher latitudes for several days thereafter.

NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

RACESBUL.314 RELEASE DATE: February 21, 1994

Subject: MGT - Semantics 4/7 - Commun. Director & Radio Officer

DIRECTOR OF COMMUNICATIONS. Until the mid-Seventies this was a common title in government circles for the individual in charge of public safety communications systems, operation, direction, maintenance, procurement, planning and budgets. Then the title began to shift to an entirely different occupation -- that of public information and public affairs. Thus began the shift in semantics from COMMUNICATIONS to TELECOMMUNICATIONS.

RADIO OFFICER. There has probably been less confusion over this title than any other because it has been in the FCC Rules since the 1950's. The Radio Officer is responsible to the civil defense director for the RACES program. Some governments make a distinction between a Radio Officer and a RACES Radio Officer. A Radio Officer is also the RACES officer and is knowledgeable of all the public safety communications systems in his or her jurisdiction. The radio officer may indeed be employed to be in charge of those systems. A RACES Radio Officer, on the other hand, is responsible only for the RACES. We encourage the recruitment and assignment of a full spectrum radio officer whenever possible. To be effective, any radio officer must be interested in far more than the four walls, the floor and the ceiling of the Emergency Operations Center.

Series authored by Stanly E. Harter, originally titled "From My Lookout". Edited for digital transmission. (Continued. Series of 7) eom.

RACES Bulletins are archived on the Internet at ucsd.edu in hamradio/races and can be retrieved using FTP.

Jeff, I'm afraid you've gone 'round the bend here. This kind of
argument went out with McCarthy, didn't it? I think you're a bit
overzealous in desiring to {pro,per}secute "suspected illegals", too.
Now I guess I'm one of your suspects too, even though I am not now,
nor have I ever been, involved with pirate radio. :-)

BTW, if you're serious about wanting to work against the pirates,
wouldn't that mean that you should read alt.radio.pirate, as Dana
says, along with any other information you can get on them? Whatever
the source, "Know your enemy" sounds like sound advice.

: speed is still at about 10 to 11wpm.
: Would the VEC's kick me out if I brought a laptop to a code test session or
: should I wait until my paper speed catches up to my keyboard speed?
: Opinions requested.
: 73's Patrick Tatro N0WCG

First - good choice on Morse Academy. Joe Speroni AH0A/7J1AAA wrote it
in order to get his XYL to become a ham (she's now an EXTRA). The
s/w is grossly over engineered - but I use it for practice as well
at >40 wpm.

Second - when I headed up the VE Team in Tokyo, Japan we would permit
examinees to use keyboards specifically because we had passed out so
many public domain versions of Joe's Morse Academy - everyone was
fully accustomed to keyboards. The ONLY problem I have seen, and
I only saw it once - is that an examinee used the spell checker in his
word processing program to check his copy. He was NOT a native
speaker of English (he was actually European, not Japanese) and
as a habit he always used the spell checker. He was quite frank
about it - never realized it was a no-no. Well, he took the test
again and passed. But that caused me to notify the ARRL/VEC to
suggest to VEs that when examinees use keyboards - the VE should
make sure that the spell checker is not used - regardless of the
fact that it would be almost useless anyway.

Sorry but it's in my blood; I had too many years of having to put up with jammers and hecklers and interference on our U.S. Coast Guard frequencies; try to work a distress while some fishing boat crew off Mexico is singing into their mic... You see, I have a MUCH different set of experiences than any of you in this matter. And a very different viewpoint, too.

As federal officers we couldn't do much other than complain to the DOT and FCC; but now as a civilian I can and will take a more active role in trying to silence these federal lawbreakers (hey - maybe I should become an O.O.)

Let me add this: Neither I, nor any of my fellow Coast Guardsmen, EVER experienced willful interference on ANY CW frequency; when it happened it occured on the voice frequencies. (Ha! a plug for CW.)

Recall the Australian ham who complained a few months back (on .policy) about 30 and 40 meters being terrorized by illegals - he fears that the Aussies will lose both bands to these people.

Steve - the point is to get Dana off my back. I'm sorry to keep mentioning the 6mhz air-to-ground freq incident that occured on .cb but I felt that posting those freqs was wrong - dead wrong - and I voiced my opinion as such. Dana took the liberty to try to discredit me on .cb (calling me a `hamster cop') and his post made him sound as if he was defending the person (who gave out the air-to-ground channels as a gathering place for pirates); but over here he makes it sound like I'm picking on him. He did the same thing when I inquired about why someone was selling a linear amp on .cb (again calling me a hamster cop).

I'll happily call for a truce if he'll quit pestering me.
[And I don't really believe that Dana was himself ever a pirate; I

just question his motives for what appears (to me) his coming to
their defense.]

Alright, I'm QRT on this issue. dit dit

1882. personal communication Australia <-> USA

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-21 10:44:20 UTC
From: simonm@koel.mel.dit.CSIRO.AU
Message-ID: <1994Feb21.104420.14516@mel.dit.csiro.au>
Source record: 270734
Cross-posted to: aus.radio,rec.radio.amateur.misc

Hi,
I'm trying to find ways to communicate with my fiancee who
lives in the USA. As I was wandering around the Internet trying to
figure out how to get my computer-illiterate sweetheart onto the
Internet with real-time chatting with IRC or even "talk", I thought of
the idea of radio.

I guess I am a radio illiterate. I try and look for the FAQs,
but it's really scary doing a directory listing and thousands of files
scroll by at 9600 baud.

Is it possible at all for my fiancee and I to purchase some
radio equipment and talk to each other? The long distance telephone
bills are a killer, so I think a couple of thousand dollars worth of
radio equipment would be a good investment.

Is the implementation of my idea legal? Would we need or want
a scrambling device? Or is there some sort of "radio etiquette" out
there that requires me to talk to other radio hams and join radio
clubs and stuff... all I want to do is talk business and pleasure with
my future wife (ain't love grand)

An idea of where to start and whatto do would be helpful,
because I honestly have no clue.

If possible, please email your responses.

cheers,
--

: [...]
: >increased power output?
: Well it's usually not quite that simple. Sure it's possible to modify an
: existing PA to output more power. But the key things are impedance matching
: and drive levels when changing out the PA transistor for a higher power one.

Usually, the formula is : Rout = (Vcc - Vsat)^2 / Pout. It doesn't take
into account the Cout of the transistor, of course. Once you have calculated
the Rout for the current Vcc and Pout, you have to design the matching filter
to bring (up) the Rout to 50 ohms. Vsat is the saturation voltage of the
transistor.

: In fixed equipment, it's often possible to go to a higher supply voltage,
: say double that of the original stage, and if the transistor beta and drive
: level are sufficient to also double current output, then your load impedance
: can remain the same, and the output matching network doesn't have to be
: modified while your power has increased fourfold. Note however, that input
: impedance to the active device will also often be different after you change
: devices, and that has to be matched as well.

Overall, don't forget that many transistor are design to operate at 13.8 V
and not higher, so if you attempt to increase the voltage, it burns out even
if you have no ROS.

: >Another thing about transistor selection, will a VHF transistor work well in a HF
circuit?
: Device gain usually doubles for every octave reduction in operating
: frequency. VHF transistors can have so much gain at HF that stage
: stability can be hard to achieve. Other than that, for Class C operation,
: use of VHF rated transistors in HF circuits is doable. You do have to

Yes, many VHF devices are unstable at HF frequencies, because the gain is
increased while the transcapacitance increases also. The best solution is to
design a neutrodyne stage, or to carefully design the stage, thereby limiting
the oscillation. Be careful also not to be faced with parasitic VHF/UHF, as
sometimes while the transistor is stable at HF, it is unstable at VHF. So
compute the Stern factor at each frequency, and be careful also of the shift
of the matching network, which can sometimes reflect VHF with the proper phase
to make it oscillate. The best way to handle this is to insert low-pass filters
after the stage.

1887. Hamblaster Update

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-21 13:54:01 UTC
From: jwa@tellabs.com
Message-ID: <1994Feb21.135401.17403@tellab5.tellabs.com>
Source record: 270739

2-15-94

I hope that this will clear up a few questions about
the Hamblaster.

Disclaimer

This IS NOT an ad. The Hamblaster is not a product
that's being sold to amateurs or any other group.
It's a 3 year effort by myself and Will Torgrim N9PEA.
We have been doing this as a hobby, hopefully, to
improve Amateur radio. Unless we are ready to sell
the Hamblaster as a product or if we can get someone
to back us, I will continue to post our progress.

Finnally, we have spent thousands of dollars to develope
the Hamblaster and we haven't earned a single penny
for our efforts. So how can this be an ad?

The Hamblaster is not a software package. It requires a
special sound card that uses a Texas Instruments TMS320C25
DSP to run filters or audio demodulators. It can interface
to a TNC via a TTL digital port and replace the TNC's poor
filtering.

It's not compatible with other sound cards but it can
co-exist with them. I use my Soundblaster Pro and Hamblaster
together. I can, for example, run a filter on the the Hamblaster,
connect it's output the Soundblaster and record a CW signal using
the SB software under the Windows environment.

More "info"

1) External Power supply

I think one feature that separates the Hamblaster
from other sound boards is it's ability to run on
an external 12 volt supply. When a filter or modem
is loaded, you can turn off the computer and it
will stay active.

When it's connected to a PK-232, there's no need
to leave the computer on in order to keep the DSP
alive. Right now, my PK232/Hamblaster is runing
and it's been operating for about two weeks.

There still some developement work being done and
I'm told that the power supply will be on a small

PC board and sold as an option for about $20.00.

2) Adaptive (LMS) filter

There's ongoing developement in this area. We are
planing (I don't think this has been done before)
to add controls to the LMS algorithm.

Eureka! It works! 2-21-94

I just received a call from Will last night but I
wasn't home. My answer machine got it. He held
the phone next to the speaker and I heard SSB with
a carrier and some other interferance. He pressed
a button on his computer and the hetrodyne was gone.

I don't have any details about the software except
that it works. I'll keep you posted.

As is the case with automobile antenna installations, the best advice
is to *get out the drill*, however, you can use a block of wood as
a feedthru in a window if your lease won't let you drill the wall.
Drill the wood, put it in the window, and close the window against it.
If you don't mind replacing the glass when you move, you can also just
drill the glass for your antenna feedthrus. (Note there are tricks
to successfully drilling glass. If you don't know them, consult someone
who does.)

>be able to access many different repeaters. So, what do you say?

If you travel in your own, or your company's, car, you'll be much happier,
as will all those who have to listen to your signals, if you install a
mobile rig and proper antenna rather than trying to make do with a HT.
If you use rentals, you may be stuck with a HT, or a "bagphone" equivalent
consisting of a small mobile rig such as the Icom IC229A, gell cell,
cigarette plug adaptor, and a magmount antenna. You won't have satisfactory
results with just the rubber dummy load that comes on HTs except in rare
locations, and their low power, susceptability to intermod when used with
an outside antenna, and low audio output will make you miserable in the car.

With the proliferation of 440 MHz activity in much of the country, you
may also want to consider a dualband radio. I consider Alinco the value
leader for function per dollar, but Yaesu and Icom also make good radios.
I don't particularly like Kenwood VHF radios due to a history of problems,
but others seem to think they're acceptable. If you're set on a 2 meter
only HT, then the Radio Shack HTX202 is an excellent value with good
intermod rejection. Most of the others on the market today try to pretend
that they're GP scanners as well as two way radios, and thus suffer the
problems inherent in wide receiver front ends.

My choice in my vehicle is the Alinco 590, and my HT is the Yaesu FT470.
Both perform acceptably for the uses to which I put them. I wouldn't
consider using the HT in the car, however, since it's wide front end
causes it to suffer extreme intermod when used on an external antenna.

I don't recognize RG-225 by number - are you SURE that it is 50 ohms?

> At the duplexers, looking up through the first rg-225
> jumper/hardline/jumper/antenna I see about 22 watts out with about 5

Don't condemn the wattmeter yet - it has a different length
pickup element and is probably telling the truth.

> 2.8db/200 ft)...about right for the length...

Critical measurement missing... what was the apparent VSWR
when you had the 50 ohm pure resistive termination on the end
of the line? It should have been 1.0 if the cable and wattmeter
are both good, and I'll bet both wattmeters would show 1.0.

> It seems to me that the
> feedline impedance is more like either 38ish or 75ish ohms with that

> rest of the system is a bit nutty. With the reflected power at
> the duplexers, I'm having a little desense.

If you measured the antenna VSWR with both meters DIRECTLY at
the base of the antenna, what did each of them show? You should
have gotten 1.0 with both meters, telling you that the top
jumper cable was bad.

> Any ideas on the problem?? It really has me stumped...Oh yeah, if I
> vary the length of the jumper at the top between the hardline and

> place!! Please help if you have any input. 73 de WB4IUY
> ___
> X OLX 2.2 X "What ?!? This isn't the file section ?!?"

Your last statement tells all. If the SWR varies that much
with cable length, you definitely DO have a high VSWR in the
antenna. I suspect you took a lightning hit and smoked the
antenna. The lightning probably melted out the solder joints
between the coaxial sections that make up the antenna, so it
still radiates, but with the main lobe nowhere near the horizon.

SB PROP @ ARL $ARLP007
ARLP007 Propagation de KT7H ZCZC
AP21 QST de W1AW Propagation Forecast Bulletin 7 ARLP007
radio amateurs

Unstable geomagnetic conditions finally started settling down this week. A very disruptive coronal hole in the Sun's Southern hemisphere was the cause of all the grief. Conditions may worsen again on the day this bulletin is released, and again around March 6 when the recent disruptive region rotates back into view on the solar disk.

Look for flux values to drop after this weekend, reaching a minimum around 85 on March 2 or 3.

For the DX contest this weekend, look for a flux between 100 and 105, and A and K indices dropping after Friday.

Sunspot Numbers from February 10 through 16 were 49, 49, 53, 72, 59, 59 and 71, with a mean of 58.9. 10.7 cm flux was 94.2, 93.1, 97.6, 97.8, 101, 103.8 and 104.7, with a mean of 98.9.

The path projection for this weekend is from Orem, Utah to Bolivia.

80 meters should be open from 0100z to 1030z, with the best signals around 0300z. 40 meters should be open from 0030z to 1130z, with the best conditions from 0100z to 1000z. 30 meters should be good from 2330z to 1200z, with the best signals from 0130z to 1000z. 20 meters should be good after 2200z until 0230z on most days, until 0530z on some days, and on a few days until 0800z. The peak period for 20 meters should be from 0000z to 0230z. 17 meters should be open from 1430z to 0200z, with the best time around 2230z to 0130z. 15 meters should be open from 1530z to 0030z, with the best signals late in that period. 12 meters looks good from 1600z to 2300z. The best signals on 10 meters should be around 1800z, with a possibility of openings from 1700z to 2200z on most days. On some days 10 meters could open as early as 1500z and close as late as 0130z.

>
> 73, K7ITM

This one comes under the "Brain-Teaser of the Month" category.
However, the solution is not that difficult. The 50 ohm cable
will always exhibit 1.0 VSWR at the radio end, since it has
the same impedance as the antenna.

The 75 ohm line will have more than double the I^2*R losses
(VSWR^2 = 2.25) because the peak current is 1.5 times that of 50
ohm cable.

AND NOW REALITY ENTERS THE PICTURE:
To make things even worse for the 75 ohm mismatched cable, the
difficulty of adjusting the line length as the copper expands
and contracts with ambient temperature is aggravated by the black
plastic jacket that raises the temperature during summer sunlight
but does not help during winter nights. Therefore the transmitter
sees a load phase angle that varies with outdoor ambient
temperature as the 75 ohm physical line changes electrical length.

As a system admin, I think you'll be doing the folks at Buffalo a major
favor by using the alias they've set up. It is there for two reasons:

1) So that it'll be easy to remember. Callsign is pretty discriptive.

2) So that they can change the underlying real machine if they need to.
You won't see the switch if you use the published alias. If you
insist on using the real name, you'll be out of luck. You'll also
either have to waste bandwidth here or to the guys at buffalo to
see if it still works or whatever. Please use the alias!!!!

1900. Ramsey debate

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-21 17:34:18 UTC
From: JMG@tntech.edu
Message-ID: <01H9588FB5AWEGO7NI@tntech.edu>
Source record: 270752

Haven't felt it was appropriate to get back in the
middle of the debate, but I was very offended at the comments made
directly at me. People on the network and across the country know me..
I have never had anyone call me a liar, and to my knowledge haven't
had any problems with anyone I have personally dealt with
(giving and receiving information, and buying and selling equipments).
I have people calling many nights during the week to ask for help and
ask general questions.. haven't had a problem with any of them.

I am always most willing to "look in the mirror". Been happy with what I
see. What I related on the net was a documented experience I had with
John Ramsey, no more, no less. It was based on facts not fiction and had
nothing to do with his personal being outside the realm of my experience
with him. When I called him a "liar" I think I specifically related the
lie he told me.. this seemed reasonable. I was also very offended that
he was saying things to customers on the phone that were negative about
me (also documented). In contrast, I don't know of an instance where I
have lied to ANYONE... it is not something I think is a good attribute
and never do it knowingly. I think I was not negative about the building
of the Ramsey kit and remember specifically saying I thought the
building of it was in fact fun up till the final alignment (so please be
accurate when you attempt to call someone a liar with absolutely no
information).

I know I am not in the least guilty of any immoral or unprofessional
behavior...and think it may be time to let this drop.. I was just trying
to relate an experience to help people avoid problems I personally
encountered. I have heard MANY other people relate problems with this
company or I would have not said anything to start with.

73.. this is suppose to be a supportive, fun hobby .. isn't it.

Jeff, AC4HF (and proud of it)

For Christs sake Jeff. Give it a fucking rest.

I voted for Bush both times, how about accusing me of murder since I had
a hand in electing the Commander in Chief that ordered Desert Storm?

By the way, lists of frequencies used by various agencies are published
in books and magazines in most electronics type stores. How about telling
me that Radio Shack promotes jamming the police. Heh?

Tom Kneitel (spelling?) pushes his frequency compendium by splattering
the word SECRET in 3" high caps across the cover. How about it? Is he
promoting jamming various services? Perhaps instead he could be accused
of aiding and abetting drug dealers by publishing the DEA comm channels.

Since you seem to have to have the last word, and constantly stir up shit
over non-issues how about we create a new newsgroup for you.

rec.radio.pendantic

Simple and efficient. You can cover amateur, CB and commercial without
cross-posting. You might even get a few of the others with a flair to
the verbose to join you over there.

Bottomline disclaimer for the humor impaired. Yup, I used the F-word.
If you're too lazy to scan the news before forwarding it onto the RF
via packet, it's your problem, not mine. Re-read your copy of part 97.

Side Note: How many remember Uncle Toms Cabin in Popular Electronics?

>
> We need to gear up to fight this. Without a 2400 MHz allocation, repeaters
> in this band won't work.

This is an NTIA study (see other postings). The comment period runs through May. I don't know when the FCC gets involved, but I would assume they have to be involved at some point.

We should indeed mobilize to prevent industry use on this band. A key part of this would be to present the history of sharing with industry on 900 MHz, which has resulted in a near exclusion of Amateur traffic from the band.

I would think that the performance of ARRL is going to be critical on this one (please everybody hold the pessimism postings - I know, but they are all we have). Would anyone from ARRL like to post on this?

Thanks

Bruce Perens

1903. DJ-580 modifications

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-21 18:13:23 UTC
From: gereiswi@nmsu.edu
Message-ID: <2katk3INN69@dns1.NMSU.Edu>
Source record: 270755

I just purchased an Alinco DJ-580 which has already been modified
to recieve aircraft down to ca. 120 MHz on VHF and 810-900MHz on UHF. Are
there any other interesting mods that I might be able to do?
Also, there is a plug for "stereo out" (VHF left channel, UHF
right). When I plug this in, using a standard stereo jack, there is an
occasional squeeling noise. The mono jack does not do that. Suggestions?
Thanks in advance,
George

POT

UPDATED: 15:00 UT, 21 FEBRUARY

/\

ATTENTION:

Protons at greater than 10 MeV peaked at 10,000 pfu shortly after the
arrival of a large interplanetary shock front at 09:00 UTC which measured 93
nT at ground-levels. Protons have since fallen and are expected to fall
below event levels of 10 pfu by the end of the UTC day.

Geosynchronous satellites are experiencing magnetopause crossings and
can expect to see additional magnetopause crossings throughout the remainder
of this UTC day. This disturbance is fairly energetic.

Sheesh Karl,
As a "computer guy" trying to get reacquainted with radio after 25 years
in the digital (read virtual) world. I'm feeling a bit queasy back here
in analog world, having to be concerned with the temperature and color
of the plastic jacket. Ya know, a compendium of this stuff would be
just great for explaining those random problems computers experience
that we can't explain:
The color of the cable is wrong
The phase of the moon is not right
Gamma rays
etc.
I never cease to be amazed at the little things.
Thanks for your post

>The ARRL is making empty threats. The data in the repeapter directory is
>no more propiratary than the information in the phone book. In fact Wayne
>Green was putting out a directory before the ARRL and they stole it from
>him according to Wayne.

Well, the ARRL might very well be making empty threats but the fact
remains that THEY can pay more for lawyers than I can; the ARRL is not
threatening the body of amateurs in general but ME specifically. Even
if they are entirely wrong, I am instantly bankrupt when they file a
suit and I have to hire a lawyer to defend me. Since they have the
bigger stick, they can do absolutely anything they want. Thus, I am
forced to put the online repeater database project on hold until such
time as this matter is clarified. Innovation through litigation.

I have asked the folks over at ARRL HQ for a clarification about their
letter. In particular, I ask whether they believe that they have
proprietary control over the FACTS of the database. More ominously,
they also claim that my format in some way infringes upon their
copyright. While this might require only a small adjustment in the
data format, their letter is not clear to me; they may be claiming
ownership to the entire idea of organizing repeater information by
state, location, frequency, etc.

Until such time as the ARRL replies to my queries, or I can figure out
some way around their legal threats, the project is on hold.
Effectively, I must obtain ARRL permission before I can continue and
it probably is not in their best interest to have someone come up with
a usable alternative to their directory.

>Fortunatly there is an answere in the American
>Civil Liberties Union. Give them a ring or if you don't want too I will
>and get their oppinion. The ACLU scares the shit of anybody they bring
>their guns to bare on.

While this is indeed one possibility, the problem is that I must
continue and risk legal exposure. I must rely on the ACLU to be
willing to defend me and I must hope that the legal system indeed will
end up ruling my way. Until a court rules, the ACLU opinion is just
that- an opinion. While I am definitely incensed at the ARRL for
their actions (and I am a member also), I am not sure I care about
this project enough to risk everything.

To be honest though, I am curious what the ACLU thinks of the matter.
Prior to starting on this project, I did ask for an opinion on the
matter and was told that the ARRL holds a copyright on the format but
not on the data itself since FACTS can not be copyrighted.

The ARRL is making empty threats. The data in the repeapter directory is no more propiratary than the information in the phone book. In fact Wayne Green was putting out a directory before the ARRL and they stole it from him according to Wayne. It's a shame that the ARRL (I am a member) can think just because they have fuzzy balls they can threaten person with no means of hiring council. Fortunatly there is an answere in the American Civil Liberties Union. Give them a ring or if you don't want too I will and get their oppinion. The ACLU scares the shit of anybody they bring their guns to bare on.

> How many Internation Reply Coupons are need for return postage of a
> QSL card ... does the number of IRCs differ from country to country?
> or is one IRC all that is necessary to send?

One IRC is first class (surface) postage from any IPU country to the US.
Note that not all countries belong to the IPU (International Postal Union).

For most countries you really want air mail, and that is where things get
difficult. The Air Mail rate ranges from 2 to 10 IRCs depoending on the
country (of course the ones where surface mail is awfull want 10 IRCs :-)

This changes from time to time, so you need to check the K6JO (?) QSL
managewr list or a recent callbook for the latest info.

BTW *never* buy IRCs fromthe post office, send a check for $10 to a QSL
manager and ask to buy some IRCs - he gets more than the post office will
give him and they cost you less! When I last did that they were around 30
cents apiece that way.

Good DX! Mike AA4MW

There is only one thing to worry about. While the information in the
ARRL directory is public domain, the info in the online database
directory was collected by the ARRL. I would worry that using this
information without permission would be like copying a road map
without paying the map's publisher.

This is not to say that we can't "reverse-engineer" ARRL's directory.
We could get the information from the regional repeater coordinators.

[...]
> The ACLU scares the sh*t of anybody they bring their guns to bare on.
[...]

The threat of a hundred naked ACLU lawyers waving the flip side of
their hinnies at you is enough to scare anyone. =%^O
But I think that having ACLU lawyers bringing their expertise "to
bear" on the problem would be effective too.

The ACLU might be interested. It is a case of a private organization
attempting to privatize and limit access to information that is in
the public domain.

>considering the RS HTX-202 and HTX404, but I don't know the difference
>between the two "bands", which is more active, which is better.

You will get more use out of the HTX-202 2m radio (144-148MHz). In most cities, 2 meters is considerably more active than 70cm (440MHz, what the HTX-404 covers). Here in the Richmond area, there are about 12 2m repeaters, compared to 3 or 4 70cm machines. However, if you live in a larger city, you'll find that the two bands are fairly even. That seems to be the case up in Ohio.

>2) I often hear about amateur repeaters. I know what a repeater is, and
how
>it works, but is my understanding that there are repeaters installed for
>use by amateur radio operators correct. Who installed them, who can use
>them, and what does it cost.

Any amateur operator with a Technician Class license or higher can set up a repeater. All you need is a tower site, a coordinated repeater pair (Where this pair comes from depends on what part of the country you're in), and a lot of equipment. Most importantly, it takes lots of money, which is why the majority of repeaters are supported by clubs.

>3) Finally, my wife works near Dayton, Ohio during the week, and we live
>near Toledo. If we both had HT-202 or HT-404 's, could we communicate
>with each other. Not without repeaters, I'm sure, so I guess this question
>involves the repeater questions.

A good repeater would be the key to talking between Dayton and Toledo. Just one repeater wouldn't do the trick, but there is an extensive netowrk of repeaters throughout the state where you could talk between the two cities.

Hope this helps!

>- Can repeaters in fact be used to place local telephone calls? If so,
> is there a charge for this service? Is it limited?

Yes. Some repeaters have autopatch capability. Most of those are club-sponsored repeaters which require you to support the club for autopatch access. Of course, business calls are prohibited, and you must keep in mind that everyone is listening to your call! The club I'm with here in Richmond limits your call to 3 minutes, and aside from club dues, local calls are no extra charge. For those of us who are a long-distance call between the repeater and our homes, they cover $1.00 of the long-distance charges. Check with some of your local radio clubs to find out what their policies are.

>- What are the legal restrictions on amateur radio traffic? Are data
> connections allowed?

Data conections are allowed. It's called packet radio. Some packet links are even connected to the Internet. Listen around 145.000 to 145.100MHz. You may hear an occasional packet burst down there.

>- What baud rate could I reliably connect at through a radio link?
>

On the 2m band, most links are 1200 baud, which is sufficient for local communication. Many sites that forward large amounts of traffic are experimenting with 9600 baud connections.

Hope this helps!

I'm GLAD that I don't have to invest in a $30.00 callbook (well, $60.00, for both North America and DX). They're out of date before they're ever in your hands! It's much cheaper for me to telnet to a more updated site than throw away an obsolete $30.00 book. The telnet sites are also more detailed!

I have uploaded to the SimTel Software Repository (available by anonymous
ftp from the primary mirror site OAK.Oakland.Edu and its mirrors):

pub/msdos/hamradio/
selcal13.zip Hams: Maritime SITOR selcall translator v1.3

SELCALL is a translation program to translate selective calling signals
of the maritime mobile service (MMS) CCIR 476-3 SITOR radio teletype
service between their numeric values and printable 4-letter-represen-
tations. The ZIP-file contains an EXE, a TPU and a DOC file.

Changes: Program now knows about coast stations, enhanced documentation.

Uploaded by the author. selcal13.zip has replaced selcal12.zip.

1920. Honda ignition recall - now NOISE!!

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-22 02:43:44 UTC
From: baxter@kuhub.cc.ukans.edu
Message-ID: <1994Feb21.204344.59186@kuhub.cc.ukans.edu>
Source record: 270771

This past month, Honda sent out a recall notice for their 90-91 Accords. They were wanting to replace a part in the distributor which failed when the car got high mileage.

I had this recall work done on my car a couple of weeks ago, and now have terrible ignition noise on 2 meters and 440. Before this work had been done, the ignition had been really quite quiet -- now it is nearly unbearable.

One fellow ham said the thought that he'd read something about this on packet or in one of the ham magazines.

Has anyone else had this problem? The local Honda folks seem lukewarm about fixing this problem they created, probably because theyt really don't understand it.

Any one dealt with Honda about this problem?

Thanks.

Kirk Baxter, N0FPZ/VK1KU

>and whether my old callsign Y32JK is still included.

Thomas -- The Y32JK call is not listed (at least so far as I can find). In fact, none of the old GDR calls seem to be listed in this year's edition.

The address for the DL5ATP call is listed as Thomas Planke, Postfach 113, D-98693 Ilmenau. Hope this is one is correct!

I have now placed some satellite tracking programs on World:

- stsplus.zip

- stsorbit.zip

- traksat {trak300a.zip & trak300b.zip} (latest version of traksat)

They are available via anonymous FTP via

ftp ftp.std.com:/pub/hamradio/pc/satellite

If you have any problems, questions, or comments, please e-mail them to me.

I tried very hard to search for stsplus through many archie searches, and
only found one site which carried it. I hope that by making it available
on World it will be easier to obtain.

My parents have a 1990 Accord which failed to start one day. It was traced to a bad ignition module. About a year after my dad had it replaced (out of his own pocket) Honda sent out a notice referring to this problem and reimbursed my father.

I'm not sure if a new style of ignition module was used. Perhaps that is the problem. Could you ask the dealership what EXACTLY was "fixed". If a new part was used what part did it replace?

If it is something other than the ignition module I would be really interested in knowing as I have a high milage (140k) 1985 Chevy Caprice which has *terrible* ignition noise. I have checked all of the usual items: Plugs, cables but to no avail. I think there might be a problem in the distributor. (I'm sure that SOMEWHERE, in some police garage there is a mechanic who has solved my EXACT problem - too bad there isn't a rec.radio.police.caprice.RFI newsgroup)

Well in my experience, the FCC had their Instructograph's volume turned
up so loud a hundred manual typewriters couldn't have drowned it out.
It un-nerved me to hear it echoing down the hall. They'd also let you
use cans if you brought your own, and your own key for the sending test
too. (Wish I'd known that in advance, their key sucked.)

As for cheating by watching someone's fingering of their keyboard,
I'd never thought of that. Seems to me that would take as much
practice as just conditioning yourself to copy the Code.

Creative Technology DSP folks have given me an unbelievable reply. The Sound Blaster 16 with ASP has been on the market for some time now and people are still scrambling for information. It seems it will not soon be forthcoming. They have said to me that they are going to keep their Advanced Signal Processor chip, its programming model, etc. a secret. The shortsightedness of companies in this area is never ending. The secrets inevitably come out and the people who could make their product for them are to put off by this attitude. An open system always sells better than a closed one and inevitably leads to applications the developers never dreamed of. I had several in mind which they will now have done on a competitors card. If you can believe it, they had the gall to ask detailed technical questions about modems without answering a single technical questions other than to tell me the development system cost $5200. FORGET IT. I will develop using the Cardinal or Hamblaster depending on which turns out to be more open about its architecture and/or the most versatile for our applications.

Back in the "good-ole-days", we made whistles from short (approx 4")
lengths of brass tubing. Sometimes the tubing could be salvaged from
a VHF or UHF antenna; sometimes acquired from a hobby shop. ID, as I
recall, was 0.25".

A notch cut in the side, approx 1.5" from one end, and final "trimming"
of the tube, acquired the desired tone. (In the order of 1800Hz, I think)

Worked pretty well ... considering the investment ... but did take some
practice to become competent.

Have fun!

> rohvm1.mah48d@rohmhaas.com

I, too, have to disagree with the observation regarding Heathkits. From back in the 50's (that's 1950s folks) when I built my first one, I'd never had a problem that wasn't of my own making.

My experience leads me to belive Heathkit (may they RIP) has been unfairly slammed ... by far, I believe, the Heathkit builders were successful and had an excellent learning experience.

The kits were developed, and manuals written, not for graduate engineers but for the folks in the front lines. The number of Heath products in use through the years, as well as today, certainly attest to the quality of their product.

I've never done a RAMSEY kit, so no comment here.

I did not build one, but I debugged and fixed one for a friend who
could not get it to work. And for good reasons.

The receiver is a knock-off of the Neophyte Receiver from QST. The
air variable in the VFO is replaced by a reverse biased 1N4002. It
is unstable and drifts like crazy.

The transmitter is a knock-off of W7ZOI's universal qrp tx with `Ramsey
special' mods. The L-C tuned interstage coupling, which required toroids,
has been replaced by broadband r-c coupling. The problem: parasitics
galore. It took a lot of work to get it tamed and put out a reasonable
amount of power.

My one thought as I debugged and fixed these kits was: The mods were
to reduce component cost, never mind the effect on performance.

Sort of sums up my opinion of Ramsey kits.

1938. Dumming down of A.Radio

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-22 15:49:15 UTC
From: gdavis@griffin.uvm.edu
Message-ID: <gdavis.761932155@griffin>
Source record: 270589

Well, its sad, but then I suppose all of society in dumbing down,
why should we expect amateur radio to be different?

If you doubt what I'm saying, read a few packet bulletins and then tell
me if the writer was even literate.
I'm not talking about typos... we all make these... without an editor or
the time to proof.

I'm talking about horrible spelling and grammatical errors in basic syntax
and sentence constructions.
If the writer cannot compose a coherent sentence, then why should we
believe they are enough of an in focus thinkers to bother reading?

I had one idiot on packet jump all over me for typos of a minor
punctuation ommission. Then go one in this one 200 byte diatribe to
spell grammar (grammer) and lose as (loose).
You would have though that this idiot,who was so intent on drawing
attention to construction, grammar, and punctuation errors would have
gone to the trouble to check his own!

I only think it is sad that a whole area of amateur radio is inhibited by fear of the "seven deadly words" which one must never say aloud lest the wrath of the FCC gods descend!

Sigh - that is silly and pedantic in its own right. IMHO

> N3RKD

Often when I talked to people they were able to guess I was using
an HTX202 based on the audio levels. I took mine to the local
repair center, and the tech said mine was about as low as he had
seen it. I think it is more like a quick adjustment rather than
a mod.

I believe it works better now, because I have asked folks and they
say that the audio is sufficient.

By the way, record all of your memory settings. When you get your
radio back, its memory will be clear.

The 3-Hr Ap Indices for 20 FEB 94 are: 30 19 15 13 12 10 10 6
Greater than 2 MeV Electron Fluence for 21 FEB is: 1.1E+09

SYNOPSIS OF ACT

Solar activity was very low. Region 7671 (N10W28)
continues to be somnolent since its M4/3B flare of 20 Feb.
Weather has hampered patrol the past 24 hours, but the few

reports received indicate continued decay in that region. A new as yet unnumbered region may be coming into view in the northeast.

Solar activity forecast: solar activity is expected to be low.

The geomagnetic field began the period at quiet to unsettled conditions. The passage of a shock, thought generated by a CME associated with the M4/3B flare yesterday, brought major storming immediately after the sudden commencement measuring 92 nanotesla at boulder at 0900Z. Fluxes of greater than 10 MeV protons increased dramatically with the passage of this unusually fast shock, reaching 10,000 pfu also at 0900Z. Those fluxes have steadily declined since, and are now near 10 pfu. The transit time for this shock was a short 31 hours. During the time period 1200-1800Z, the polar cap absorption event registered levels in the neighborhood of 15 dB. A Forbush decrease of approximately 5 percent began midway through the day.

Geophysical activity forecast: the geomagnetic field is expected to persist at major to severe storm levels for the next 24 hours. The disturbance should gradually abate over time, giving way to unsettled to active conditions by February 24. The greater than 10 MeV protons are likely to return to background values over the next 24-36 hours.

Event probabilities 22 feb-24 feb

Class M 05/05/05
Class X 01/01/01
Proton 05/05/05
PCAF In Progress

Geomagnetic activity probabilities 22 feb-24 feb

A. Middle Latitudes
Active 05/15/25
Minor Storm 45/30/20
Major-Severe Storm 50/30/05

B. High Latitudes
Active 05/10/25
Minor Storm 30/25/25
Major-Severe Storm 65/45/10

HF propagation conditions were essentially useless over the high and polar latitudes, as well as most upper-middle latitude regions. PCA and severe geomagnetic and auroral storming resulted in intense absorption, very strong and widespread spread-F and auroral sporadic-E over the upper middle to polar latitude paths. Lower latitude paths saw fair

to good propagation. Conditions appear to be stabilizing and
should begin improving during this UTC day (22 February).
However, a return to near-normal conditions may not be observed
for the higher latitude paths for several days yet. Middle and
low latitude paths should see near-normal conditions return by
about 23 February if storming ends right away, or 24 February
if relatively strong residual activity continues. A coronal
hole disturbance may keep levels of geomagnetic activity
elevated somewhat, preventing higher latitudes from returning
to near-normal until later this week.

URGENT IMPORTANT AIDS NEWS FLASH!!

IVE JUST LEARNED THAT WAYNE GREEN THE PUBLISHER OF 73 AMATEUR RADIO TODAY
HAS PRINTED UP SOME PAMPHLETS WITH FULL CONSTRUCTION PLANS AND DETAILS
EXPLAINING PROPER USE OF THE 2 SIMPLE ELECTRONIC CIRCUITS DEVELOPED BY
HIS FRIEND PHYSICIST ROBERT BECK WHICH HAVE SHOWN PROMISE IN DISABLING
AND POSSIBLY CURING THE HIV VIRUS. YOU SHOULD HAVE RECEIVED AN EARLIER
BULLETIN FROM ME EXPLAING HOW WAYNE GREEN FIRST
WROTE ABOUT THIS EXCITING TREATMENT IN HIS MONTHLY EDITORIAL OF 73,
IN THE FEB 94 ISSUE AND THAT HE PROMISED HE WOULD PRINT THE CONSTRUCTION
PLANS IF HE GOT 1000 REQUESTS FOR IT. WELL HE HAS DECIDED FOR HUMANITIES
SAKE TO DO SO NOW IN PAMPHLET FORM AND IS MAILING COPIES TO THOSE WHO
WRITE/FAX/CALL HIS OFFICE AND ASK FOR IT. ALSO HE IS SENDING OUT FREE
TO THOSE WHO HAVE ALLREADY WRITTEN REQUESTING HE PUBLISH IT. HE IS DOING
THIS FREE AND IF YOUVE ALLREADY WRITTEN TELLING HIM TO PRINT IT IN THE
MAGAZINE, YOU SHOULD WRITE/FAX/CALL AGAIN ASAP TO ENSURE YOUR NOT OVER
LOOKED AND GET YOUR COPY IT MIGHT NOT BE PRINTED IN THE MAGAZINE DUE TO
LACK OF INTEREST SO TELL YOUR FRIENDS AND AIDS PATIENTS AND THIER SUPPORT
GROUPS EXC. AND OPEN MINDED DOCTORS AND NURSES SO THEY CAN GET STARTED
AND MAYBE SAVE LIFES OR AT LEAST AID IN THIS RESEARCH. AS PER WHAT HE
WROTE ABOUT IN THE EDITIRIAL, THE 2 CIRCUITS SHOULD ONLY COST ABOUT
$100 IN PARTS FROM ANY RADIO PASTS STORE AND EASILY BUILT BY ANY HAM/
ELECTRONIC TECHNICIAN. THE TREATMENT IS DRUG FREE, NON INVASIVE AND
HAS NO SIDE EFFECTS, AND ONLY TAKES A FEW MINUTES A DAY FOR A FEW WEEKS
SO WRITE/FAX/CALL WAYNE
& STAFF AT 73 MAGAZINE ASAP--AT-WAYNE GREEN INC. 70 ROUTE 202N

> Does anyone have ant experiance, hints, or tips on converting a Motorola Mitrek VHF >band radio into a repeater?

Tune up the radio in the conventional manner.

Drill a 1/2" hole in the side of the radio just above the first IF stage coil; install a bulkhead BNC female connector. Chop the receive antenna lead off the antenna relay and use this connector to bring it out of the radio to your duplexer.

Clip out diodes D1, D2, and D403.

Add a control system. All the connections you need are on the control connector on the front of the radio.

Voila' - it's a repeater.

How about, "prevention is the best medicine"??? If you be sure that a person can't cheat, he most likely won't. I'm quite aware of this as a student full time; I've been told at the MCAT, for example, although there are physics and chemistry problems, calculators are not allowed, watches are not allowed that make any noise whatsoever, including beeping at the hour. You are not considered guilty, but they want to preclude the possibilities of any cheating. This is the whole purpose of proctors, or VE's. I've gone to things like math contests, where I had to demonstrate that my programmable calculator was empty, i.e., reset it, and let the proctors see the prompt, "reset ok."

: >Showing an empty hard drive or none at all is one very easy way to do this.
: > Certainly there are other waysto do this. Remember the onus in not on the
: >VEs to try to anticipate every possible way for someone to cheat, but to
: >ensure fair tests

: You failed to answer the question. What has a hard drive got to do
: with cheating? How is a hard drive going to help you cheat?

Somebody may say that you can have a program hooked to a mic that copies code. There are definitely those that can do so, given the proper audio input. Now the chances oF someone doing that *is* slim, but still the possibility exists.

All in MHO, and the institution can (disclaimer) think anything; whether or not it is what I do is purely coincidental.

You have ONE YEAR EXACTLY from the date of passing an exam element to use it
for getting a higher class license.

Someone noted that they passed the General written, but haven't passed 13 wpm.
You have exactly 1 year from the date of passing your general exam to pass
the 13 wpm exam (i.e. utilize the General written credit), after which the
written exam credit will expire.

Scott NF3I

I don't remember if it's, for example, Nov. 7, 1993 - Nov. 6, 1994, or
Nov. 7, 1993 - Nov. 7, 1994 (last day inclusive?)

From: witness@unixhub.SLAC.Stanford.EDU
Message-ID: <CLMzMK.EJw@unixhub.SLAC.Stanford.EDU>
Source record: 270603

Hi. Primarily I'm a disaster service worker who uses ham radio more for need than recreation, so keeping my HT always on my person isn't always the most practical option. Extra bulk, the risk of accidental damage, and infrequent use make it impractical. However, I DO need to keep it within ready reach at all times. One option is my car. My concern about storing it in the trunk of my car (along with my disaster supplies) is the summer heat and sun. I do not know what temperature specifications exist for most HTs (does anyone have any?), but I do know the NiCad batteries are rated up to 45 Celcius for storage. In the summer sun of California, I would think that the trunk of my car could get well over 55 Celcius.

Is this a concern that should keep me from storing an HT in my trunk during the summer months? Anyone have any similar experiences or wisdom to share?

thanks in advance --

> I would be most interested to hear about your experience with either
> of them, or even better a comparison between the two.

I've got a TS-440S-AT about which I have mixed feelings (but _mostly_ good). As a mobile rig and for general all-round use, it's nice; it has some problems with a high-QRM environment like a contest that might be improved by more filtered stages or something. It's got adequate selectivity from the 500-Hz filter on CW, but a really strong nearby signal can "pump" the AGC (that's a new term I saw here recently, but it certainly describes the effect well). Be nice if you could just shut off the AGC completely.

Quality control has been something of a problem. When I got it, the CPU died; it went back to the shop for a couple of months, they fixed and returned it, and the same thing happened again. Finally they said the problem was a bad socket for the CPU; they replaced that (but they'd had it for about four of the first six months I owned it), and it's worked fine ever since (five or six years, now). The other problem has been poor contact on the oscillator board. The oscillator that covers 20 meters quit working; I did a bit of troubleshooting, and tracked it down to a cold joint on the board. I re-soldered it, and 20 has been fine ever since. But the oscillator for 10 meters just recently did the same thing; I haven't had a chance to do the troubleshooting yet, but I don't expect it to be a serious problem to fix. One good thing is that you can get to the circuits fairly easily.

It lacks an output/input for a transverter; this is annoying me right now, as I'd like to use it as an IF for 2 meters and 70 cm. If that's not a concern, ignore the comment.

In its defense, I should add that I use it hard, dragging it in and out of the house, and operating it from the car. It runs off a car battery nicely at reduced power for emergency operation, and has enough bells and whistles to (almost) keep me happy.

Get one with the built-in antenna tuner. When I bought it, I was really looking for one without it--big mistake in hindsight. I'm really glad I could only find the ones _with_ the tuner.

The term "pathloss" can be misleading since in freespace signal isn't
lost. Radio waves are divergant. The illuminated area increases as the
square of the distance. Focus the power better and you get more in the
receiving "bucket". With constant antenna aperture (physical size once
you get beyond dipoles) this is more effectively done at shorter
wavelengths/higher frequencies.

Signals appear to drop because the aperture of the antenna "catching"
it is getting smaller compared to the total illuminated area at 1/D^2.
This is exactly why shorter paths and shorter wavelengths are better.

> I think that my point here is that LOS paths aren't practical for most
> amateur data links. The ability to get LOS paths is very terrain specific,
> and very $$$ specific. They either require fortuitous high sites, or
> very expensive microwave towers.

This is true, but if we are considering "competetive" information
systems and networks, something that can hold a candle to 10's or 100's
of Kbs *to the user* we have to consider how to efficiently pipe
information around. If we can't find a way to make shorter and better
quality paths practical, in the end we aren't going to be able to
compete with the alternatives.

> I agree it isn't practical to get multi-megabit systems below the

> resources of a major public utility. Amateurs are going to have to accept
> lower data rates in order to stretch out the distance between available
> sites enough to make the system practical.

I guess our difference is in what we consider acceptable. I agree that
building a network is difficult and costly but I'm of the opinion that
if amateur radio is to stay viable and interesting in the sorts of ways
it has in the past; public service, emergency and a playground for the
"lay" technically inclined, that it has to have something to offer which

is at least similar to that which is available elsewhere. I'm not implying that we have to outdo the phone company but that in the information age we had better be able to transfer information reasonably well in contrast to the alternate commercial methods.

I don't see "new blood" being too enamored with a 100 bps to-the-user performance(I'm being charitable, most longhaul amateur datacomm is a good deal slower than this)over AR if 1000 times that is availble elsewhere.

While this isn't quite the case yet, it isn't far off. The "backbone" for the commercial system is constantly improving and a wireless connection to the "last mile" is about to rain on us from a multitude of vendors. I might point out that this backbone is effective because it uses short wavelengths and focussed energy; microwave/millimeterwave terrestrial and satellite networks and the really shortwave/focussed/guided medium: fiber.

> Power is cheap. Sites are few and expensive. We have to be able to use
> the sites *we can get* to build the network. Unlike a public utility,
> we can't just go out and condemn ideal sites where we need them for
> our microwave links. All of our path engineering has to revolve around
> what we can do with the sites we can get.

I agree that sites are of great value. I suppose a geostationary sites would be extremely valuable to amateurs but I don't agree that power is cheap nor really all that effective at making high information volume systems. Once one leaves quality paths, the cost of maintaining quality data flow is tremendous. Not only can't we generate enough power to overcome the additional losses and path variabilities cheaply but the excess power (that which doesn't get wasted in heating up the countryside) goes into removing the channel from reuse by other links (QRM). We need to be finding ways to use *less* power, not more, and not just because of the FCC mandate either.

Access to suitable sites may be one area where amateurs have an advantage over the big service providers. We are at least grass roots and already involved with repeaters and remote bases. Amateurs have a lot of "ins". Even the big telecom companies haven't been able to write off their huge investments and go out and replace all their old equipment in one fell swoop. If amateurs plan appropriately, we *might* be able to target something which will have value in the years to come. If we don't, I'm afraid that as a hobby, we haven't much hope of staying interesting.

> The link budget calc I did showed that a 90 mile forward scatter path

>
> Yes it is. We can *see* the antennas at each end.

I probably should have said "quality" instead of LOS. That your shorter
path has more loss than the longer one shows that it has a problem.

> >Local clutter is probably degrading things severely.
> >Antennas help a lot (2 dB of system improvement per dB of antenna gain)

That's what I meant by "local clutter". And notice that throwing power at it
in the situation probably doesn't fix it if the problem is multipath.

> path *does* work at 7 GHz because we have a commercial link there using
> 6 foot dishes at each end that does not suffer multipath. The narrower
> beam doesn't illuminate the multipath generating reflectors.

And that points out part of the value of microwave, small antennas give
you a more focussed beam. The 7 GHz system probably can run a good deal
less transmitter power and at the same time provide more opportunitiy for
reuse of the channel because it doesn't spray power so widely.

> Well I agree we can't compete with the phone company. Their resources
> are vastly greater than anything we could muster. But we can do a *lot*
> better than 1200 baud for our users. And *that* horribly slow speed has

I doubt that we can provide simultaneous 1200 bps to-the-user for even a
small fraction of US amateurs with a network of 56 kbps links at VHF.
And to date, very few users have seen anything near 1200 bps *throughput*
with the most common system.

> been enough to interest 20% of our ham population sufficiently to make

> That's a 47 times improvement over what we've got. We can do that for
> about $8 each per year from active packeteers, and a lot of volunteer
> labor.

I hope you are right that such a network could maintain interest in AR,
but I guess I don't believe it. Not if someone potentially interested
can get inexpensive worldwide connectivity with high throughput and a
host of services and if wireless connection to all this is also economical.
Once there is fiber to the home, things just get worse for a lowspeed,
RF-bound system.

> The highest traffic flows are on the user MANs. In some cases where
> local topographic conditions permit, those MANs could be shifted to

> higher speed. But for the intercity trunks, I don't think we can do

Higher speed cluster access was the point of our Hubmaster protocol (ARRL CNC #9). And it may be that social and other common interest issues keep the highest information volume local. However, even if the backbones don't have to be orders of magnitude faster than the local channels, the local channels have to be fast enough to be "interesting". This isn't going to happen with a small amount of VHF spectrum in most urban areas (if interested, see my other paper in CNC #9). With realizable antennas, the beamwidths are going to be wide and the available channel speed will be divided among the users. Very rapidly, a busy 56kbps channel becomes slower than a quiet 1200 bps channel. A highspeed link does not a highspeed network make.

> megabit microwave trunks nationwide. There are just too many miles
> where there are no hams, and no suitable sites for the asking. Current
> inter-MAN traffic demand doesn't justify it even if we could do it,
> but I suspect that "build it and they will come" would be in effect
> if we could possibly do it. I just don't see any way we could get
> the sites. Even if the telcos *gave* us their old microwave sites,
> I don't think we could find the manpower to maintain them.

I don't have an answer either except that perhaps a few geostationary transponders could do a lot for long haul and perhaps mitigate the problem. In any case, we *must* make effective use of resources if we are to pull it off. This means efficient energy/information transfer which is going to require focussed beams and/or guided waves. This simply isn't going to be possible at VHF.

It may be that AR will have to use existing carriers, like the IP encapsulation presently done using the Internet, for long haul. I'm not sure that in the longterm I can identify the value added by amateur radio if this trend is taken to the limit. In any case, I think there is no question that we are going to have to coordinate and cooperate. This is why I would hate to see a plan which falls short of the necessary minimum required to suceed.

I guess I'm changing my mind about what "build it and they will come" means in AR. I'm afraid it means:

build it all, everything in place to provide highspeed user access worldwide, user access h/w, s/w and a host of free services and applications.

offer it for "less than you can imagine" (certainly less than the XYL pain-threshold of $500 or so), available by charge card from all the mail order suppliers

make it totatally turnkey, there must be no way for the user to mess it up

and they will come. They will complain that it was done wrong, doesn't work well enough, is a ripoff and they could have done it better. *but* they will come and use it.

My apologies to the original poster for this severe drift. I'll QRT now.

1957. Smallest, lightest 2 meter HT? (Backpacking)

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-22 18:37:23 UTC
From: turner@safety.ICS.UCI.EDU
Message-ID: <9402221037.aa26716@paris.ics.uci.edu>
Source record: 270608

Anyone have an opinion on the smallest and lightest 2 meter HT out there on the market (even if it is not currently sold new?) I would require a watt or a little more output, PL tones, but don't really care about memories much. I would require some sort of alkaline battery pack.

My plan is to hike a long piece of the High Sierra, or possibly a long stretch of the Appalachian Trail from Maine south for the summer. I just turned 40, and things are looking bleak from the inside, I need a lot of time to think.

So, I am going to backpack, and must go for 7 to 10 days at a time without resupply. All my items must be light and pack very well. The two luxury items I plan to take are an HT for 2 meters, and the NorCal 40 CW transceiver, for weekly contacts and any possible emergency. I may take one or the other alone, but the next few months of planning and shakedown cruises will tell the tale.

SO.....anyone ever look into this? I am NOT concerned with brands, ruggedness is not the main factor here either. Weight and size are the controlling dimensions.

Clark
WA3JPG

P.S. Anyone else planning long backpacking runs down the AT or the Sierras this summer?

I will be travelling to Cairo in the near future. I have been told to forget about bringing any amateur radio equipment as there is no possibility of getting an operating license there.

But I was also told by the ARRL to not even bring a short wave receiver/alarm clock/AM/FM Radio as they were very strict on any type of radio equipment.

Does anyone have any first hand knowledge of this?

Thanks

Bill

1961. FCC FTP Site Operational

1964. Re: Coax minimum-loss impeance

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-22 20:12:03 UTC
From: tomb@lsid.hp.com
Message-ID: <CLn6s3.5Bt@hpcvsnz.cv.hp.com>
Source record: 270615

I recently wrote:

: OK, carrying this one step further, the outer-diameter/inner-diameter
: ratio for min loss under these conditions is 3.59:1. With air
: dielectric, this is the 77 ohm cable. But if the dielectric is
: polyethelene, commonly used in WWII vintage cables, the impedance
: is ... 51.02 ohms! By the way, doing the same thing for solid
: Teflon gives 52.9 ohms, still really close to 50.

Some follow-up thoughts to this.

Independent of impedance, and indpendent of conductor configuration (coaxial, 2-wire open line, 4-wire line, twin-ax, etc.), if you start with air-insulated line and replace the air with dielectric with a dielectric contstant greater than air, the impedance of the line will drop. Under matched condtions (which will be the lowest loss for that line), you would have to put more current in the line for the same power delivered to the load. Because the increased current causes greater I^2*R loss in the conductors, the line will have greater loss than the air-insulated line--even with a dielectric which is completely non-dissipative.

If you then make the conductor(s) smaller to get back to the original impedance in the same volume, you will further increase the line loss.

If you can use the same condutors at a higher impedance, the loss will be lower: you can do this with open-wire line, at least up to the point where the spacing allows radiation that significantly adds to the loss (and might also cause other problems, like messing up an antenna pattern or causing a security leak).

1965. DIY Audio Notch Filter ?

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-22 20:22:16 UTC
From: harland@otter.mech.ubc.ca
Message-ID: <2kdpho$b34@nntp.ucs.ubc.ca>
Source record: 270616

Does anybody have plans for a DIY audio notch filter ?
Am I looking to build one that has both variable centre
frequency and bandwidth.

MFJ sell a unit that is just what I am looking for,
but the price is more than I am will to pay. In their
unit you can adjust both centre frequency and bandwidth
independently.

I have found a circuit that uses an OP-amp and three
resistors. The problem is that it is not possible to
vary the bandwith / centre frequency with out messing
up the other or the gain. I suppose this circuit may
work but it would not be very useable.

I am not a elecronics wiz but I have built circuits
in the past, so I am not afraid to give this a try.

Thanks, Harland

I suppose I have to add my voice to the chorus of Heathkit supporters! I too have built dozens of their kits from the late 50s on, a few of them still in use in my shack!

I had a few problems with missing parts and a few defective parts. The only "puzzler" I can remember was a piece of glass in a tube on my SB101. The receiver would work upside down on the bench, but would go dead when I turned it right side up. Replacing the tube fixed it - the rig worked great when I sold it 10 years later!

Heathkit - RIP.

This sort of conjures up the stereotype of the ham who is too lazy
to get out of his operating chair and walk somewhere. Someone once
told me that Real DXers[tm] have country counts equal to their weight
in lbs.

From what I've seen of the typical hamfest ham, most of them could
do with a bit more walking around.

where I took my exams, if you do not pass the codes, they don't let you
take the written exams (makes sense). So your being able to take the
written exam without the 13 wpm is something new to me.

I'd like to hear other opinions about this also. My 1988 Acura Integra (another Honda product, for those who may not know) has exhibited a fair amount of ignition noise since it was new. It's not coming through the power cord, as it exists even on battery operated rigs.

I've had them check everything they could, and replaced the distributor cap and rotor. I also had the 'ignitor' replaced on recall (whatever that is). It's still pretty noisy on my 2 m. HT and scanner.

Any ideas? (other than get rid of the car, I mean)

Cheers,
Tom

> You failed to answer the question. What has a hard drive got to do
> with cheating? How is a hard drive going to help you cheat?

As I stated in my previous post, I have no idea how you might use a hard drive to cheat and I don't care! That is my answer - IT DOESN'T MATTER!

I would feel the same about bringing in absolutly anything that is not needed in the exam room - a dictionary, a book on morse code, or a tape recorder all fall into that class.

My point is that you shouldn't have any question of cheating.

This is not a contest to see what creative things you can do to "get around" the VEs - they are volunteers who are trying to help people show they are qualified and "sticking their necks out" to do so I might add. If someone cheats in one of my VE sessions *my* license and reputation is on the line! I don't intend to risk either just to be a "nice guy", but I will do all I can to help someone who has a legitimate problem.

If you don't like it then you are free either to do it better or try to find someone else who will, certainly it won't cost *me* any money or any sleep.

If I run the testing session you will have to show me that you don't have anything that could allow you to cheat - period. I suspect that you will find just about every other VE feels the same way.

Don't know about the specs, but off and on I have kept my IC24AT and before
that a Motorola HT under the front seat of my car in the Arizona sun for
many years. I make sure they are out of the direct sunlight, but don't do
anything else special.

I have an Alinco DR590 that has been in the car full time for three years
now without problems.

Bottom line IMHO is that you shouldn't have any trouble with reasonable
care, although you might shorten the life of the NiCads some.

SB QST ARL ARLB020
ARLB020 SM election results

Ballots have been counted in Section Manager elections for North Carolina, Pacific. Their terms of office begin April 1, 1994.

The results are as follows:

In the North Carolina Section
Eugene Ribas, Jr N4UMI, 179
Carl Smith, N4AA, 675
Reed Whitten, AB4W, 726
Whitten was declared elected.

In the Pacific Section
Chester Koga, NH6YW, 113
Bob Schneider, AH6J, 141
Schneider was declared elected.

Six other Sections were not contested. The following were declared elected.

In the Eastern New York Section
Paul Vydareny, WB2VUK

In the Eastern Pennsylvania Section
Robert Stanhope, KB3YS

In the Louisiana Section
Lionel Oubre, K5DPG

In the San Diego Section
Patrick Bunsokd, WA6MHZ

In the South Dakota Section
Roland Cory, W0YMB

In the Virginia Section
Edward Dingler, N4KSO

>I would think that the trunk of my car could get well over 55 Celcius.

A Ni-Cad may not leak at 45 celsius, but the self discharge
rate will be so high that the battery pack will be useless when you
need it. You would have to recharge the battery pack daily. If you
want a radio with instant emergency usefulness, consider a
walkie-talkie with Lithium Batteries. It will have a shelf life of
about 10 years.

Failing that, keep the radio in the trunk, keep a couple of
packs with alkalines in the glove compartment and use the batteries
somewhere else after 6 months. You may also keep a Ni-Cad pack in the
car, but it should be recharged weekly in the summer.

Note that Ni-Cads are have terrible self discharge curves.
Sitting on a shelf, a Ni-Cad pack will be pretty flat after a month.
An Alkaline pack will be fine after 18 Months. The best batteries for
storage are Lithium. But they are hard to find and no company that I
know of currently makes lithium battery packs for walkie-talkies.

>Is this a concern that should keep me from storing an HT in my trunk during
>the summer months? Anyone have any similar experiences or wisdom to share?

The batteries and the electronics will be happier if kept
cool. I store Alkalines in the Freezer and Ni-Cads in the fridge -
right next to the beer.

ARLX008 Invitation to Cuba

Invitation to Cuba

The Cuban Amateur Radio community has invited American amateurs to participate in a joint operation with Cuban amateurs in the 1994 ARRL June VHF QSO Party.

ARRL Oklahoma Section Manager Joe Lynch, N6CL, was invited to lead the group, during a visit to Cuba the week of February 7. The operation would take place from Bellomonte. Officials of the Federacion Radioaficionados de Cuba (FRC) said they also have taken under consideration a proposal from an American group for a joint operation from Cuba on the HF bands in 1995.

Lynch, in Cuba for a week as a member of a Methodist Church work team, extended greetings from ARRL officials, presented FRC President Ing. Pedro Rodriguez, CO2RP, with a certificate of participation for the June 1993 ARRL VHF QSO Party, and also presented an author's certificate to Arne Coro, CO2KK, for his article in December 1993 QST.

Lynch's informal meetings with FRC officials were publicized on radio, television, and in the print media.

Joe Lynch is VHF editor of CQ Magazine and also is editor of the QCWA Journal.

I believe the part in question is the IGNITER. It looks like a large
two-bladed fuse. I have a 1990 Civic which was nice and quiet until I had
Honda tune it up. Then it was noisy. That went on for about 7 months.
Then the darn thing failed. No warning. It just quit.

I got the igniter replaced and the noise went away.

I suggest that you suggest to Honda that they try another igniter and see
if that cures your noise problem.

Hope that this solves your problem and that it does not fail on you.

Well, yeah, it does sort of conjure up that stereotype.

But even Daytonites don't walk.

Last year at Dayton, we were staying at the Radisson (with the rest of the RTTY types!). After an afternoon of wandering around the show, I had myself a craving for a bit of orange juice. I'd have ordered from room service, but I wasn't about to pay that kind of money for simple OJ. I checked at the gas station right there at the Radisson -- no luck. I asked at the front desk if there was some place I could go. They suggested a mall down the street. Having no car, I asked them if the mall was within walking distance. Their answer was to strongly suggest that I NOT walk along the road, no matter how far I was going, because the road was DANGEROUS. Of course, I DID end up walking along the road -- across the street and down to the convenience store a half-block down. No death or dismemberment, but it wasn't a good time, either (no sidewalk except across the I-75 bridge, rushing traffic, etc.)...

I'm personally hoping that the Radisson is going to be running shuttles to the show, because I don't relish sitting in the traffic jam (which happened last year, even with loaded busses) for an hour or more in a Standard-Shift vehicle, and it's WAAAAAY too far from the Radisson to walk, even if the road wasn't 'DANGEROUS', as the folks at the Radisson claim.

The manual says something about the last 3 DTMF digits being displayed
in memory 7, but did not mention the fact that it scrolls! :)

My old Icom manuals had more pictures and charts than my FT-530 book
does. I liked that. The FT-530's manual is also incorrect in a few
places, REALLY annoying. Oh well...still a good radio...

Message-ID: <1994Feb23.003024.15282@jupiter.sun.csd.unb.ca>
Source record: 270682

am looking for a small low power (<1 watt) tx/rx modules that can be
commercially designed into a small microprocessor control system for
a piece of hydraulic equipment over a distance of about 100 feet. Does
anyone know where I might obtain some devices in the UHF/VHF region that
would be simple to interface to? Ideally, I would pump TTL serial data into the Tx module
at 1200-9600 baud and at the other end, out would pop the TTL data
from the Rx module. I am not concerned with errors as I can packetize the data
and protect it sufficiently with CRCs etc. What I am concerned about is that
I am a microprocessor person and I don't want to become an RF designer to
implement this otherwise straightforward project! Actually, flea power
might be sufficient such as 100mW. Some may want to point me in the
right direction here as well.

Thanks for any help!

DAILY SUMMARY OF SOLAR GEOPHYSICAL ACT

22 FEBRUARY, 1994

/\

(Based In-Part On SESC Observational Data)

SOLAR AND GEOPHYSICAL ACT

NOTE: The GOES greater than 2 MeV electron detectors are contaminated during
high energy proton events. For this reason, the electron fluence
values for 20 to 22 February are suspect and should be disregarded.

The 3-Hr Ap Indices for 21 FEB 94 are: 8 9 14 110 103 122 42 87
Greater than 2 MeV Electron Fluence for 21 FEB is: 1.6E+08

SYNOPSIS OF ACT

Solar activity was low. Just one unobserved C-class event
was recorded. Region 7671 (N10W42) continues its slow decay.
Three new regions were assigned, 7675 (S12E41), 7676 (N09E50),
and 7677 (N20W12).

Solar activity forecast: solar activity is expected to be
low.

The geomagnetic field has been at predominantly major
storm levels the past 24 hours. Intervals of severe storm
conditions were observed in nighttime sectors. This disturbance
has gradually weakened throughout the day. The greater than 10
MeV proton event ended at 0050Z. The polar cap absorption ended
at 1525Z.

Geophysical activity forecast: the geomagnetic field is
expected to be at active to minor storm levels during the
next 24 hours. Episodes of major storming may occur in
nighttime sectors. A small coronal hole now positioned
near W30 may further fuel the activity in the near term.
Strictly unsettled conditions are anticipated by Feb. 25.

Event probabilities 23 feb-25 feb

Class M 05/05/05
Class X 01/01/01
Proton 05/05/05
PCAF Yellow

Geomagnetic activity probabilities 23 feb-25 feb

A. Middle Latitudes
Active 15/20/15
Minor Storm 25/20/10
Major-Severe Storm 25/10/01

B. High Latitudes
Active 15/25/20
Minor Storm 25/20/15
Major-Severe Storm 35/15/05

HF propagation conditions over the high and polar latitude
paths continued to be essentially useless throughout the day.
Moderate to periods of strong degradation were also observed
throughout the day over many middle latitude regions, although
some improvements are gradually becoming apparent over these
regions. Gradual improvements are expected over the next 72
hours, although a return to near-normal conditions is not
expected for several days yet, particularly over the high and
polar latitude paths where residual substorm activity and
renewed activity from the above-noted coronal hole may keep
propagation at poor to very poor levels for much of this week.

------ ---- ---- ---- ---- -- ------ ------ --------------------------
NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.

All times associated with x-ray flares (ex. flares which produce associated x-ray bursts) refer to the begin, max, and end times of the x-rays. Flares which are not associated with x-ray signatures use the optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

At the time for your exam, you should have been issued a CSCE for the written and CW elements you were able to pass. That CSCE is valid for exactly one year - and no more. [I had a fellow who came in to our exam session one year plus one day after his CSCE had been issued and very unfortunately, it was no longer valid.]

No fixation. But I do have to use the facility at least once per day - hard to ignore what goes on; should I close my eyes?

>BTW my Local Notice to Mariners this month stated that 500Khz CW was
>discontinued to allow 518Khz SITOR - the CG feels that is a much more
>useful service I guess. Oh well.

That's old news. BUT the HF maritime CW bands are still jumping with activity and the C.G. is still monitoring them, so CW on the high seas frequencies is still very much in use.

From: andrew@zone4.ocunix.on.ca
Message-ID: <2keuj5$jpu@zone4.ocunix.on.ca>
Source record: 270691

I'm thinking of buying a scanner from ACE Communications in Indianapolis, Indiana. I sent a request for info to their fax line, and called their tech support; both times, I got ignored---so I'm kind of wary. Nonetheless, they've got the best price I've seen. I'd like to hear comments about them one way or another---anybody do business with them? I'm especially interested if you did business with them from a country other than the USA, since that's my situation... but *any* info would be helpful.

Thanks...

Andrew Jr.

Yes. Have them replace your ignition wires with low-noise type. I believe
that they are sometimes called Silicon Ignition Wires - but I may be wrong.
When I replaced the wires on my Bronco II, it made a world of difference.

Does anyone know where to find or how to build a radio receiver that
picks up MSK (minimium shift keying) modulated 100 bits/sec data
transmitted on aprox 300 kHz carrier signal?

This would be used to receive differential GPS-corrections from a
reference station.

Any pointers?

No, it's not a joke. Wayne Green seems to believe he has found the
cure. He editorializes about it in the same column in which he
expounds the virtues of cold fusion. And psience. Well, anyway,
he's been on that toot for several months now.

Perhaps his next 'small business venture' will be a medicine show
and carnival.

(Too bad you can't make effective hand gestures on USENET :-))

I had a Mercury Topaz that exhibited similar problems for
about two months, after which the ignition coil failed and
I sat at the side of the road for a while. When the dealer
replaced the coil, all the noise problems went away, and they
even left my big coaxial capacitor in place on the lead to the
new coil. The Topaz also had an electric fuel pump inside the
gasoline tank which generated tremendous amounts of RF hash.
Ford has a standard RF filter for the fuel pump.

I have a 1987 Acura Integra.. I run a Ten Tec Argonaut 509 both SSB adn CW.

I had some ignition noise problems at first. I rewired all the power directly
to the battery and purchased the Radio Shack noise suppression kt (think
about $15). Seemed to take care of the problem. Still get noise from over
head power lines.. but on most highways.. no problem

Source record: 270703

This whole issue is just another indication that the ARRL is more interested in protecting itself than serving the amateur community. How can the ARRL possibly claim copyright on data collected and compiled by individual volunteers from sources other than the ARRL? Surely they don't believe the volunteers sat down and transcribed the contents of the ARRL repeater directory... I have one of those and it's the last place I look for valid information (lots of inaccurate listings for Arizona). Since the ARRL doesn't seem to pursue other published repeater directories (go look in any HRO across the country), it would seem it has no legal claim to data or format. I might add that those rags usually charge money, Conway's on-line directory is free.

Is the ARRL just upset because somebody beat them to it? Internet users have been asking for an on-line directory for years. Now that somebody has finally taken the challenge, the ARRL gets nasty and legal instead of helpful and supportive.

I am a member of the ARRL and I am not happy. I expect the ARRL to be out there fighting the battles that really matter such as spectrum disappearing to the government auction block, streamlining the FCC's licensing procedures, and protecting our rights to communicate. Instead I get an ARRL that seems only concerned with protecting itself (fighting with other VEC's about who's going to administer callsigns, defending high speed CW code tests, and this directory matter).

They better take a clue from the NRA. If the ARRL wants to be another organization that slowly erodes its own members support and continually loses influence, then it can continue to pursue these petty matters. If however, the ARRL wants to be a leader, grow in support and influence, then it better start listening to the members and doing whatever it takes to help the amateur community.

2002. Hammarlund HQ105TR - What is it?

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-23 15:40:37 UTC
From: karayan@blitzen.cc.bellcore.com
Message-ID: <2kftdl$pmu@blitzen.cc.bellcore.com>
Source record: 270704

In a local antique store I found an old Hammarlund boatanchor with model number HQ105TR. My question is simple: What is it?

The owner claims that it is a ham rig, but I'm not sure. In the back there are provisions for coax, and two jacks that LOOK like mike and key, but are unmarked. The bandspread knob has markings for CB channels (!), which confuses the issue. From the dials I can see that coverage is 2-30 MHz. Could it be a receiver only?

Also, is it worth the $60 they are asking for, assuming working order? Any help would be appreciated.

Someone said that between 30 and 225 MHz, transmitter spurs are limited to 60dB down from the carrier. That is true only of transmitters running 25 watts or more. The limit for transmitters running less than 25 watts is 25uW or -40dB whichever is larger. The Ramsey FX-146 is limited to 25uW spurs by FCC rules. That means the 3.7 watt FX-146 tested by the ARRL had to meet a -52dBc spec, not a -60dBc spec. My silent key buddy, Bob, W7FEZ, tuned his FX-146 for 2.5 watts output. We tested it on a spectrum analyzer before and after the modification. Spurs were at -48dBc before and -54dBc after. It had to meet a -50dBc spec at a 2.5 watt output. That's where the earlier -48dB and -50dB figures came from. I think 10 log(3.7/.000025) is 51.7 dB.

The Ramsey mods are on world.std.com under /pub/hamradio/mods/ramsey. For those without accounts, ftp.std.com is supposed to work.

>I'm an ARRL member, and considering ARRL put a fair amount of effort into
>compiling the Repeater Directory, I'd feel they weren't using my money
>wisely if they did _not_ enforce their copyright to the Directory. I doubt
>they said they _own_ the _facts_ represented there, but still you can't
>just rip off their effort to create your own competing directory, on-line
>or printed. Many city directories bury errors in their compilations, and
>have sued people who reproduce those same errors.

I don't know how much "work" would be included in the repeater directory that is direct league work. they get their "feed" from the repeater coordination bodies around the country (in the belief that the only good repeater is a coordinated repeater). i have heard a news story on the radio about how southern bell's copyright on a yellow pages book does not cover facts like where the advertiser is. They do have the copyright on the way their book is assembled.

There are multiple callbook sources. The league even backed one of 'em for a while with their blessing (they sold it..).

Maybe if the online callbook guys make it easy for MACC, et al. to submit data to them, they could produce a book that cannot be said to infringe on the ARRL publication since it's based on the same facts as the ARRL book because it's taken from the same sources as the ARRL's book.

I have a real big problem with the idea that there are deliberate errors purposely induced into what should be a reference book. Maybe we should start a "repeater directory accuracy project" to confirm all the listings in the ARRL directory to see if content errors exist.

Maybe this extends to the handbook (egad!). It would not be good if it does.

2 meters a life saver

Amateur Radio may have saved a life when Diana Carlson, KC1SP, used a local repeater to report a possible suicide attempt to police.

Carlson, of Hudson, New Hampshire, was on her way to work at GenRad in Concord, Massachusetts, the morning of January 10, when she and another motorist observed a man climbing the railing of the Merrimack Bridge into the city. The man's auto was parked directly in front of Carlson.

While the other motorist talked to the man, Carlson first tried a call on 146.52, which she knew was sometimes monitored by the Westford, Massachusetts police, then switched to the 147.120 repeater in Billerica. Larry Garneau, N1QEZ, who was mobile, responded and passed the message to his wife, Virginia Garneau, N1QFA, who telephoned police.

An officer of the Tyngsboro Police arrived in time to pull the 27-year-old man from the railing of the bridge.

Carlson's husband David is N1JYX, her son is KA1VWX, and her daughter is KA1VUA.

>WT6P

The lowest power slug available from Bird for 2-30 MHz is the Model 50H. It does 50 Watts full scale.

I suspect that the problem with HF is that the pickoff element is such a small fraction of a wavelength at HF that it can't get enough power to drive the meter. Other manufacturers may make a compatible slug that will do lower power, but all I've got is the Bird catalog.

They do make a multirange meter (the 4410) that will give you 1 Watt full scale at 2-30 MHz. All you need is $599 + $179/slug that you just have to get rid of. Fat Chance.

Prices are from the 1991 catalog. They've probably gone up.

> Is there a Bird slug available that would do a credible job
> of measuring <5w signals in the range 3-30MHz?

WT6P-

I assume you refer to the common Bird model 43 wattmeter. According to the 1992 Bird catalog, the lowest power slug for 2-30 MHz, is the 50H, 50 watt element. Whether a <5 watt reading would be "credible" or not, is doubtful.

At the top of that frequency range, there is the 5A, 5 watt element for 25-60 MHz. The 1 watt and 2.5 watt elements aren't available below 30 MHz. The "milliwatt" elements aren't available below 70 MHz.

If you haven't bought your wattmeter yet, there is the Bird model 4310, which can use a single slug (4410-3) for 2-30 MHz, to switch-select 0-1, 3, 10, 100, 300, 1000 watts. Slug 4410-10 covers 25-80 MHz, with 0-0.1, 0.3, 1, 3, 10, 30,100 watts. In the 1986 price list, the 4410 was $495, the 4410-3 was $150 and the 4410-10 was $125. I'm fairly sure the prices are higher now!

As a point of interest, the model 43 is rated at 5% of full scale, while the 4310 is rated at 5% of any READING above 20% of full scale.

If his Acura behaves like my '88 Honda Civic Wagon does, replacing the ignition wires won't do a thing for him. Nor will replacing spark plugs, grounding the hood, etc. I've been trying for almost 2 years now to de-noise my wagon. The igniter replacement I had to have done back in September (car death) didn't help, either; it may have hurt a bit, I'm not sure anymore (I'm somewhat used to the noise now, so it would have to change rather drastically for me to notice).

My next car's gonna be something non-Honda... :-/

The problem is in the alternator. Somewhere around 30-40,000 miles
something will let go in the regulator. In addition to the increased
noise, you will notice an over voltage. Instead of the nominal 13.1 volts,
you will get something like 14.x volts. The car will still run good,
and for a long time too. You may notice a slight glow to the "alt" light
on the dash board at night. That is your cue that something is wrong.

I've had this happen twice, on my Citation, (which was an early model run
and had the predecessor alternator as on the Caprice), and on my old
Dodge's heavy duty alternator. BTW the Citation kept going until I sold it
at 75,000 miles, but the Dodge alternator conked out on the highway at
55,000 miles.

Well, "someone" was me. Sorry about that; it is indeed true that
transmitters between 30 and 225 MHz are limited to -60dBc spurs, except
that transmitters under 25W are limited to -40dBc spurs, never to exceed
25uW. A 200mW transmitter, for example, can have no spur greater than
20uW. The "whichever is larger" statment confused me at first; I think
the correct statement is "whichever is smaller", since a -50dBc spur
is smaller than a -40dBc spur.

This is really a policy discussion, and I've set the followups line
to rec.radio.amateur.policy.

Sorry Carl, didn't mean to slam Heathkit. My point was that in any
normal distribution of customers, by definition, there will be some on
each end of the spectrum outside the three sigma limit. Experiences
outside the three sigma limit ON EITHER END of the normal distribution
are not good points of reference. My experience with six Heathkits was
worse than my experience with four Ramsey FXs but I am only one point on
either distribution and I don't know exactly where either of my
experiences fall on the plot. We tend not to hear from customers with
average experiences.

This must be some holy creed inside CT, since they did the same thing to *BSD developers a while back, so most developers switched efforts to the Gracillis card. Gracillis were more than willing to let people develop software for their card - if they have a comparable product, I suggest you contact them, you may be pleasantly surprised.

Be sure to post repetative, boring posts of your progress so that we may compare it with the Hambluster :-)

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Special Note: Amateur Radio licenses usually arrive between 8 and 10 weeks after the test session. The FCC considers their processing time to be 90 days--from the date they receive the application. The FCC usually receives the application one to two weeks after the test session (once the VE Team and the coordinating VEC have completed their processing).

Note: Codeless Technician to Technician w/HF upgraders (who pass a Morse code test) will not receive a new license from the FCC. The existing Technician license plus the CSCE conveying the Morse code test credit is the only documentation issued for use of the additional HF privileges.

****

The following test session information is provided by the ARRL/VEC for the upcoming six to eight week period. For further information, please contact the test session CONTACT PERSON at the telephone number provided. If necessary, you may contact the ARRL/VEC at 203-666-1541 x282 for additional information. Electronic mail may be forwarded to the ARRL/VEC via USENET at "bjahnke@arrl.org" or via MCI Mail to MCI ID: 653-2312 or 215-5052.

Although the test session information presented here does not indicate whether walk-ins are accepted or not, most test sessions do allow walk-ins. We encourage you, however, to always contact the CONTACT PERSON at the telephone number provided so that the VE Team is aware that you be attending the test session.

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or how to locate Amateur Radio clubs, instructors, licensing classes and/or Novice examiners in your area; please contact the ARRL Educational Activities Department (EAD) at 203-666-1541 x219. The EAD can also provide information on recommended study materials. Electronic mail may be forwarded to the ARRL EAD via USENET at "rwhite@arrl.org" or via MCI Mail to MCI ID: 215-5052.

2017. US License Examination Opportunities Scheduled 2/23/94 to 5/9/94

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-23 17:58:43 UTC
From: bjahnke@arrl.org
Message-ID: <1995@bjj>
Source record: 270719
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Special Note: Amateur Radio licenses usually arrive between 8 and 10 weeks after the test session. The FCC considers their processing time to be 90 days--from the date they receive the application. The FCC usually receives the application one to two weeks after the test session (once the VE Team and the coordinating VEC have completed their processing).

Note: Codeless Technician to Technician w/HF upgraders (who pass a Morse code test) will not receive a new license from the FCC. The existing Technician license plus the CSCE conveying the Morse code test credit is the only documentation issued for use of the additional HF privileges.

****

The following test session information is provided by the ARRL/VEC for the upcoming six to eight week period. For further information, please contact the test session CONTACT PERSON at the telephone number provided. If necessary, you may contact the ARRL/VEC at 203-666-1541 x282 for additional information. Electronic mail may be forwarded to the ARRL/VEC via USENET at "bjahnke@arrl.org" or via MCI Mail to MCI ID: 653-2312 or 215-5052.

Although the test session information presented here does not indicate whether walk-ins are accepted or not, most test sessions do allow walk-ins. We encourage you, however, to always contact the CONTACT PERSON at the telephone number provided so that the VE Team is aware that you be attending the test session.

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or how to locate Amateur Radio clubs, instructors, licensing classes and/or Novice examiners in your area; please contact the ARRL Educational Activities Department (EAD) at 203-666-1541 x219. The EAD can also provide information on recommended study materials. Electronic mail may be forwarded to the ARRL EAD via USENET at "rwhite@arrl.org" or via MCI Mail to MCI ID: 215-5052.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC
which is coordinating this examination. This single-character
designator denotes the VEC as defined below. An "A" (for example)
indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not
find any examinations listed for your area, you may contact
any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 203-666-1541
The 1994 test fee is $5.75.

X = Anchorage ARC, 2628 Turnagain Parkway, Anchorage, AK 99517;
(d) 907-786-8121, (n) 907-243-2221 (or) 907-276-5121
(or) 907-274-5546

C = Central Alabama VEC, 1215 Dale Dr SE, Huntsville, AL 35801;
205-536-3904

N = Charlotte VEC, 227 Bennett Ln, Charlotte, NC 28213;
704-596-2168

D = Great Lakes ARC VEC Inc., PO Box 273, Glenview, IL 60025;
708-486-8019

E = Golden Empire ARS, PO Box 508, Chico, CA 95927; No phone.

G = Greater Los Angeles ARG, 9737 Noble Ave, Sepulveda, CA 91343;
818-892-2068, 805-822-1473.

J = Jefferson ARC, PO Box 24368, New Orleans, LA 70184-4368;
504-831-1613. Test fee for 1994 is $5.00.

K = Koolau ARC, 45-529 Nakuluai St, Kaneohe, HI 96744;
808-235-4132

L = Laurel ARC Inc., PO Box 3039, Laurel, MD 20709-0039;
(d) 301-572-5124, 301-317-7819, (n) 301-588-3924

M = The Milwaukee RAC Inc., 1737 N 116th St, Wauwatosa, WI 53226;
414-774-6999. Test fee for 1994 is $5.00.

H = Mountain ARC, PO Box 10, Burlington, WV 26710; 304-289-3576,
301-724-0674

P = PHD ARA Inc., PO Box 11, Liberty, MO 64068; 816-781-7313

>
There will be no problem taking an ordinary shortwave/alarm/am/fm radio
into Egypt for your own use. If there are restrictions on radio equipment,
it is probably on the type which can broadcast as well as receive.

>Honda product, for those who may not know) has exhibited a fair amount of

Besides buying AMERICAN, there may not be a fix to your problem. The acura may have independant coils for each spark plug (found on a few high perf. imports). These may not have been shielded very well causing ignition interference.

I have noticed that on many powerful ignition systems (e.g. single engine airplanes) there is so much noise that the S-meter on my HT always stays at about 3 to 5 (out of 9 max) when squelched out. Shut the motor off and the noise goes away. This is EMP noise, due to large transient current implulses that transmits broad-band noise.

Listen to your noise. If it sounds like a sine-wave that varies pitch with rpm, then it is alternator noise. If it sounds like static electricity (pops or clicks) that varies with rpm, then it is ignition noise. Try a filter from RS on the power leads, other than that buy AMERICAN.

14.x Volts is an overcharge state that can fry your car's battery. It is not designed to take more than 14.4V max. 13.6-13.8 nominally.

This could be true but not impossible!

>But I was also told by the ARRL to not even bring a short wave receiver/alarm
>clock/AM/FM Radio as they were very strict on any type of radio equipment.

What? This is not right. Do you expect that egyptians don't use any radio
at all or what? In fact the shortwave radio I own now was purchased
in Cairo. I guess it would be no problem to bring any of these stuff you
mentioned above, however, you may be asked to pay costumes unless you
declare that you are going to take them back with you on departure. Also,
you maybe surprised by the large number of sat. dishes in Cairo nowadays
if this is your image about Egypt :-)

Have a nice trip.

Khaled

>which is turned on or off before and after use.

>73-- Gary

Well, lets see what part 97 says under definitions:

(35) Repeater. An amateur station that automatically
retransmits the signals of other stations.

Yep, looks like you got a repeater, but so what? I can't find any thing
in part 97 that you are violating anyway. If you are causing interferance,
and are not coordinated, you would have to deal with it, but from what
you say, I see no violation here.

Can anyone else?

They were a general coverage receiver similar to the HQ100, but I think
with
different bandspread tuning, and a little one or two tube cw/am
transmitter
in the back that ran about 1-5 watts. Crystal controlled and ran on 11/10
meters
back when they were both ham bands I believe. (I'm pretty sure about the
10/11
part, I'm just not sure if 11 was still a ham band when the HQ105 was new
or
whether they were type approved for CB as well as 10 meters.) Might even
have
gone to other bands such as 15 meters or lower. I don't think it covered
80-10
though, although the receiver did.

I had use of a HQ100 for a while and owned a 170 - both seemed to be
pretty solid
for their day (late 60's early 70's) and I wouldn't turn down one now.
For listening
to broadcast SWL stations and doing some very casual hamming should be
fine. The

170/180 series had much better filtering and tuning for serious ham operating.

Don't know if you can still get crystals to fit the rig for cb use, or if it would
even be type approved - don't expect to get them off the shelf at radio shack.
FT243 types multiplied up to whatever ham bands it covers are probably easily
found at hamfests, friends shacks, etc...

Have fun.

>N3RKD

I don't know of any reason why you can't take all the written tests w/o passing a code test first. You certainly can have written credit w/o having code credit.

a long time ago this was not the case, but today there is no reason not to go ahead and give someone a written. having that credit can be an incentive to get moving on the code. I know I had extra written credit twice (the first time a few years ago, i never got my code up. the 2nd time, i did make it after about 3-4 months....)

sounds like your VE team needs to get up to date. I know we do written credit only --

Right. Anecdotes do not a proof make.

However it seems clear that on average Heathkits were better designed, packaged and documented than Ramsey kits. I haven't built a Ramsey kit, but I have examined ones others have purchased. It seems like with every one I saw, I could see design problems just by looking at the schematic. I've seen some Heathkits with design flaws too, but not to that extent. And the Heath construction manuals were fabulous. They always prided themselves on the quality of their manuals and over the years they developed it into an art form. The Ramsey manuals are not bad, but they are not up to Heathkit standards.

I'm rooting for Ramsey. Amateur Radio needs a good kit company, with just the kinds of products that Ramsey offers. With better designs and quality control, they could be making a real contribution to the hobby.

I was the one who did the Washington (state) part for Conway's project; my submission to him never saw the light of day because of the current hassle. I will say that I did a lot more than just copy the ARRL directory: most Western Washington repeaters in the list are ones I have personally confirmed. There are indeed corrections that I have included. One even came from DFing the repeater...bunny hunt practice.

I'd be willing to post my submission to Conway, with all the info that hasn't been independently verified deleted. Any interest?

Most VE teams today will give credit for ANY element passed. You don't
even need to take them in order. Theoretically, you could start at Extra,
and work DOWN to Novice, although at testing sessions we generally
recommend that people work UPwards. Occasionally, we have had a person
come in and have not realized that the "No-code Tech" exam ALSO consisted
of ELEMENT 2! So they are totally unprepared to take the Novice test,
and fail miserably, but ace the Tech 3A exam. How anyone could study for
a license and NOT know this is beyond me, but I HAVE seen it happen.

>73-- Gary

Well, lets see what part 97 says under definitions:

(35) Repeater. An amateur station that automatically
retransmits the signals of other stations.

Yep, looks like you got a repeater, but so what? I can't find any thing
in part 97 that you are violating anyway. If you are causing interferance,
and are not coordinated, you would have to deal with it, but from what
you say, I see no violation here.

Can anyone else?

Well,
Here is a really interesting example of how to treat the no-code
license. Think of Delphi as the internet equivelent to a no-code
ticket. Delphi brought a lot of new users into the internet just as the
no-code ticket brought a bunch of new hams in to amateur radio. Delphi,
like the no-code ticket is a good way for the uninitiated (those without
elmers) to get involved with a great communication medium. Instead of
flaming this guy or suggesting we abolish all Delphi users, it may be
more productive to suggest that he ftp from rtfm.mit.edu the FAQ for
news.announce.newusers or news.newusers.questions perhaps you could
read the FAQ directly from the newsgroups. There are also netiquette
docs out there, if you need some, I'll help find them for you.
Or if that doesn't work we can just give Jeff his address and he can
include it in this weeks call to the FCC. You never know this message
was sent via RF somewhere along the way!!!

> radio if you don't wear your baseball cap? Sheesh.

> ---Bill VanHorne

Bill,
Just curious, but I always thought that if you were wearing merely
a baseball cap, with or without your name and callsign, you were
generally considered to be nude.
I guess it just depends on where you hang your baseball cap ;).

2041. Re: Special Events Question

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-23 21:56:38 UTC
From: kr4ah@pegasus.cc.ucf.edu
Message-ID: <2kgjem$o6o@pegasus.cc.ucf.edu>
Source record: 270643

I'm sorry about the vacuois post. I'm using a new news reader
and it takes a little getting used to. This is what I meant to
post previously.

I am part of a group of hams that is planning a special event
for July 4 - 10, 1994. None of us has had any experience with this
kind of thing and we have a few questions that someone in this
group may be able to answer.

1) Is the period of July 4 - 10 a good or bad time?
2) We wanted to send a commemorative certificate and a QSL
card. Is it OK to ask the contact to send a 9x12 SASE?
Will this reduce the number of contacts appreciably?
3) How is the best way to spread the word about this event?
4) None of the hams involved has had a call or address for
long enough to be in any older callbook. How should the
QSL information be handled? Sending an address over the
air can be a problem. How can this be avoided?
5) Are there any hidden obstacles lurking out there to take
us by surprise?

Thanks for any input.

John -=- kr4ah.

The manager is 9A2AJ, who is one of the world's best QSLers.
He is mgr (and probably the op) for several other Cyprus
operations - P31A, P30ADA etc. I've never heard of a W2
mgr, but your card will get a reply just as fast via 9A2AJ
as it will from a typical W manager - probably much faster.

I among other DXers (actually my DXCC count is very close to my weight as I approach Honor Roll) could lose a few pounds. Then there are slim guys like Chod Harris. We're not all overweight.

As for Dayton, a walk to Salem Mall down the hill ain't unpleasant at all unless its a downpour (like '93), or freezing (like '82), or tropical like many other years. My group's philosophy (Armageddon ARC, Cleveland and the World) is to use the busses. Once you're hooked on letting them drive you to a nearby mall or your hotel, you'll never want to park again. You do get some dirty looks with a Johnson Viking II straddled on your lap, though.

Tis the season when hearts turn to Dayton. 73s....

My points: Some of "my generation" of high-school kids in the 60's built
Heathkits for fun, not just success or education, and

And for the hams in the 50's (especially) the Heath product
line was a lower cost alternative to buying off-the-shelf
ham gear. Unfortunately, by the 70's Heath was costly compared
with import competition.

: In a local antique store I found an old Hammarlund boatanchor with model number
: HQ105TR. My question is simple: What is it?

: The owner claims that it is a ham rig, but I'm not sure. In the back there
: are provisions for coax, and two jacks that LOOK like mike and key, but
: are unmarked. The bandspread knob has markings for CB channels (!), which
: confuses the issue. From the dials I can see that coverage is 2-30 MHz.
: Could it be a receiver only?

: Also, is it worth the $60 they are asking for, assuming working order?
: Any help would be appreciated.

Okay - I am not sure about this one - but let me give it a stab.
The HQ-105TR is *basically* an HQ-100 (100C if it has an analog clock)
general coverage 2-30MHz radio receiver PLUS a 5 watt AM CB transmitter.
The rig was manufactured by Hammarlund back in the late 50's and/or
early 60's.

I used the HQ-100C receiver with fairly good results for a few years
in the mid-60s as part of my Novice station. As to whether it is
worth $60 - hmmmm - well, if you want to work CB - I wouldn't buy
it for that purpose. If you want to do some shortwave listening with
an old tube-type rig for nostaglic purposes - sure, why not? Personally,
I would not bother with that rig. I would find something else, especially
if you want to monitor the ham bands.

>When I replaced the wires on my Bronco II, it made a world of difference.

If it is a noisy honda, fixing the wires will not help. The RFI is
coming directly from the igniter area in the distributor cap
neighborhood, and radiates very nicely into your antenna, and that of
passing cars.

When driving my truck, I can always tell if a honda is passing by. Unfortunately
when in our Honda, it is hard to get away from the noise...

I went ballistic as soon as I saw the 6mhz freqs posted as a place for pirates to use. I was debating with the poster prior to Dana joining in.

As I've said, I've got an entirely different outlook of this topic due to my Coast Guard days than anyone else one here. I don't expect you to understand or appreciate my views. And from what I hear from other Coast Guard units, what I experienced while at Monterey and here in Honolulu (willful interference during distress communications) was mild.
Willful interference on the ham bands doesn't jeopardize lives like it does on the aero and maritime channels. Get out of the narrow world that you live in, Jeff; there's more to the RF spectrum than the ham bands.

Sorry tim - that's not the solution. There has been a group of Jeep Cherokee
owners who have been trying for YEARS to quiet up our vehicles, and so far absolutely nothing works. In our case, the noise seems to be coming from the fuel injector circuits/computer...

I get a continueous S9 on my HF rig in the car - I even get noise on my factory installed FM radio!

wannabe implies one who wishes or acts in a way more consistent with a
group of individuals of which they are not a member. It is usually
used in a derogatory fashion. For example some people call no-codes
wannabe hams. If one were to speak with an artificial French accent they
may be called a wannbe french(wo)man. And if one acts like it is their
responsibility to enforce laws when it is not they are often called
wannabe cops (can you say security officer?).
Most police uniforms include a leather belt (and often wallet) imprinted
with a basket-weave design.
ergo. You were called a wannabe cop.

: What's gerbils got to do with gays? Is this 2 meter talk?
It has nothing to do with 2 meters. Perhaps 2 feet, but not 2 meters. If
you don't know, you really don't want to know. (is there an
alt.fan.Richard.Gere? :-)

Now, tell me, are you a born again Christian? HOw tall are your?

>commercial packages would be appreciated.

I'm interested in this too...but with a slight variation. :-) I'd like
one that I can compile and run under Linux / X11R5 (Xfree86 mono, with a
fairly old server...it's the one that was distributed with the very first
tinyX distribution).

On a similar note, if anyone knows of any X-based wefax programs, I'd like
to know about that, too.

Btw, I don't have real ftp, so if they're on a BBS somewhere, or if you
happen to know the full site/path/filename (for e-mail ftp), that would
all be most helpful. I'm even open to having someone e-mail me source, as
long as they check with me first (I'll want to route it via a different
UUCP path than the default).

Thanks,

Well Kirk, I have had the same mod done about one month ago and have the
same noise problem as you. However, after my last tune up, about a year
ago they had changed the plugs and rotor among other things, and I noticed
the problem with the noise was also there at that time.

With time the noise should go away, relatively, if I go by what I
experienced after the tune up last year. I am still waiting for the
problem to go down right now. It's not too bad on good strong sigs, but
weaker ones get very hard to make out. I haven't tried any type of noise
filtering yet, but my power is directly at the battery and I do have a
choke I may try when I have the time.

Let me know what you find.

Bye---- from a fellow honda owner, Dino

Source record: 270661

Conway Yee (yee@mipg.upenn.edu) writes:

> Recently, I received a polite letter from the ARRL lawyers
> threatening legal action if I continue on this project.
> Specifically, they state that the ARRL owns the FACTS present in the
> repeater directory and that the format of the database infringes
> upon the ARRL copyright.

John E. Taylor III (rohvm1.mah48d@rohmhaas.com) replies:

> I'm an ARRL member, and considering ARRL put a fair amount of effort
> into compiling the Repeater Directory, I'd feel they weren't using
> my money wisely if they did _not_ enforce their copyright to the
> Directory.

I'm an ARRL member, too, but I couldn't disagree more with John's opinion on this issue.

The ARRL Repeater Directory is a wonderfully handy little publication, and at six bucks a pop it's also one of the best deals around. I buy three of them whenever a new edition comes out: one for the shack, one for the car, and one that lives in the portable radio bag with the HTs. But for all its utility the Directory suffers from the same limitations as any hardcopy publication. For example,

o I live in an area blessed with tons of repeater activity. When I pull in a signal on a frequency with which I am unfamiliar, it's a painstaking task to identify all of the candidate repeaters. An online database could easily support this with a frequency lookup qualified by geographic are, distance from my QTH as calculated from great circle coordinates or grid square, etc.

o Keeping abreast of the local repeaters while traveling is also difficult since the Directory is usually not organized according to my travel route. With an online directory, I could extract and print a "repeater itinerary" that I could scan from top to bottom during the course of my trip.

o Although exploring the packet network via digipeaters is somewhat passe these days, I used to find it handy to select only high-level repeaters for this purpose. With location and altitude information from an online database, it would be possible to build theoretically promising paths for exploration.

I'm sure that other folks can think of many practical applications for an online database of repeater information that I haven't mentioned here, and I'll bet that may of then would be difficult or impossible armed only with

The ARRL directory.

While I certainly recognize the ARRL's right and obligation to protect its commercial interests, its primary purpose is supposed to be furthering the art and practice of amateur radio. When these two objectives come into conflict I for one expect it League to support the latter objective without even a moment of hesitation. The day the League's fiscal interests take priority over the best interests of amateur radio is the day my membership terminates.

I generally avoid the frequent ARRL flamefests in this forum, but this one really bothers me. Conway, I strongly encourage you to post the text of the letter you received from the League's counsel. Does anyone in the Pacific Division know if Brad Wyatt can be reached via the Internet?

And just for the record, I'd *still* buy my three annual copies of the Directory even if an online database were available.

Todd, KB6JXT

Some poor boob asked where other than the FCC mandated 27 MHz frequencies were the "pirates" been know to operate. Some other poor boob followed up with a list of where he had heard that type of operation.

Just helped out a friend at work with one of these Jeeps... It appears to have been the fuel injectors. I provided him with several of large clamp on ferrite slabs. He applied them close to the control box. It appears that they use some type of chopper drive on the stepper motors/solenoids within the fuel injectors.

The "beads" are approximately 1" long, .25 ID and .6 OD with a 60 ohm impedance starting in the low MHz... available from FairRite if I am not mistaken. They come as two halfs in a plastic holder so they can be added without taking connectors apart.

The noise level was significantly reduced... D. Labriola (N6CNB)......

I have to agree with Steve. I've seen manuals for the FT-411e and the 5200. The 5200 is adequate, but there are a few items that are not explained very clearly. The 411e manual just plain bites! My Icom W2A manual is clearly written with lots of pictures and diagrams to help convey concepts. This may not have been true of Icom manuals in the past, but in this day and age it's obvious that Icom puts a lot more time and effort into their manuals than Yaesu does. Not a slam on their products (my 5200 is great!), just their documentation.

How about fitting, say, a Mazda 3.9 litre turbo-Diesel ? There are a number of firms modifying petrol (gasoline) Range Rovers in this way as a means of fighting 13 miles/gal and $4/gal here in Britain, so I wonder if there are similar operations in the US despite your much cheaper fuel. If the problem is so intractable, and a fix is so desirable that people have spent years on it, then this could be an appropriate solution.

I've noticed that all of the different spectrum monitoring vehicles that I've looked at in various countries were Diesel powered, even the light car based ones. It is one way of fixing all the ignition and fuel-injection interference problems with absolute certainty in one move.

I just had to filter the clock and wipers in my Diesel 4x4.

Cheers
David

I guess I had average experiences. In the past I have bought pre-owned Heathkits (SB-104) that I had trouble tuning up (ended up needing some non-obvious parts replaced). I have built five "major" kits, of which I had problems with one where I lifted and broke a trace (hard to find, but not Heathkits fault) on a HW-9. My keyer has never had ALL the status LEDs working at once: since I can't easily get the original part, I've tries substitutes with no success. Now I've given up. All the _functions_ work, even if I can't just glance at the LED display to see what it is I'm doing. No problems at all with other projects, including my handheld frequency counter. When I originally calibrated it following the Heath instructions, I subsequently took it to work to check it out on the calibration lab's equipment. It was so solid to all displayable precision the tech couldn't believe I'd constructed it. No complaints from this average user :-)

'Of by and for the Radio Amateur...'

What an example of the ARRL 'not invented here' syndrome. I submit that:

1. League Pubs supposedly don't make money, so if a
workable free-ware replacement is available, great,
as it reduces costs associated with this very perishable
publication. Not to mention the costs associated with
obtaining it, since it's kind of hard to find at Walden
books.
2. There is one hell of a conflict-of-interest if the
ARRL wants to, at once, act as the official frequency
coordination authority, and then be proprietary with
the information which it collects. As a matter of
fact, it would seem that there is an unfair competitive
advantage.

As a League member I publically call upon the organization to make
available, at cost, the information it derives from its frequency
coordination activitys to Mr. Yee's project. Or perhaps for free,
since this gentleman is volunteering to do something "Of by and for
the Radio Amateur."

As far as I'm concerned, the League has two choices: either cooperate
with the on-line directory project, or at least get out of the way,
or abdicate its role as frequency coordinator for the United States,
resulting in chaos on the bands.

To me the choice is clear.

Mr. Sumner, get it done. And get out of the way.

Now.

Greg

P.S.: Personal to the ARRL reader of this newsgroup,
the 'worm' that sicced the legal sharks on Mr.
Yee in the first place: describing you as a
species of vermin is probably too good for you.
You know who you are. There's a bus leaving
in a little while. Be under it.

> he's been on that toot for several months now.

Yeah, I had read in Science magazine that Wayne was going to be publishing
a new journal dealing with cold fusion. I suspect the only subscribers may
be Pons and Fleishmann (is that the right name for the other "discoverer"
of cold fusion? Workin' from memory here.), so hopefully it will cost him
a bundle and will fade quickly into obscurity. Fortunately, the rest of the
scientific community seems to have attended the wake for cold fusion, but
not these guys.

2071. Clubstations in Ukraine

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-24 15:14:38 UTC
From: kenneth@Lise.Unit.NO
Message-ID: <2kig8u$kfr@ugle.unit.no>
Source record: 270672

Hi,
I'm planning to stay in Kiev, Ukraine, this summer as an exchange student.
I'd really like to get in contact with amateurs - especially club stations -
which I can visit during my time there.

If anybody could point me to the right persons to contact, I'd appreciate it.

Thanks,

Kenneth, LA7GIA.

Your car's computer should be shielded. My chevy's is in a thick tin can, but
the injectors are in the clear. Your noise may be coming from an improperly
shielded computer rather than EMP noise generated when your car is injecting
fuel.

> Will this reduce the number of contacts appreciably?

Indicate this in whatever publicity you send out. Also, you'll probably be asked on the air about how to get a QSL, and you can explain then, or just include in the exchange, "By the way, if you want our QSL/certificate, please send a 9x12 SASE to... No, I don't think it'll reduce the number of contacts; people contact special-events stations even when they don't want a card.

> 3) How is the best way to spread the word about this event?
> 4) None of the hams involved has had a call or address for
> long enough to be in any older callbook. How should the
> QSL information be handled? Sending an address over the
> air can be a problem. How can this be avoided?

Put the QSL address in your publicity. I'd recommend the following:
QST - Check their section on special-event operations, and get your information to them _early_ (like _now_).
CQ - Same thing. Send _early_.
WorldRadio - Same thing - all of these guys set up the issue for publi-
cation _'way_ in advance, so if you want to be listed, _send now_.
This newsgroup (and perhaps one of the other rec.radio.amateur groups) but this time, send a week or two before the event (as a reminder).
Packet Radio BBS system - also about two weeks before the event.

> 5) Are there any hidden obstacles lurking out there to take
> us by surprise?

Never participated myself, just enjoy working special-event stations.

>

Not only were the Heathkits, by and large, well designed from a functionality standpoint, they were specifically designed for the home-builder. This is a `critical success factor' for kits. For instance, the HW99, the last Heathkit that I worked on, had an on-board rf probe. You hooked up jumpers between portions circuits and the probe and aligned tuned circuits and oscillators using a vtvm and a freq counter. Clever.

I think that a well designed kit should be:
- easy to put together using simple tools
- be designed to work without requiring expensive instrumentation
. this may require very conservative designs
. design must deal with component to component variance in characteristics. For instance, for bipolar amp stages, have feed back to provide guaranteed gainn. Sure, this may require more stages, but the design will work for most builders.

It is the lack of this kind of design philosophy in Ramsey Kits that I do not like.

>I'm rooting for Ramsey. Amateur Radio needs a good kit company, with
>just the kinds of products that Ramsey offers. With better designs
>and quality control, they could be making a real contribution to the
>hobby.

We sure do need a good kit company. Unfortunately, Heathkit kit quit ham radio stuff before I got into it. :(

> where the advertiser is. They do have the copyright on the way their book is
> assembled.

All the disclaimer stuff about my not being an attorney...that's my
understanding of copyright law. Facts are public domain, but the
presentation of those facts is protectable by copyright. Also, I seem to
recall that, even though the effort may have been relatively small, still
the courts seem to have looked askance at merely copying somebody else's
listing without doing any original work yourself, and then claiming it's
your own. ARRL at least assembles the input from the different
coordinators.

> Maybe if the online callbook guys make it easy for MACC, et al. to submit data

> taken from the same sources as the ARRL's book.

Yes! If whoever it was that wanted to do the on-line directory were to
contact the coordinators himself, or solicit e-mail listings of repeaters
here...that sort of thing, then that, as I understand it, is okay. (Insert
"I am not an attorney" disclaimer here again)

> I have a real big problem with the idea that there are deliberate errors
> purposely induced into what should be a reference book. Maybe we should start
> a "repeater directory accuracy project" to confirm all the listings in the

Not suggesting that the ARRL does this...I think the city directory guys
put in a few phantom addresses or something, which doesn't really affect
the overall accuracy. I'm working from memory of something I read in the
BNA Patent, Trademark & Copyright Journal a few years ago.

>The ARRL then claims that using that information is a violation of
>their copyright on their Repeater Directory.

<snip>

Instead of getting hung up on legalities, let us look at from a
rational/economic view point.

Consider the following scenario. Assume that there is no method of enforcing
copyright on lists of facts. Also assume that it costs money to get a list
together. In absence of copyright, no one will be willing to compile the
list as they will surely lose money. This is because the moment they get
the list together, others will rip them off. The end result will be no
handy-dandy list for us to use. We will be worse off for sure.

So, what seems to be desirable is:
- to let copyright be used to ensure that people who invest in collecting
data get a fair return on their investment and
- yet, do not let copyright be used to prevent any one else from investing

money in compiling the facts.

These two seem to be in conflict. Salting the list with false entries is a great way out as the presence of these erroneous entries in some one else's list is prima facia evidence that they have not gathered data independently and are just ripping off the list.

So, in my opinion, ARRL is following the best strategy possible. If Yee's list is independently gathered then there should be and will be no problem whatsoever.

They are usually easy to spot, they are the loud CW signals that are calling CQ for hours at a time between the ham bands. Usually next to a SITOR or FAX signal. Sounds like electronic keyers (or computers :-) to me though - no one sends that regularly by hand for hours at a time.

I listen to them occasionally and rarely hear any actual traffic passed - but then I guess Jeff would say I am listening to the wrong HF band or something.

The traffic numbers seem to increment by 2-3 a day for the stations I monitor. I did hear a "traffic list" (waiting for transmission) that had 10 messages in it once though. They do keep *very* busy I guess :-)

I will post frequencies if I remember to write them down tonight.

From: JMG@tntech.edu
Message-ID: <01H99DY9QKROELNNS3@tntech.edu>
Source record: 270535

HI,

I am working on writing an article whose purpose it will be to help new
hams in their search for used HF gear.

I am very interested in personal opinions/comments that might help in
this matter.

here is the proposed outline:

HF Rigs, Buying Used Gear

- Some tubes vs all transistors and what it means to ham
- what bands does it cover (WARC?)
- what modes does it have (CW/SSB/FM/FSK)
- built in vs. external power supply
- size
- price range
- extras: RIT,XIT, adjustable IF, filtering, computer control for banswitching and such,
option available, dual VFO and its use, speech processing, other
- good bets in different price ranges
- is rig especially good on one mode (cw vs ssb)
- can rig be easily turned down to QRP levels (optional section)
- built in cw keyer or filters

thanks...

73

kr4ah@pegasus.cc.ucf.edu (John Meaker) writes:

> I am part of a group of hams that is planning a special event
>for July 4 - 10, 1994. None of us has had any experience with this
>kind of thing and we have a few questions that someone in this
>group may be able to answer.

Hi John. I organized a special event for Oregon's birthday (Feb 14)
a year ago -- Feb. 14, 1993. We had a couple stations operating
two different bands for a weekend. Most of this was 10 and 20 meters,
and just a few on 15 meters. We operated SSB, staying in the least
restrictive portion of the band -- in other words, General section
of the 20 meter phone band.

Contact QST in advance to get your special event listed in their
"special events" column. You can also do this with CQ and probably
73 magazine. That will help because you can just mention that for
contact information for many of the contacts. You will still have
to give a mailing address over the air. Just state every few contacts
that you will be giving it soon, and then every 5 minutes or so give
the mailing address.

It is absolutely OK to ask for a SASE. I stated that we had a
certificate, send SASE and QSL card for certificate, 9X12 envelope
with $0.59 postage if you don't want the certificate folded.

Plan on having just QSL cards show up, as well as envelopes
with insufficient postage -- common on the 9X12's which require
$0.59, you will have those show up with just $0.29. You will even
get some of those postage due. I just paid the postage due and
sent a folded certificate when just a QSL card came in the mail.

You will have most of the responses show up within a couple weeks,
but expect some to show up much later. I had one response about
6 months after our special event. For our weekend special event
we made over 900 contacts, sent out over 500 certificates. So I
would figure on slightly better than 50% of the contacts will QSL.

Best advice is to listen to some special events before you do yours.
See what style of operation you like, and what seems to work and
what doesn't. You could also see if there is a special event taking
place in your area and volunteer to work a couple hours on that.
Talk to someone in a ham club in your area that has worked a number
of special events and ask to take a look at the certificates to get
some ideas of what you want to do for yours.

73 & good luck, Dale. N7PEX

If this is the same fellow I talked to at American Honda last year, I'll be curious to see what kind of response anyone gets. The man was unpleasant and condescending on the telephone. He basically indicated that he had told Ed Hare that there was no problem, so why was I bothering him?

My basic feeling after the call was: "OK, I won't bother you again, or buy your product ever again". I got the impression from comments made by the

regional FCC fellow who talked at Manchester, NH last year that the FCC is concerned with the excessive RF emissions from automobile systems. He also praised Chrysler for spending significant dollars to build a test chamber and make their vehicles RF quiet. His comments have sparked some interest with me in buying from Chrysler.

Oh, and the Chrysler person who wrote their EMC policy indicated the proper ordering code when having a car constructed to ensure low RF emissions electronic modules will be used (adds maybe $17 to the sticker price).

2086. Super Morse version 4.04 question

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-24 17:08:49 UTC
From: rwiley@magnus.acs.ohio-state.edu
Message-ID: <2kimv1$ed5@charm.magnus.acs.ohio-state.edu>
Source record: 270538

I have been using Super Morse version 4.04 for a while now, and have encountered a problem while attempting to use it in Windows v. 3.1. When I attempt to have it send code, it groups letters together. For example, if I had it send the word 'AT', it comes out with a letter W. This, however, does not happen if I shut down windows, and load it from DOS. I don't really believe my system would be in question (486 SX-25 w/4 megs of RAM), since it's a fairly normal setup. Any suggestions?

Dan,

I was wondering what (if anything) you (or anyone else for that matter) might have heard about the recent lines of GM automobiles. The time has come that I am thinking about a newer automobile. I would certainly like to come to the dealership knowledgeable about any problems of RF noise, RF shutting down the internal engine computer, ect. There really *should* be a printout somewhere of such problems. Maybe Ralph Nader will do that next. 8-)

Thanks and 73 de Bob, N8MMR

I have just returned from a trip to Egypt, Jordan and Syria. I had no problem with my radio (a small Sony FM/MW/SW): the only electronic equipment customs are interested in seems to be video cameras with custom checks being of format:

Do you have a video camera?
No.
Fine, next.

On my way into Jordan, from Syria, I noticed that radios were listed as being restricted but there were no real checks.

Michael.

Well, if you are going to critique the writing of others, it is best to get
your own house in order. Don't make those typos. Be more careful.

Otherwise, you might as well just live and let live.

> I had one idiot on packet jump all over me for typos of a minor

Can anyone suggest a decent method for taking Coax Seal *off* of a connector? It's a mess, and I'm not sure how to do it.

Please email your repsonses...

Thanks --
Eric

Ok, here's one... 147.345 repeater located in Webster, Mass. has been listed as being in "Princeton" since day 1, sometime back in the 70s. The repeater apparently was on Mt.Wachusett in Princeton for a short time on a test basis, but has been located in Webster since then. No one has noticed this in the past 15-20 years?

2092. Offer Extended: QRZ! Ham Radio CDROM: $15.95

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-24 19:46:00 UTC
From: mjohnsto@ditdah.Morse.Net
Message-ID: <1994Feb24.194600.3406@ditdah.Morse.Net>
Source record: 270544

Thanks to all who responded to our last posting several weeks ago, we've decided to extend our offer on the QRZ! Ham Radio CDROM. If you missed it, here you go again:

Morse Telecommunications is pleased to offer Walnut Creek CDROM's *new* QRZ! Ham Radio CDROM for only *$15.95*. This CD normally lists at $29.95 and includes:

* The entire US and Canadian Amateur Radio Callbooks

* Dos/Windows/Unix software to view the callbook

* Hundreds of PC compatible Ham programs

* Radio mods (Hypertext under Windows)

* TCP/IP Software, Packet Radio BBS software, Contest logging

* FCC part 97 rules and regulations, Amateur Radio Exam Question Pools

* USENET Ham Radio archives, ARRL Bulletins

* Soundblaster compatible .wav files for TNC testing

ORDERING

You can place an order by calling or emailing us. We accept Visa/Mastercard American Express. Orders are generally shipped the same day if received by 4PM EST.

You can call us at (800) 706-4046. International customers, please call us at (516) 887-4046. You can also email your orders to us for processing. The address is order@morse.net. Please be sure to indicate the item you wish, your name and shipping address, and credit card information. Be sure not to forget the expiration date. (Lots of folks do, and this delays the order because we can't process without it.)

As I recall, it was a Rand McNally map hich was copied, complete with a
town of "Ladron Texas". Apparently "Ladron" means thief in Spanish, which
was a rather nice touch IMHO. :-)

Whenever I make up a mailing list for a club etc. I usually include myself
under a pseudonym for just that reason too. I have caught some interesting
mis-use of Ham Club membership lists over the years by doing that!

What about a different approach, one worthy of usenet? If there were a newgroup called say, rec.radio.amateur.repeater dedicated to providing assistance and information about repeaters, people would provide info, ask questions, and somewhere, an archive site would accumulate repeater listings. The whole process happens naturally by itself, with no monitary interests involved (and no "leader" to lynch :-).

Well, the ideal thing to do would be to put electrical tape on the connector _BEFORE_ you put the coax seal on, but since that's too late... The hasty option would be to cut the connector off and put on a new one. If you want to save the connector then just get off whatever you can then use the ball of that to get the rest off. I hope that Coax Seal is similar to the tar or roll of really sticky black or beige stuff that most people use. (Also referred to as "Ickum-pucky" (don't ask me)) Otherwise, cut off the connector.

Good luck.

I noticed a marked increase of noise on the AM band and a slight whine on
VHF after it happened on the Citation. The Dodge had some noise increase
on AM broadcast, but none detectable on VHF. I guess it all depends on
the condition of the noise suppresor and the actual alternator model and
problem itself.

Hi All,

Maybe this is not the right place to post this inquiry, but ...

Having searched the better known FTP sites for radio mods, and not finding what I am looking for, is there a site that has mods for Collins gear (any and all models)? I am making this request on the behalf of a non-ham friend.

IF (big if), there are mods for Collins rigs, would you please send them to me directly (unless there are others out there, who would benefit from this request).

BTW, does anybody know if K6ZTI has access to internet? If he does, give him my e-mail address. He should get a big kick out of this.

Thanks in advance,
Lynn Geitgey KB0LRB

Both sides of this question present good arguments, but I have a different slant on it, stemming from something a lawyer once told me.

The saying is: "The law is what you boldly maintain and cautiously defend."

It seems to me that the ARRL is doing some bold maintaining. If someone calls their bluff, they may then have to do some cautious defending, but ONLY if someone calls their bluff.

So from that standpoint also, the ARRL is taking a perfectly reasonable course.

There must be one of the variants of Murphy's law at work here, or
else a dry sense of humour.
"Critique" is a French NOUN. The verb form is "faire la critique de..."
(literally "make the criticism of...."). The English verb is
"Criticise".

Correcting other people's grammar, spelling or punctuation is a
high-risk occupation. Someone will doubtlessly find errors in my
posting, but should they dare post, Murphy will get them too.

Notes of Interest

Penguin Islands, ZS0 and Walvis Bay, ZS9. The government of South Africa has agreed to hand over the thirteen Penguin Islands and Walvis Bay to the Republic of Namibia on 28 February. Look for DJ6JC, DJ6SI and V51BI, using the call ZS0X, 23-28 February from Penguin Islands and ZS6EZ and G3XTT with the call ZS9Z, from Walvis Bay. They will both become part of Namibia beginning 1 March and more than likely be deleted as DXCC countries.

Desecheo, KP5. The planned DXpedition by a group of operators for March 1-7 has been cancelled. Permission to land has been denied because of a group of Haitian squatters. Until this can be resolved, no landing permission can be given.

Revilla Gigedo, XF4. This operation is now and will be on until March 4. Activity on all bands 10 thru 160 including RTTY. QSL Hector, XE1BEF.

Mayotte, FH. Hermann, DJ2BW should be signing FH/DJ2BW for a much needed one in RTTY from 1-9 March. KYFC

For next week's bulletin, send your Bandpass and Notes of Interest to Jules, W2JGR @ W2TKU.#SRQ.FL.USA.NA

Remember, DX Don't Sleep.

2104. Re: Honda ignition recall - now NOISE!!

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-25 13:18:02 UTC
From: kurdzo@gdc.COM
Message-ID: <1994Feb25.131802.28275@gdc.com>
Source record: 270556

baxter@kuhub.cc.ukans.edu wrote:
: This past month, Honda sent out a recall notice for their 90-91 Accords.
: They were wanting to replace a part in the distributor which failed when
: the car got high mileage.

: I had this recall work done on my car a couple of weeks ago, and now have
: terrible ignition noise on 2 meters and 440. Before this work had been
: done, the ignition had been really quite quiet -- now it is nearly
: unbearable.

I am now going through the same thing. 2m is extremely noisy now.
If you find a solution, please let me know.

I am no radio amateur but enjoy listening to world radio. I am looking for software to decode Morse with (DOS). Who can help?

2111. On-line Repeater Directory

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-25 13:57:51 UTC
From: marcbg@netcom.com
Message-ID: <marcbgCLs9GF.GK9@netcom.com>
Source record: 270559
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

Yes, the information in the repeater directory is public information, but the ARRL compiles the information, and puts it into the format that you buy at the stores.

The call-book information is compiled independently by each distributor of the call-book - whether it's in CD format or in hardcopy format - each dirstibuotr either compiles their own from FCC tapes, or buys the rights to the information from another supplier.

I believe that if someone has the ambition to write each repeater coordination group, and independently compile a directory for release to on-line format, then not only would they stnad to possibly profit a little from the sales, but they could also decide for themselves if they want to make this information available on-line.

The key here is that this information, unlike the callboopk info, isnot simply available from any other source outside the ARRL, unless you want to compile the listings yourself.

SO .... it's not like the ARRL is protecting something very sacred, it's just that they have alot of man-hours involved in the repeater directory project, and if there's anyone that can't understand why they don't want to give the information away, well, then, I guess you just don't understand business.

>Anyone have any cures?

Try a 100 watt carbon resister between the positive and
negative terminals of the battery powering the fence. A
large resister, preferably with lot's of cooling fins.

Failing that, judiciously applied diagonal cutters work.

Er.. it _is_ YOUR fence isn't it? :-)

: members in the buff.

We who are members of the Formal Amateur Radio Ham Team (FARHT) know about your group, Julian, and we do not consider you well dressed at all. Here at FARHT, we wear tuxes while operating; during contests we add top hats, tails and gloves. (The top hats add the capacitance necessary to work the really big ones; the tails make a great counterpoise.

I think it is a grand idea also .. information collected this way would be in the public domain and acessible by anyone .. how information collected at the site is used by others is left to individual creativity.

I have an on-line scanner database on my land-line bbs .. the object is scanner buffs can call in and add new listings .. other callers can either earch for specific listings, by state, frequency, city, organization, etc or download a companion program and the database information to use as they see fit on a stand-a-lone pc. No one owns the information placed there and it is for all to share and use. I have had this running for a couple of years now .. There is no reason this would not work for repeater frequencies too.

The ARRL isn't a for-profit organization, and its purpose isn't to make money. They provide many free services, such as the reciprocal operating information, the file server, etc. They also distribute the net directory in electronic form. There may be good reasons for keeping the repeater directory under their control, but "we have to make money off of it" isn't one of them.

Perhaps they're working on their own electronic version?

You all know that I support nude hamfests.
Now who can answer this one?

" Who is the most popular guy at a nude hamfest?"

Answer: (groan
Well... he's the one that can balance two HTs and five roles of number
14 wire.

Gary

>Anyone have any cures?

I've had the same problem with a fence I installed. The noise blanker on my old OMNI C cuts out the noise. I also found that the fence is arcing when I hear the clicks. Sometimes it's a bad insulator or just wet grass on the wire. I walk my fence at night when I can hear the clicks and see the arcing.

Good luck!

To all radio amateurs

SB DX ARL ARLD011
ARLD011 DX news

Items in this week's bulletin are courtesy of Chod, VP2ML; The DX Bulletin; Bob, W5KNE; QRZ DX; the Ohio/Penn DX Bulletin, the Yankee Clipper Contest Club PacketCluster network and Contest Corral in QST. Thanks.

PENGUIN ISLANDS AND WALVIS BAY. ZS0X is now active by Baldur, DJ6SI; Henry, DJ6JC; and V51BI. The most recent PacketCluster spots show much activity between 7004 and 7010 kHz from 0300 to 0500z. There have been some reports that the crew will stay on after the 28th using V5JC, V5SI and V5BI for call signs. QSL CW and SSB operations via DJ6SI. RTTY and OSCAR QSOs, QSL via DJ6JC. ZS9A was worked recently on 14226 kHz at 2015z. Both ZS9 and ZS0 will become territories of Namibia on March 1.

AMERICAN SAMOA. Check 3522 kHz between 1130 and 1200z for KH8/AA6LB. East coast stations running exciter power to average antennas have been able to work this one.

TONGA. Bob, W7TSQ, will be active for about two more weeks as A35SQ. He has been operating free-style around 14225 kHz between 1500 and 1530z. QSL to W7TSQ.

FRENCH POLYNESIA. Dave, WD5N, is operating FO0HAR and will try to operate from the Southern Cook Islands at journey's end. QSL via WD5N.

REVILLA GIGEDO ISLANDS. Hector, XE1BEF, and company are active as XF4C from Clarion Island. This all band, CW/SSB/RTTY effort should run until March 4. Check 3795 kHz at 0415z, 7013 between 0600 and 0730, 14170 at 0200 and 14260 at 0315. QSL via XE1BEF.

GUANTANAMO BAY. Jim, KG4DX; Dave, WQ5Y; and Nellie, XE1CI, are active as KG4CB. Check 14226 kHz around 0215 and 0330z.

CRYSTAL BALL. The following are some operations planned for the not-too-distant future.

BANABA ISLAND. Nils, SM6CAS, and Mats, SM7PKK, will sign T33CS and T33KK from March 27 to April 5.

BENIN. Ken, WA4OBO, expects to be on as TY8OBO for two weeks starting March 1. QSL his home call.

COCOS ISLANDS. OKDXA and Young Gunners DX Foundation members are wrapping up plans for their May DXpedition from Mayos Island. Transportation has been obtained, and landing and operating permission have been granted. This full-scale, multi-national, 12 operator effort will include seven stations, including dedicated satellite and RTTY positions. QSL via OKDXA, Box 88, Wellston OK 74881.

THAILAND. Samui Island, IOTA AS-101, may be activated by a group of Thailand amateurs sometime in March. This island is located off the Malay Peninsula North East group and has not been active for about two years.

THIS WEEKEND ON THE RADIO. Indoor radio-sporting activities for this weekend include these events.

The phone weekend of the CQ World Wide 160-Meter DX Contest runs from 2200z February 25 to 1600z February 27. Exchange signal report and either state, province or DX prefix/country abbreviation. Check page 129 and 130 of December QST for more info.

IARU sister society RSGB's 7 MHz Contest is from 1500z February 26 to 0900z February 27 on CW only between 7000 and 7030 kHz. Exchange RST and serial number. UK stations will also exchange a three letter country code. Details appear on page 128 of January QST.

The French IARU member society sponsors the REF French Contest, phone, running from 0600z February 26 to 1800z February 27. Work French stations, including overseas territories and DA1 and 2 French military stations, on 80 through 10 meters. Exchange signal report and serial number. Page 130 of December QST has more particulars on this event.

The CW weekend of the YL OM Contest runs from 1400z February 26 to 0200z February 28. YLs work OMs and OMs work YLs for a maximum of 24 hours exchanging QSO number, signal report and either state, province or DXCC country. More info can be found on page 127 of January QST.

SYNOPSIS OF ACT

Solar activity was low. Only one C-class flare was
observed during the period. The source was uncertain because
only weak H-alpha emissions in the vicinity of Region 7671
(N10W72) were time coincident with the x-rays. A new H-type
group rotated into view near S15E77 and was assigned SESC
Region number 7678.

Solar activity forecast: solar activity is expected to
be low.

The geomagnetic field was quiet to unsettled.

Geophysical activity forecast: the geomagnetic field is
expected to be quiet to unsettled for the next three days.

Flare event probabilities 25 feb-27 feb

Class M 05/05/05
Class X 01/01/01
Proton 01/01/01
PCAF Green

HF propagation conditions finally returned to normal over
all regions today. Near-normal conditions are expected to
persist over the next 72 hours, through 27 February inclusive.

EVENTS WIT

Date Begin Max End Xray Op Region Locn Sweeps/Optical Observations
------ ---- ---- ---- ---- -- ------ ------ ---
NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

>wavelengths/higher frequencies.
>
> Signals appear to drop because the aperture of the antenna "catching"
>it is getting smaller compared to the total illuminated area at 1/D^2.
>This is exactly why shorter paths and shorter wavelengths are better.

Free space loss is, as you noted, due to the geometry of the situation,
and is not a dissipative loss. The following equations can be used.

Lfs = 32.45 + 20*log(d) + 20*log(f)

for d in kilometers and f in MHz. Or

Lfs = 37 + 20*log(d) + 20*log(f)

for d in miles and f still in MHz.

Both equations assume isotropic radiators. Antenna gains must be
included in total path budget calculations.

There are other losses. Loss from atmospheric gases is figured by

Lo = Ko*d

where d is in kilometers and Ko varies with frequency. It's negligble
below 10 GHz, but peaks at nearly 20 db per km by 47 GHz. There are
charts of Ko versus frequency in most microwave handbooks. This is
a true dissipative loss, but is of little serious concern to most
amateurs.

There is also loss due to water vapor in the air. This is also of
importance mainly above 10 GHz, but has a peak in our 24 GHz band.
The equation is

Lw = H*Kw*d

Where H is abolute humidity in g/m^3, d is distance in km, and Kw is
from a table of attenuation values. At 24 GHz, Kw is .24 db/km. This

is a true dissipative loss. Rain and fog losses are similar to water
vapor losses, only much greater, and effective starting at lower
frequencies. At 10 GHz, loss in a 1 inch per hour rainstorm will be
1 db per km, at 24 GHz, the loss would be 3 db per km.

Lr = Kr*d

So for LOS paths, total propagation losses are

Lt = Lfs + Lo + Lw + Lr

>> I think that my point here is that LOS paths aren't practical for most
>> amateur data links. The ability to get LOS paths is very terrain specific,
>> and very $$$ specific. They either require fortuitous high sites, or
>> very expensive microwave towers.

>countryside) goes into removing the channel from reuse by other links
>(QRM). We need to be finding ways to use *less* power, not more, and
>not just because of the FCC mandate either.

Well lets look at the equations again. For troposcatter the loss
equation is

Ls = 21 + 10*As + 10*log(f) + Lc

As is the scattering angle in degrees, f is frequency in MHz, and
Lc is aperture to medium coupling loss in db. As can be calculated
by

As = 0.005*d + (A1 + A2)

Where d is km and A1 and A2 are the elevation angles of the two antennas.
As can be seen, the lowest elevation where a common volume of air is
visible to the two stations gives the lowest loss.

Lc can be calculated by

Lc = 2 + 2*As/sqrt(a1 + a2)

Where As is as above, and a1 and a2 are the 3 db beamwidths of the two
stations. That can be calculated as

a = sqrt(1/(10^G/10)

where G is the antenna gain in dbi. From these two it becomes obvious
that scattering losses decline with wider beamwidths that encompass
a larger common volume of air. Note the tradeoff, however, in that a
wider beamwidth implies a lower antenna gain. This has to be balanced
in the total link budget. Note also that scattering losses don't inrease
as rapidly with increasing frequency as do free space losses. Scattering
is particularly valuable where power is easy to generate and moderate gain
antennas are used.

Another common technique for dealing with non-LOS paths is to make
use of knife edge diffraction over an intervening obstacle. Knife
edge losses can be calculated by

Lk = 20*log(h*sqrt(f/d1) - 38.8

where h is the elevation in meters relative to a free space path of
the knife edge obstruction, f is frequency in MHz, and d1 is the
distance from the near station to the obstacle. Note from inspection
that lower frequencies work best here.

There are more effects. Fresnel zone losses are a concern with paths
near the surface, and thermal inversions can royally screw microwave
paths by bending the path away from the intended receiver. There's also
near field absorption by trees, buildings, etc. This rapidly becomes
a major factor above 450 MHz, with losses climbing to 2 db per *meter*
of foliage at 10 GHz.

Put this all together and it spells mother******, at microwave. :-)
At 430 MHz, it all becomes much easier. Forward scatter and knife
edge diffraction are both common methods of extending range beyond
LOS at 430 MHz. It's much more costly at 10 GHz.

> I guess I'm changing my mind about what "build it and they will come"

Currently byugate.cs.byu.edu is not reachable (due to a little conflict with our local network security people). However, I will temporarily put this file on physc1.byu.edu in directory hamradio for anonymous ftp. Hope this helps (we hope to have byugate back in normal operation soon but still have some problems to solve to keep the security people happy).

What are you talking about? ftp.std.com works fine for me.
Their logon message is related to charges for accounts directly on
their system. Their anonymous ftp access still appears to be open
and free.

Waitaminnit, I didn't see anything in Mr. Ehrlich's message about
"charg[ing] us internetters for accessing their system!" Did you read
a different message than the one I saw? It looked to me like he was
telling you about an anonymous FTP site on the Internet, namely
ftp.std.com. He was nice enough to tell you the exact pathname to
some ham files of interest. And for this, you bite his head off in a
netnews post? I didn't see anything about charging anyone money, as
if that were feasible through anonymous FTP. You really must have
seen a different message than the one I saw, or else you know
something that I don't know from reading the posts here.

2128. ICOM 2SRA mod filename?

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-25 15:55:16 UTC
From: hlb@li.loral.com
Message-ID: <hlb.762191716@loral>
Source record: 270570

Does anyone know the filename for the ICOM 2SRA mod on ftp.std.com?
AS I do not have direct ftp access I can only go thru a mail server.
However, trying to get a list (ls) of the ICOM directory yielded an
out of memory error. Looks like I need the exact filename.

Thanks,
hlb@li.loral.com

My first question regarding this mess is:
Did you try to reconcile these problems with the league directly before
taking it to a public forum? If not I consider starting a derogatory
thread regarding the way the league has "handled" this very poor
etiquette. Imagine how everyone would have jumped all over those posting
to the recent Ramsey thread if they had not tried to contact and resolve
the problem with JOhn personally.

Tom Bruhns (tomb@lsid.hp.com) wrote:
: I'd be willing to post my submission to Conway, with all the info that
: hasn't been independently verified deleted. Any interest?
Since it has been generally agreed that if you are taking the information
directly out of the directory without permission and re-publishing it it
is a copyright infringement and you are stating that you have not
verified some of the data you submitted to Conway can we assume you gathered
these data from the ARRL directory?

I don't see how the FTP site would be vulnerable unless it was suggested somewhere that people just transcribe a piece of copyrighted material.
I will be happy to begin the posts with the local machines I use.
I don't know if there is really a need to start a new newsgroup. We could just use a subject line begining with REPEATERS: or something. One suggestion would be to break up the inforamtion in a different geographic format. I really don't like trying to find a UHF repeater in So. Cal. with the ARRL directory. This project could be much more accurate than the ARRL directory because they only publish what they are given. If a repeater owner wants to see his name in the book they can publish incorrect PL's and increase the difficulty in accessing the machine. The database could also be updated. Perhaps even a comment area for bringing up public autopatches etc.

: in electronic form. There may be good reasons for keeping the repeater
: directory under their control, but "we have to make money off of it" isn't
: one of them.
At $30 my dues don't pay all the $$ for the free services you are talking
about there. Where do you suppose it comes from? It comes from those
areas of the business that do make money for the league. There are some
things the league that cost them money, there are some things the league
does that they make money on. These things balance out, hopefully. You
can't expect each transaction the league makes to be a wash

: Perhaps they're working on their own electronic version?
I hope so! But I'll bet if we get together and pout our own out it would
be atleast as good, probably better.

Looks like a bug, all right. You should probably report this to their system maintainers. I don't know what login name they use for catching their system-related mail; in the absence of further information, something like postmaster@world.std.com would probably be the best bet.

Take another look at a couple of lines in the login message:

> 230-at $5/mo+$2/hr or $20/20hrs/month, your choice. Grab the details in
> 230-the world-info directory here if interested.

If anonymous FTP doesn't work without paying, then how are you supposed to grab the details if you think you might want to get an account? It would be counter-productive for them to turn off anonymous FTP. Oh, and isn't ftp.std.com also the FTP site for the ARRL's ham info files?

I had the same problem with an earlier version of SM. I suspect it
happens because Windows is "time slicing," and that screws up SM's
timing. Did you try making SM operate "exclusively," i.e., where all
other programs are stopped? To do this, you would modify the PIF you are
using for SM. I can't remember if I tried this or not. [I used SM
to help pass my Extra a year ago, so I haven't needed it in a
while :-)].

2135. My List of Mail Order Electronics Companies

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-25 16:44:07 UTC
From: jfw@ksr.com
Message-ID: <2kl9sn$opl@hopscotch.ksr.com>
Source record: 270448
Cross-posted to: sci.electronics,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.info

A real prompt update for once; check the end for the changes (as usual).

[$Revision: 2.16 $; last updated Feb 25, 1994]

Here is my list of companies which will sell electronic components in
small quantities. Most of these places I have bought from, a couple
I haven't. Being a ham radio operator, I am most interested in
RF components, and in particular, air variable capacitors, which tend to be
scarce (and tend to be used or surplus even if I've otherwise labelled the
seller as "NEW"). I apologize in advance for disparaging remarks about
what happens when parts suppliers start selling computers, but anyone who
has watched Jameco over the years will know just what I mean (though
their latest catalog hints at possibly returning to selling parts).

Categories are:
NEW COMPONENTS Distributors and sellers of new components, or "new and some
used" in a couple of cases.
SURPLUS ELECTRONICS Usually overstocks, occasionally used equipment.
Ideal for stocking the junkbox, usually have dependable stock lines
of resistors, capacitors, and some semiconductors, but won't have
those LCD modules forever... An invaluable resource, don't shy away
from them.
SPECIALTY COMPONENTS In particular, crystals and toroidal cores.
KITS Ham radio kits, random electronic kits, whatever they have.
LITTLE GUYS Separated out because of some twisted sentimentality,
I suppose. Intended to honor one or two ham spare-bedroom
operations. Note that sending $1 along with catalog requests
is a big help for these folks.
PUBLICATIONS Two publications which are essentially all want-ads, plus
the address for SAMS PHOTOFACTS because everyone always asks about
it on sci.electronics.

Note on shipping costs: I don't always update these frequently enough, and
they're generally for continental US unless otherwise mentioned.

NEW COMPONENTS:

Ocean State Electronics
P.O. Box 1458
Westerly RI 02891
+1-800-866-6626 (orders)
+1-401-596-3080
+1-401-596-3590 (FAX)
Minimum $5, S&H $4, free catalog. Wide array of RF parts, especially
air variables and B&W coils.

Radiokit (store is located at:)
P.O.Box 973 169 Jeremy Hill Rd.
Pelham NH 03076 Pelham NH 03076
+1-603-635-2235
+1-603-635-2943 (FAX)
No minimum ($3 service charge if under $20), many kits, lots of J. W. Miller chokes & coils, B&W coils, RF switches, Millen variable capacitors, lots of parts in general. As of 24-Feb-94, they are again STILL out of catalogs, and just barely might have one by Dayton this year. They do accept mail orders, but you'll have to call for prices and availability. A classified ad in 3/94 QST says "Call/SASE", I guess they may have fliers.

Circuit Specialists Inc
P. O. Box 3047
Scottsdale AZ 85271-3047
+1-800-528-1417
No minimum with check or money order, $15 otherwise. $3 S&H.
New electronics, good RF assortment, increasing infestation of computers.

Mouser Electronics Mouser Electronics Mouser Electronics
11433 Woodside Ave. 2401 Highway 287 North 12 Emery Ave.
Santee CA 92071 Mansfield TX 76063 Randolf NJ 07869
Mouser Electronics
370 Tomkins Court
Gilroy CA 95020
Catalog Subscriptions: (800) 992-9943 (Continental US only)
Sales & Service: (800) 34-MOUSER (800-346-6873) (US, Puerto R., Canada)
Very complete catalog of brand-new components (though no air variables). Usually quick service, $20 "minimum" ($5 charge under $20). When ordering, you may want to be sure to ask about availability and shipping locations; they have several warehouses, and frequently orders will get sent from several warehouses (which drives up the shipping costs). Export orders have a $100 minimum, except for Canada and Mexico.

Digi-Key
701 Brooks Ave. South
P.O.Box 677
Thief River Falls, MN 56701-0677
+1-800-DIGI-KEY (334-4539)
+1-218-681-3380 (FAX)
No minimum, $5 handling under $25, free and very complete catalog, very nice indeed. Prices aren't always the best, but rarely excessive. Weak on RF specialty parts (though they now have the ever-popular NE602N), but they do have blue LEDs.

Active Electronics
11 Cummings Park 237 Hymus Blvd
Woburn MA 01801 Pointe Claire, Quebec, H9R 5C7
+1-800-677-8899 (Main number for US and Canada)
+1-514-630-7410 (International)
+1-514-697-8112 (FAX)
$25 minimum, $5 S&H UPS, catalog has a "$10 Suggested retail price" but they

sent mine for free. They have 8 stores in the US (Santa Clara CA; Chicago IL; Baltimore MD; Woburn MA; Detroit MI; Mt. Laurel NJ; Long Island NY; Seattle WA) and 10 stores in Canada (Quebec City; Montreal (2); Ottawa; Mississuaga; Winnipeg; Calgary; Toronto; Edmonton; Vancouver BC). Each store has its own 800 number and FAX number, call the main number(s). International orders are to be mailed to the Canadian address, but they want payment in US funds! Lots of stuff, oriented more toward supplying last-minute requirements of companies than hobbyists, but perfectly happy to take your money in small doses (stores have no minimum order). The $25 minimum for certain items is no longer explicit, but they note that some items will "ship in factory minimum package quantities", which might be worse.

Maplin Electronics Ltd.,
P.O. Box 3,
Rayleigh,
Essex,
SS6 8LR
U.K.
Phone numbers: your international code +44 702 554161 for sales
+44 702 553935 Fax
+44 702 556001 Tech enquiries(2-4pmGMT)
"Over here [in the United Kingdom] the main hobbyist electronics supplier is Maplin Electronics who stock a wide variety of equipment. They have a catalogue which can be shipped for 10.65 pounds sterling by air or 5.50 pounds sterling by surface mail. They accept Mastercard, American Express and International Reply Coupons. They have at least one type of air-filled variable capacitor!" (Thanks to Kev White at Cambridge University).

Newark Electronics
Send catalog requests to:
Newark Electronics
ATTENTION CATALOG DEPARTMENT
4801 N. Ravenswood Ave.
Chicago IL 60640-4496
+1-312-784-5100
They don't have a single mail address or phone; instead, one is supposed to call the closest of three pages worth of branch offices. I don't feel like typing in the entire list (it's copyrighted, anyway :-), so send email for your "local" distributor, or call their administrative offices at the number above. They have a $25 minimum order; they are a Real Distributor, but accept small orders (over the minimum, of course). Their catalog currently 1248 pages; they are very complete (except, of course, for my favorite scarce item, the air-variable capacitor). Note that the catalog prices tend not to match reality all that often, so order by phone rather than by mail; prices tend to be higher than other places, but they have a lot of things that are hard to find from other outlets. Also note that they have six Canadian offices, and one UK office, and will take international orders at 500 N. Pulaski St., Chicago IL 60624-1019, +1-312-784-5100
(FAX +1-312-638-7652, TLX 6718690 NEWARK U).

Arrow Electronics, Inc. Catalog requests to:
Catalog Division Catalog Division
1860 Smithtown Ave. 25 Hub Drive
Ronkonkoma NY 11779 Melville NY 11747-9828
+1-800-93-ARROW
Minimum $25; they no longer have a catalog. They are a Real Distributor, but also didn't mind my placing a personal order (a couple of years ago).

MCM Electronics
650 Congress Park Drive
Centerville OH 45459-4072
+1-800-543-4330
+1-800-824-TECH (product questions)
+1-513-434-6959 (FAX)
Minimum $20 ($25 for charge cards, and they don't take personal checks), handling $1.95 + shipping. Oriented toward repair technicians, really heavy on VCR parts and somewhat overpriced doodads, lots of useful stuff not easily found elsewhere.

Fordham Radio Supply
260 Motor Parkway
Hauppauge NY 11788-5134
+1-800-695-4848
Tools for technicians. One or two items are not outrageously overpriced.

Jameco
1355 Shoreway Road
Belmost CA 94002
+1-800-831-4242
+1-800-237-6948 (FAX)
+1-415-592-8097
$30 minimum order (was $50), >$5 shipping & handling. Their most recent catalog may have reversed a long trend of abandoning parts in favor of PC compatibles, or it may not; one can always hope.

JDR Microdevices
2233 Samaritan Drive
San Jose CA 95124
Orders: +1-800-538-5000
+1-408-559-1200
FAX: +1-800-538-5005
+1-408-559-0250
Cust. Service: +1-800-538-5001
Tech Support: +1-800-538-5002
BBS: +1-408-559-0253

No minimum, $5+ shipping. Mostly computers now, but they haven't yet decided to abandon components; indeed, they recently dropped their minimum order requirement entirely.

Johnson Shop Products
P.O.Box 160113
Cupertino CA 95016

+1-408-257-8614
+1-408-253-6288 (FAX)
Catalog $1. No minimum. Shipping charge is based on UPS; very small orders that can be sensibly shipped in a first-class letter, include money for first-class postage. New and some used electronic parts.

DC Electronics
P. O. Box 3203
Scottsdale AZ 85271-3203
+1-800-423-0070 (orders)
+1-602-945-7736 (stock/price checks)
+1-602-994-1707 (FAX)
$15 minimum charge order, no minimum for checks, $3 min. shipping&handling. Wide array of ICs, good assortment of electronic components.

EasyTech Inc *** out of business? ***
2917 Bayview Drive
Fremont CA 94538-9932
11 May 93: "EasyTech no longer has an 800 number, and has dropped several lines. The last time I called them (2 months ago), I got the impression they were slowly going down the tubes..." - dts@banyan.com "Both of their 800 number and the customer services numbers are disconnected, and no new numbers are given." - lau@gandalf.rutgers.edu

International Components Corporation
1803 NW Lincoln Way
Toledo OR 97391-1014
+1-800-325-0101 (US & Canada)
+1-503-336-4400 (FAX)
Cabinets&Enclosures; Capacitors; Diodes; ICs; Potentiometers; Resistors; Sockets; Transistors; Books. No minimum order, $2 handling under $25.

Kelvin Electronics
7 Fairchild Ave.
Plainview NY 11803
+1-800-645-9212
+1-516-349-7620
+1-516-349-7830 (FAX)
Minimum order $20; S&H 5% of order ($5 minimum, extra for large stuff, overnight, export (like to Hawaii :-), and etchant; based on UPS charges). Lots of electronic parts & tools, some robotics supplies, model rockets.

H & R Company (Herbach and Rademan)
18 Canal Street, P.O.Box 122
Bristol PA 19007-0122
+1-800-848-8001 (Orders)
+1-215-788-5583
+1-215-788-9577 (FAX)
Minimum order $25 ($5 processing charge under $25), shipping $4.75 under $30; Most items are new overstocks, much regularly stocked stuff as well. Tools, electrical supplies, motors, mechanical components, robotic components.

SURPLUS ELECTRONICS:

All Electronics Corp.
P. O. Box 567
Van Nuys CA 91408-0567
+1-800-826-5432
+1-818-904-0524
+1-828-781-2653 (FAX)
$10 minimum, $4.00 S&H. New and surplus electronics.

Alltronics
2300 Zanker Road
San Jose CA 95131
+1-408-943-9773
+1-408-943-9776 FAX
Surplus electronics. $12 minimum, shipping per UPS.

American Science and Surplus (formerly JerryCo)
P.O. Box 48838
Niles IL 60714-0838 ### New address.
+1-708-475-8440
+1-708-864-1589 FAX
Surplus. *The* surplus place. Lots and lots of surplus. WWII gun cameras,
velcro, laser disk chassis, 6 volt VW wipers motors, LEDs, rubber brains,
you name it, they've had it. Catalogs are a really good time.
$12.50 minimum order (which includes the $4 shipping charge).

BCD Electro ### Out of the mail order business!
P. O. Box 450207
Garland TX 75045-0207
+1-214-343-1770
According to Barrie Britton (24 Feb 94), BCD has gone out of the mail order
business.

Fair Radio Sales
P. O. Box 1105
1016 E Eureka St.
Lima OH 45802
+1-419-227-6573
Surplus electronics. Heavy on parts for old Collins gear.

Hosfelt Electronics
2700 Sunset Blvd.
Steubenville OH 43952
+1-800-524-6464
+1-614-264-5414 (FAX)
No minimum, $3.75 S&H. Surplus electronics.

HSC Electronic Supply (Halted Specialties Co.)
3500 Ryder Street
Santa Clara, CA 95051
+1-800-4-HALTED Orders only
+1-408-732-1573 inside California and outside US

Surplus (new) electronics; new and used test equipment. Minimum order $10
($2 handling charge under $20), plus UPS shipping cost. Has three stores,
of which 3500 Ryder Street is one.

Marlin P. Jones & Assoc.
P.O. Box 12685
Lake Park FL 33403-0685

No minimum ($1 fee for under $10), shipping per UPS. Surplus electronics.

R&D Electronics
1224 Prospect Ave.
Cleveland OH 44115
orders: +1-800-642-1123 (tues - fri 9am-4pm sat. 9am-3pm EST)
info: +1-216-621-1121
fax: +1-216-621-8628
$10 minimum. Surplus electronics.
"Also known to stock many components, but this is not discussed in the catalog.
Local store, a cleveland institution, is called Electronic Surplus, Inc., and
has been there since '48. Third generation now runs it." -- wb8foz

Surplus Sales of Nebraska
1502 Jones Street
Omaha, Nebraska 68102
+1-402-346-4750
+1-402-346-2939 (FAX)
New and surplus radio electronics. Wide selection: air variables.
Catalog $3 (free with order, refundable with $25 catalog purchase).

Tucker Surplus Store
1717 Reserve St.
Garland TX 75042
+1-800-527-4642 extension 135
Surplus electronic gear; oscilloscopes and signal generators from the days
when dinosaurs with vacuum tubes roamed the earth (some solid state gear, but
all well used). Prices seem relatively high, and you'll be shocked to learn
how much it costs to ship a 75 pound oscilloscope by motor freight...
[Steve Brown, N8HFI:
In defense of Tucker, the have a broad selection, repair facilities, and
they certify the used equipment to meet the original specification and
warranty it for 90 days. Not every source does this:]

Davilyn Corp.
13406 Saticoy St.
North Hollywood, CA 91605-3475
+1-800-235-6222 (Ex. CA)
+1-818-787-3334 (CA)
+1-818-787-4732 (FAX)
Surplus electronic gear.
[has much better prices [than Tucker], but sells used equipment as-is. -N8HFI]

SPECIALTY COMPONENTS:

JAN Crystals
2341 Crystal Drive
P.O. Box 06017
Fort Myers FL 33906-6017
+1-800-JAN-XTAL (Monday through Thursday)
+1-813-936-3750 (FAX)
+1-813-936-2397 (plant)
They make crystals. Minimum order is $10, which might be one crystal, or might be two.

Crystek Corporation
2351/2371 Crystal Drive
P.O. Box 06135
Fort Myers FL 33906-6135
+1-800-237-3061 (M-F) (US and Canada but not Alaska and Hawaii)
+1-813-936-2109
+1-813-939-4226 (FAX)
They make crystals too. They were the cheapest last time I ordered, but I don't have an up-to-date price list. It took about 4 weeks, and they had said it would take 6.

ICM (International Crystal Manufacturing Co., Inc.)
701 W. Sheridan
PO Box 26330
Oklahoma City OK 73126-0330
+1-800-426-9825
More crystals. They were more expensive, but they have lots of pre-made crystals for various rigs, so they would probably be faster.

Amidon Associates
2216 East Gladwick Street
Dominiguez Hills, CA 90220
+1-213-763-5770
+1-213-763-2250 (FAX)
Toroid cores and related things. Very fast service. Now takes MC/Visa and phone orders.

Palomar Engineers
Box 455
Escondido CA 92033
+1-619-747-3343
Toroid cores and shielding beads.

RF PARTS
435 South Pacific Street
San Marcos CA 92069
+1-800-RF-PARTS (Orders only)
+1-619-744-0700 (main order line & delivery info)
+1-619-744-0750 (customer service, warranty, tech & applications, 10AM-4PM)
+1-619-744-1943 (FAX)
Tubes and transistors. $2 handling below $20 for US orders; $5.50 minimum

handling for Canada orders; they take foreign orders (but no handling info was given in the QST ad).

K2AW's Silicon Alley
175 Friends Lane
Westbury NY 11590
+1-516-334-7024
Free catalog, $10 minimum order. Semiconductors, in particular high-voltage diodes.

Small Parts, Inc. [New address and phone, 23 Dec 91]
13980 NW 58th Court
P.O. Box 4650
Miami Lakes, FL 33014-0650

Huh? Excuse me, just because a group is listed as non-profit that doesn't
mean that they have to operate at a loss on everything. The non-profit
aspect only applies to how they are taxed.

Well if computers can check grammar these days, they could probably do
a pretty good job of picking out posts that are business oriented. The
problem here probably is that they would reject many posts that were
not really business oriented in the process due to similarity of language
constructs. However this does not seem to be too high of a price to pay.
^^^^^^^^^^^^^^^^^^^^^^
(Oops! This message probably wouldn't make it
through. ;^)

Identifying obscene material might be a little more difficult than
simply filtering bad language.

Perhaps a newsgroup that was monitored could be linked to a packet
repeater? The group monitor could be the control operator for the
first repeater for that matter?

But the recent Supreme Court decision (telephone white pages) specifically
rejected the notion that time, money, effort constituted a valid reason
to be protected by copyright (for factual data that is). The court
said that the overall presentation of the data had to constitute a
"creative" presentation. Even if the ARRL directory has a valid
copyright protection, that copyright would (IMHO) only protect the
overall presentation of the data as it appears in the directory today...
that is it being arranged bu band, state, area. The copyright would
not (again IMHO) protect any individual details (the factual aspects
of a repeater...callsign, frequency in/out, location, etc.)

I agree with others that have said ARRL should not be opposed to an
online version, regardless of where the source data comes from. I
feel that way because I see little threat to ARRL Directory sales
from an online capability because the ARRL Directory is targeted
towards mobile use (store in the glovebox) as opposed to an online
directory which can provide sorted outputs to help coordination,
etc. I sure wouldn't want a bunch of 8.5x11 paper sheets of
repeater listings in my car's glovebox....would you?

Again, as an ARRL member, I strongly support the league's overall
goals, but I disagree with them on this issue. ARRL should be
encouraging such on-line capability, indeed the online capability
would be even better if I could send a packet request for info
and then have an autoreply sent back with the data I requested.
That'd be a great way to expand interest in packet.

Cheers,

2141. Further criminalization of scanning

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-25 18:03:11 UTC
From: grady@netcom.com
Message-ID: <gradyCLsKtB.I3r@netcom.com>
Source record: 270481
Cross-posted to: rec.radio.scanner,rec.radio.amateur.misc

The FBI just announced their new wiretap bill for 1994.

Among its many provisions, monitoring cordless phone
will be criminalized, just like cellular is now.

Presumably the FCC will have to act to ban all scanners
that can tune the 46.xx range... I might suggest you buy those
continuous range scanners NOW before while they still are
permitted to US Citizens.

My third Pro2006 just arrived, as did my fourth ICOM W2A HT.

For more details of the Draft Bill and analysis by Attorney Mike
Godwin of the Electronic Frontier Foundation, check into
comp.org.eff.news and comp.org.eff.talk or send e-mail to
mech@eff.org.

The EFF will be fighting this bill as hard as it can; you
too can join the battle with us...

2142. Re: A transmission line loss question

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-25 18:51:25 UTC
From: tomb@lsid.hp.com
Message-ID: <CLsn1p.B7v@hpcvsnz.cv.hp.com>
Source record: 270482

About a week ago, I posted:

: I have a perverse question about feeding an antenna with a coaxial
: transmission line. This is intended as food for thought. (You've
: been warned ;-)

: Assume you have a 50 ohm antenna you want to use on a single
: frequency in the two meter band. You will be feeding it with
: about 100 feet of coax, which will be cut to an exact integer
: multiple number of half-wavelengths on the operating frequency.
: Which of the following two transmission lines will you choose
: to give lower loss?

: A. 50 ohm air-insulated copper line with 1" OD

: B. 75 ohm air-insulated copper line with 1" OD -- in other
: words, same line as in (A), but a smaller center conductor.

OK, I guess it's time for me to post my solution. First the direct answer, then some explanation.

The 75 ohm line is actually slightly lower loss. This came as a surprise to me when I worked through the calcs, which of course is why I posted the question.

Some practical thoughts:

Though the line is said to be an integral number of half-waves, the feedpoint impedance will not be exactly 50 ohms, because of loss in the line; we should make sure the feedpoint SWR isn't too high. Calcs below show this is probably OK.

Will environmental considerations make this idea impractical? Well, three things I can think of are temperature, humidity and atmospheric pressure. A change in any of these can cause a change in the electrical length of the line and change the SWR seen by the source as a result. My calcs (below) indicate none of these is a problem. Ideally, you would control the humidity in the line, but temperature and pressure probably wouldn't be controlled in a ham application.

Is there a better way? Yes, likely you can get lower loss if you can tolerate the space you need to leave around an open-wire line. A 200 ohm line with 1:4 baluns at each end could work quite well; it would operate at a 1:1 SWR and could be quite low loss if built from, say, 12 gauge or larger wire. 450 ohm line and 9:1 baluns could be an even bigger win. I'll leave the calcs on this to others; they should be straightforward since the SWR would be nominally 1:1.

However, coax is usually easier to install, and the 75 ohm stuff may
be available quite cheap from a cable TV company.

Calcs:

Assumed inner diameter of outer conductor: .875"
Zo=60ln(D/d) where D is outer diameter, d is inner diameter...
so for 50 ohm line, inner conductor is .3802"
For 75 ohm line, inner conductor is .2507"
dB atten for 100 feet of copper coax, perfect surface conditions,
is
A100=.434*(1/d+1/D)*sqrt(f)/Zo
where
d, D are inner and outer diameters in inches
f is freq in MHz
Zo is line impedance
Matched line loss at 146MHz for 100 feet of line is:

50 ohm line: .396dB
75 ohm line: .359dB

(These losses are about 0.1dB lower than the "book" values I
have; but the calcs assume perfect condutor surfaces and no loss
at all caused by dielectrics (supports).)

From a nomograph for additional loss for mismatched load, 1.5:1 SWR:
with .36dB matched loss, around .02dB -- nomograph becomes hard to
read for this case!

Result is that the 75 ohm line is very slightly less loss.

Alternate calc:
nmax = 10^(-Ao/10)

n = nmax * (1 - rho^2)/(1 - rho^2*nmax^2)

where
n = line efficiency (as a simple ratio to 1)
nmax = matched line efficiency
Ao = matched line loss
rho = magnitude of reflection coefficient (.2 for this case)

For the 75 ohm line feeding 50 ohm load, this leads to
nmax = .9207
n = .91767
A = .3732dB = loss in 75 ohm line feeding 50 ohm load

so the loss in the 1.5:1 SWR 75 ohm line is less than the loss in
the matched 50 ohm line.

Yet another alternate calc: see Al Bloom's posting. An
approximate expression for the current along the line is, as

Al notes, 5/6+1/6*cos(x) where x is a measure of distance
along the line. With uniform resistance of the conductors,
this leads to an average loss: find the square root of the
squared current averaged along the length of the line.
The result is sqrt(average(25/36 + 10/36*cos(x) + 1/36*(1/2+1/2*sin(2x))))
for the assumed 1 amp load current. This calcs out to sqrt(51/72)
or .8416 amps, not the .951 amps Al got (simple math error??),
which works out to .963 times the loss in the matched 50 ohm line.
This compares favorably with .944 times, as figured from the
373dB vs .396dB losses calculated above. Both methods have
some errors built in. (BTW, I really liked Al's approach to this
"quiz question": it was very general and shows that the result is
nearly independent of the diameter of the coax.)

Feedpoint impedance calcs (there are other equivalent ways to
look at this, of course):
rhodB at input = rhodB at load + 2*Ao
rhodB = mag of reflection coefficient, expressed in dB
= 20 log (1/rho)
SWR = (1+rho)/(1-rho)
which lead to SWR at input of about 1.45:1 _relative_to_75_ohms_.
This translates to 51.67 ohms or about 1.034:1 SWR. This should
be acceptable, but could be fine-tuned if needed with a simple
matching network.

Environmental considerations:

Pressure and temperature changes in dielectric constant: these
are in the vicinity of 1ppm/C and 1ppm/millibar; this is small
compared with the line length change with temperature and
therefore won't be considered further.

Dielectric constant change with humidity: didn't find any good
info on this; if it is significant, keep the gas in the line
dry...

Line length change with temperature: Linear coefficient of
expansion of copper = .0000171/C. Assume 25C nominal, -15C
minimum and +65C max. This +/-40C range should cover most
applications. It corresponds to about -2F to 149F. The line
can be put in a sheltered spot to keep it out of direct exposure
to the sun, likely a good idea anyway if it has a plastic jacket.
So the nominal 1200 inch length will change by about +/-.82
inches over the +/-40C temperature change. The wavelength at
146MHz is just over 2 meters, so .82 inches corresponds to .010
wavelengths. Using a Smith chart normalized to 75 ohms, we can
see this corresponds to 75*(.689 +/-j .04), or 51.67 +/- j3 ohms.
The SWR could reach about 1.07:1. I think most folk would be

happy with this SWR, but the reactive part could be tuned out trivially with a small variable cap with a knob calibrated in temperature.

* HF PBBS UPDATE *
==================
```

The WT0N-3 HF Packet Radio BBS in St. Paul, MN on 10.127 MHz now also supports PACTOR communications under the callsign of WT0N. The BBS is available for packet operations Monday through Saturday from 1600 UTC until 2300 UTC. PACTOR operations are currently scheduled during the hours of 23:30 UTC and 04:00 UTC. The system carries all AMSAT bulletins and Keplerian data for OSCAR satellites. It also carries other satellite related items such as "SpaceNews".

The BBS is currently set up as an experiment. Comments and suggestions should be directed to the sysop, BJ Arts at any one of the following addresses:

* OSCAR TALK AT BERKELEY *
==========
On Thursday, March 3rd, at 7:30 PM, Professor Robert Twiggs of Stanford's newly formed small satellite department will be giving a talk about their amateur radio based satellite program. Professor Twiggs's extensive background in amateur satellites at Weber State University included OSCAR WO-18 and NUSAT I. His positive experience with including OSCAR activities in the education curriculum has led him to establish a program at Stanford. He hopes to get faculty, staff, students and local volunteer engineers to work together in a similar manner as was done at WSU to design, build, launch and operate microsatellites at Stanford. Professor Twiggs will be discussing possible payloads for Stanford's amateur satellites and science payloads for the larger buses that they would like to build.

The talk will be held in downtown Berkeley, CA at UCB's Center for EUV Astrophysics, 2150 Kittredge Street. The CEA is between Shattuck and Oxford Streets, diagonally across from the California Cinema.

A tour of the CEA, including the Science Operations Center for NASA's Extreme Ultraviolet Explorer satellite (EUVE), will be available for those arriving at 7:00 PM.

Will Marchant Center for Extreme Ultraviolet Astrophysics
marchant@cea.berkeley.edu University of California
KC6ROL@N0ARY 2150 Kittredge St., Berkeley, CA 94720 USA

* FO-20 SCHEDULE *
==========
The FO-20 command station announced that a slight malfunction in the onboard command system had been detected. As a result, analog mode operation arranged from 09-Feb-94 will be performed on schedule, but there is a possibility of interruption due to satellite ground station control.

The present schedule is as announced before:

Analog mode:
09-Feb-94 07:15 -to- 16-Feb-94 07:40 UTC
23-Feb-94 08:05 -to- 02-Mar-94 06:40 UTC
09-Mar-94 07:05 -to- 16-Mar-94 07:30 UTC
23-Mar-94 07:52 -to- 30-Mar-94 08:15 UTC

Digital mode: Unless otherwise noted above.

[Info via Kazu Sakamoto, JJ1WTK]

* SpaceNews VIA SATELLITE *
==========
SpaceNews distribution via the Amateur Packet Radio Network has been improved recently with the help of high-speed "Pacsat" satellites. These polar orbiting satellites now make SpaceNews available to every inch of the planet several times daily at 9600 bps. My sincere thanks to W3QNS for uploading copies of SpaceNews to the KITSAT OSCAR-23 satellite and making them available for all KO-23 satellite users.

* CONGRATULATIONS! *
==========
Congratulations to Jeff Ward, G0/K8KA, who recently earned his Doctorate degree. Jeff has been instrumental in the design of not only OSCAR satellite hardware, but also the ground station software that is used for Pacsat communications. His work has had a great impact on emerging microsatellite and digital communications technology, and we all look forward to working with him in future satellite projects and in expanding the communications resources available to Amateur Radio operators worldwide.

* THANKS! *
==========
Thanks to all those who sent QSL cards, letters, and messages of appreciation regarding SpaceNews, especially:

How about providing the grid square location as a locator. That would sure
make things easier to look up for a given route one might be planning
on driving through.

Since most repeaters (at least the 2m nes) cover areas in excess of
the grid square they are located in, using a grid square location
would, I think, offer an interesting and useful approach.

As a concluding note, I again offer the information that no one can
copyright specific facts. The FACT that the K2GDD repeater on
146.895 is located in Morristown, NJ and is an open repeater is
purely factual data that is not protected by any copyright. As such,
gathering such data (IMHO) from any source to populate a software
database that is not printed out in any format resembling an existing
printed directory, would not (again, by my layman interpretation)
be a copyright violation. Think about it...if it was, then once
a directory was created by anyone, then no on else would be able
to create another database using the same information. That's
just not the case. Almanacs contain lots of information as
reference sources. A chronological list of US president with the
dates they served is not anything protectable by copyright.

Just my .02.

An online repeater data base...I hope so.

I have the same problem. But my noise blanker in the FT-980 takes it out,
even on the lowest setting. If you want something to build, you might pick
up some op amps and start with the standard noise blanker circuits found in
the ARRL books and op am cook books. I believe it would be fairly easy to
make a blanker to take out the tic-tic-tic of an electric fence. All you should
need is a quick enough time constant I believe.

The ARRL repeater directory can only be as accurate as the information provided by the various co-ordination groups. That in turn is only as accurate as the information reported to the co-ordinators by the repeater owners.

I recently found out that a repeater listed at the Whistler ski resort has not been active for 12 years or so, the alledged trustee knows nothing about it, and the DOC shows the call as inactive. I guess the trustee didn't bother to tell the co-ordinators when he took it down.

NOTE: The Effective Sunspot Number for 22 FEB 94 was 26.0.
The Full Kp Indices for 22 FEB 94 are: 7o 6o 4o 5+ 4+ 3o 3- 3o
The 3-Hr Ap Indices for 22 FEB 94 are: 140 80 27 54 34 16 11 15
Greater than 2 MeV Electron Fluence for 23 FEB 94 is: 7.9E+08

SYNOPSIS OF ACT

Solar activity was low. A C1 x-ray event occurred at
23/0146Z and another at 23/2051Z both were optically
uncorrelated. The three spot groups visible have been stable.

Solar activity forecast: solar activity is expected to be
low.

The geomagnetic field has been at quiet to unsettled
levels for the past 24 hours. Brief periods of minor to
major storm levels occurred at high-latitudes.

Geophysical activity forecast: the geomagnetic field is
expected to be quiet to unsettled throughout the period.
Intervals of nighttime substorms are possible during the
next 24 hours.

Event probabilities 24 feb-26 feb

Class M 05/05/05
Class X 01/01/01
Proton 05/05/05
PCAF Yellow

Geomagnetic activity probabilities 24 feb-26 feb

A. Middle Latitudes
Active 25/25/15
Minor Storm 15/15/10
Major-Severe Storm 05/05/01

B. High Latitudes
Active 25/25/20
Minor Storm 20/15/15
Major-Severe Storm 10/05/05

HF propagation conditions continue to gradually improve.
Middle and low latitudes are observing predominantly normal
conditions, while high and polar latitudes are still seeing
periods of minor signal degradation and below-normal
propagation due to residual night-sector substorm activity.
Conditions should return to near-normal over the higher
latitudes over the next 24 to 36 hours and should then remain
normal for at least the next 48 to 72 hours.

EVENTS WIT

Date Begin Max End Xray Op Region Locn Sweeps/Optical Observations
---
NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

It seems you don't understand the contradiction in the above paragraph.

"not for profit" does not mean "doesn't handle money"!

ARRL has various sources of income, dues (from those of you that aren't
life members :-), sale of publications etc. One of those sources is the
repeater directory.

Every one of those income sources must go to services or support of some
kind or theu show a profit, but on the other hand the money for those
services and support has to come from somewhere!

In other words "we have to make money off it" is a perfectly valid reason,
especially considering the man-years of effort that went into creating the
publication in the first place!

i don't think the KWM-380 has any kind serial data bus on it. if i remember correctly the inputs are a switch matrix that lets you set the frequency. i don't recall much else being adjustable from remote control (it is a late 70's design radio...15 years ago or so??)

should have been in the manual for the equipment.

2158. Re: On-line Repeater Directory

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-25 21:44:15 UTC
From: ham@wam.umd.edu
Message-ID: <2klrff$c01@cville-srv.wam.umd.edu>
Source record: 270495
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

Just because there's an online repeater directory out there doesn't mean that there's no market for the ARRL Repeater Directory. As stated previously, who really wants to carry around a bunch of 8-1/2 x 11 inch sheets of paper, anyway?

All of you people out there - have you seen that incredibly neat repeater MAP book out there? It shows up at hamfests all the time, and MANY times have I considered getting a copy, because it's a lot easier to look at a map, compare it to your road map, and SEE what repeaters may be within range. The ARRL seems to not be too worried about that one, and it probably isn't cutting into the league's profits too much.

So why worried about this one?

I am in the process of becoming a life member, and I'm proud of what the ARRL does for its members, but,

Hey, ARRL, this guy's trying to do something useful. Get off his case. Howzabout he SHARES the project with you? Then you get to keep the ever-so-precious data, AND people can still utilize the online DB!

2161. 2nd CFV: sci.geo.satellite-nav

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-25 21:53:34 UTC
From: rdippold@qualcomm.com
Message-ID: <sci.geo.satellite-nav-CFV2@uunet.uu.net>
Source record: 270497
Cross-posted to: news.announce.newgroups,news.groups,rec.autos.tech,rec.backcountry,rec.boats,rec.radio.amateur.misc,sci.aeronautics,sci.engr.civil,sci.space.tech,rec.aviation.products,rec.aviation.piloting,sci.geo.geology

LAST CALL FOR VOTES (of 2)
unmoderated group sci.geo.satellite-nav

Newsgroups line:
sci.geo.satellite-nav Satellite navigation systems, especially GPS.

Votes must be received by 23:59:59 UTC, 8 March 1994.

After this CFV appears on news.announce.newgroups, it will be posted
to the GPS Digest <gps-request@tws4.si.com>.

This vote is being conducted by a neutral third party. For voting
questions only contact rdippold@qualcomm.com. For questions about the
proposed group contact Andy Arkusinski <arkusinski_andy@si.com>.

CHARTER

This will be an unmoderated newsgroup.

SCI.GEO.SATELLITE-NAV was chosen because the focus of this group is on
navigation. The SCI.SPACE hierarchy deals with various aspects of
space exploration and use, but this newsgroup deals mostly with
terrestrial applications. The fact that the space segment is in space
is almost incidental to the focus of the newsgroup.

SCI.GEO.SATELLITE-NAV will allow a centralized location for discussion
of global navigation satellite systems (GNSS). The charter
specifically includes the US Global Positioning System (GPS) and
Russian GLONASS, but is also open to discussion of other existing and
future satellite positioning systems.

Some topics that fall under this newsgroup charter are:
* Technical aspects of GNSS operation.
* User experiences in the use of GNSS.
* Information regarding GNSS products.
* Discussion of GNSS policy (such as GPS
selective availability).
* Extensions to basic GNSS technology, such as
differential GPS and pseudolites.
* Navigational uses of satellite systems whose primary
purpose is not navigation, such as a communication
satellite net.

Examples of topics that would not fall under the group charter are:
* Other satellite systems such as communications and

intelligence gathering, except for navigational uses of
such systems.
* Discussion of space policy in general.
* Discussion of areas that may use GNSS, such as
surveying, sailing, or aeronautics, except as they
directly relate to use of GNSS.

GPS, in particular, has turned out to be a technology with a great deal of synergism with many fields. GPS is used, not only for military positioning which was the original purpose, but in applications as diverse as entomology and film making. A major intent of this newsgroup is to share the uses to which GNSS technology is being put, thus inspiring even more innovative uses.

While part of the SCI.GEO hierarchy, this newsgroup does not exclude non-terrestrial uses of satellite navigation. Use of GPS to determine space vehicle position is within the charter.

This group is also intended to function as a resource for newcomers, who can post their questions and receive help from others who have passed that way before.

Rationale: There is no single newsgroup where information on GPS and other satellite navigation systems can be found. Questions are often posted in newsgroups such as sci.electronics, rec.aviation, and sci.aeronautics. To address this lack, the mailing list GPS Digest was started about a year ago, and now has over 400 subscribers.

Recently we attempted to convert GPS Digest from a moderated weekly newsletter to an unmoderated reflector. Submissions, which had been running at 2-3 per week, immediately picked up to 15 the first day. Our resources were overloaded, and the Digest is back to the original format. Many readers indicated the real-time response was helpful and suggested the formation of a newsgroup.

The RFD and CFV will be posted to the GPS Digest mailing list as well as Usenet newsgroups. Only those readers with access to Usenet should cast votes (for or against) formation of the newsgroup.

HOW TO VOTE

Send MAIL to: voting@qualcomm.com
Just Replying should work if you are not reading this on a mailing list.

Your mail message should contain one of the following statements:
I vote YES on sci.geo.satellite-nav
I vote NO on sci.geo.satellite-nav

You may also ABSTAIN in place of YES/NO - this will not affect the outcome. Anything else may be rejected by the automatic vote counting program. The votetaker will respond to your received ballots with a personal acknowledgement by mail - if you do not receive one within several days, try again. It's your responsibility to make sure your vote is registered correctly.

Only one vote per person and per account will be counted. Addresses and
votes of all voters will be published in the final voting results list.

```
--- SOLAR TERRESTRIAL FORECAST AND REVIEW ---
February 25 to March 06, 1994

Report Released by Solar Terrestrial Dispatch
P.O. Box 357, Stirling, Alberta, Canada
T0K 2E0
Accessible BBS System: (403) 756-3008

---------

ANNOUNCEMENT: The Solar Terrestrial Dispatch is pleased to announce the
release of a major HF and refractive-VHF propagation software package known
as SKYCOM. It is a MUST-HAVE for anyone involved in ionospheric radio
communications. This significant software package will analyze almost every
ionospheric parameter relavent to radio communications and will analyze the
behavior and characteristics of signals that pass between any two points on
the Earth and under almost any type of geophysical condition (geomagnetic
storming, solar flares, polar cap absorption, etc). Graphically ray trace
signals through a real model of the ionosphere, generate extensive global
ionospheric "weather" maps, produce broadcast coverage maps, and MUCH more.
The list of available functions is far too large to list here. For more
information, contact "Oler@Rho.Uleth.CA", or "COler@Solar.Stanford.Edu".
Pricing information can be obtained from the e-mail address above, by writing
to us through postal mail, or by calling the recorded message at:
403-756-2386 (approx. 3 min). A special offer applies until 31 March 1994.

A-index or the Boulder A-index. Graph lines are labelled according
to the severity of the activity which occurred on each day. The left-
hand column represents the associated A-Index for that day.
Q = Quiet, U = Unsettled, A = Active, M = Minor Storm,
J = Major Storm, and S = Severe Storm.

CUMULATIVE GRAPHICAL CHART OF THE 10.7 CM SOLAR RADIO FLUX

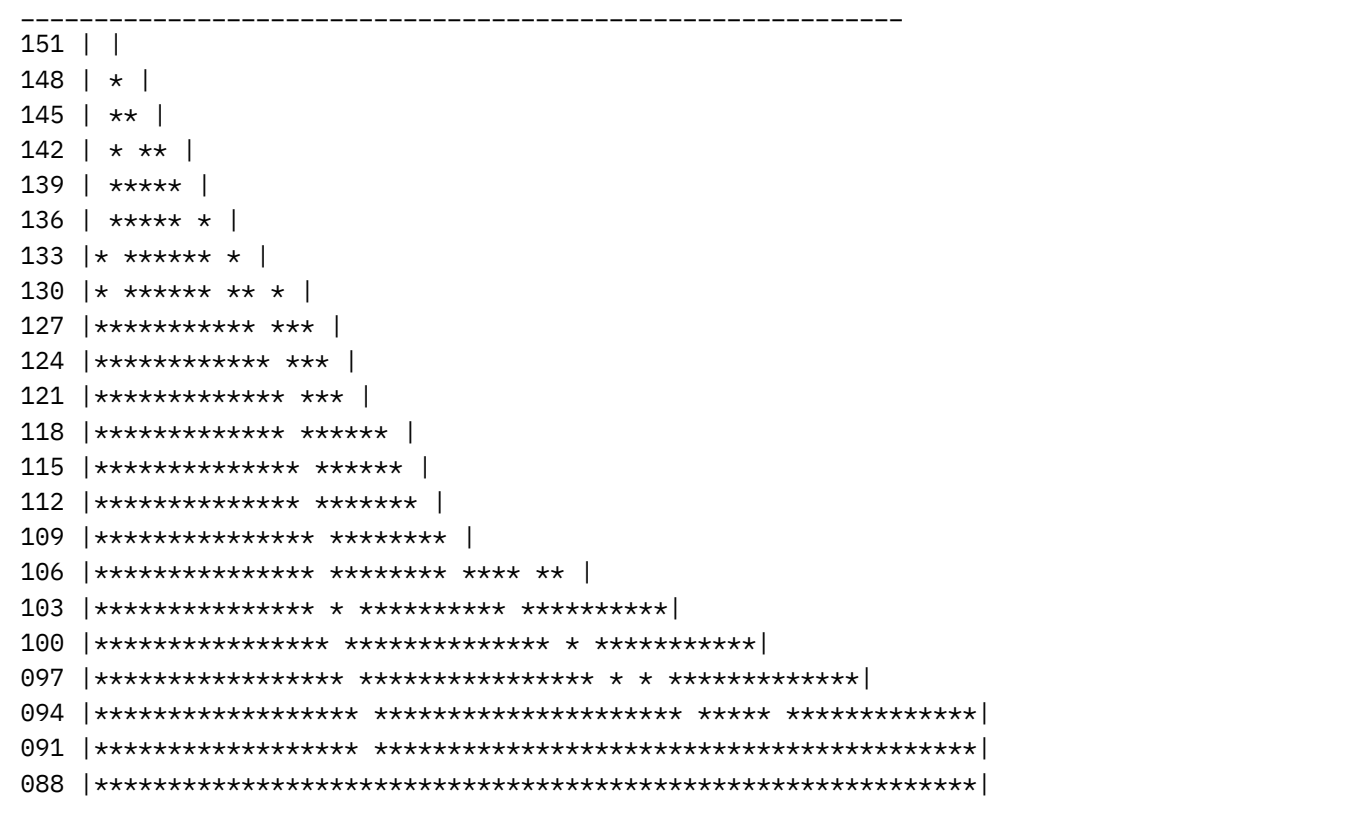

Chart Start: Day #362

GRAPHICAL ANALYSIS OF 90-DAY AVERAGE SOLAR FLUX

```
------------------------------------------------------------
Chart Start: Day #362

NOTES:
The 10.7 cm solar radio flux is plotted from data reported
by the Penticton Radio Observatory (formerly the ARO from
Ottawa). High solar flux levels denote higher levels of
activity and a greater number of sunspot groups on the Sun.
The 90-day mean solar flux graph is charted from the 90-day
mean of the 10.7 cm solar radio flux.

To subscribe to the list, send a message to: majordomo@world.std.com
In the body of the message, type: subscribe ham-tech

What you will receive if you subscribe to the list:

Welcome to the HAM-TECH e-mail list.

This list was designed for people with technical ham related questions
(antennae, radios, digital communications, etc) to share information with
each other.

If you do not have Usenet access, or don't have time to read news, or you
need information faster than Usenet can provide, or your question doesn't
fall into the catagories Usenet provides, or you simply want more mail,
please feel free to ask your technical questions, offer answers, or
whatever else you have to share.

Feel free to get as technical as you like.

This list is open to all.

To submit your message to the list, e-mail: ham-tech@world.std.com

If you wish to speak with the list's owner, please send e-mail to:
ham-tech-approval@world.std.com

73 to all,
Scott Ehrlich, WY1Z

2164. Transformer Failure Modes?

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-25 23:11:42 UTC
From: mebly@eng.umd.edu
Message-ID: <2km0je$jgh@mojo.eng.umd.edu>
Source record: 270460

The proverbial friend of mine has two transformers. They are 110/220 VAC input, 50 VAC output and rated at 15 amps.

He needs 25 volts, not 50. The obvious solution is to feed 110 into the 220 input windings.

Question: Do we have to de-rate the output current to 7.5 amps?

Speculation:

I doubt the I**2 * R heating of the windings is an issue here. What about saturation of the core? Or saturation of the core? Eddy current heating?

My first inclination is to de-rate the output current using the transformer. Any advice? We can't be the first people to do this. :-)

Bryan,
my thanks to you for moving this program to a more accessible area & to
everyone else on the net who has assisted me in my search. I've downloaded it,
unzipped it, now all we have got to do is make it work :-) !

Thanks & 73,

SB SPCL ARL ARLX010
ARLX010 Kepler film on tv

Kepler film on TV

NASA Select television will show a 35-minute film on Johannes Kepler
and his formulas for computing orbits on Friday, February 25, at 1
PM Eastern Time.

The film, ''Spaceflight-The Application of Orbital Dynamics,'' also
answers questions about launch locations and their limitations,
according to AMSAT.

NASA Select TV is available on some cable television systems. It is
available direct on Spacenet 2, Channel 9 (3880 MHz, horizontal).

From: Cecil_A_Moore@ccm.hf.INTel.COM
Message-ID: <940225161835_65@ccm.hf.intel.com>
Source record: 270457

Text item: Text_1

>Subject: Need info on RAMSEY FX remote tuner
>Does anyone know sources of information on an external digital tuner
>(not using a PC or anything non-portable) to randomly tune throughout
>the FX's entire frequency range? Lee Devlin N3IWP

Lee, I hesitated in this posting... but my good friend Don, KE6AJH, of TechnoLogic Concepts is supposed to be coming out with an 80C51 based controller for the Ramsey FX series of transceivers. Please send me an e-mail (not to this group) and in the meantime, I'll find out how he's coming along.

It would be great if they were. That would make life much easier. The online repeater directory was started, if you remember, after a discussion of how one was very desirable but not available. If this exercise pushes the ARRL into providing us with an electronic version of the directory then, in my opinion, the project has achieved its goal. If they don't do it then somebody else needs to - and if it requires writing a letter to each of the coordinating bodies and trying to get them to provide a copy of their list so we can enter the data and provide the data then so be it. I would just like to see somebody provide it in electronic format so that I can use the nice sorting/searching tools to find what I want without having to wander through pages and pages of fine print that is not organized in exactly the way I would like to see it.

Bob Levine (levine@mc.com) wrote:
: Anyway, it is pretty inconvenient to log into an FTP site
: while you're doing 55 ;-) to find the local repeater frequency.

But I'd use the database to print out a list in the format
I wanted. Often I want it for a medium-sized area listed by
frequency, not by arbitrary town. I find the ARRL directory to
be very inconsistent in this regard.

: BFD to shell out $6 per year?

For me it's not the $, it the lack of usefulness, ultimately.

Uh, Greg...hate to burst your bubble, but the ARRL _isn't_ the official frequency coordination authority. It has explicitly avoided accepting that role.

As much as I would like to see that change, it's not doing it now.

As for the bit about "unfair competitive advantage", wasn't Conway rekeying the data straight from the repeater directory to disk? If so, that _is_ a copyright violation. They can't copyright the facts, but they can copyright the collection of facts into a whole. Just ask Compuserve.

I apologize to the folks at STD.COM for calling them names. As I said in another post, I was not feeling good this morning and misinterpreted the messages their anonymous ftp site sent me before I got kicked off. I assume they were either having problems, or doing backups, and I jumped to the wrong conclusion.

They do have a very nicely organized section in their anonymous ftp site (ftp.std.com) with amateur radio specific topics. Which is why I was trying to get to them in the first place.:-)

This is a reasonable-sounding theory, but it doesn't match the facts as we have them.

We *already* had someone willing to do the work of compiling the online directory for no money. So it's clearly not true that we'd have no list if the ARRL couldn't charge monopoly rents for it (which, at $6, they aren't doing anyway!)

We also have plenty of evidence that people will still buy the ARRL Repeater Directory, since they don't usually have a good Internet feed, or a laptop with CDROM drive, in the car.

Sure, somebody could typeset the online one, have it printed up, and try to distribute it--but the ARRL has the volume to get economy of scale, the distribution network in place to get it out, brand name recognition, and a captive advertising audience in QST. How on earth is a competitor going to match that?

Simple. "Buy this directory, not a single dime goes toward the ARRL."
Considering how many hmas out there constantly bitch and moan about the
ARRL, that ad line should net millions.

It doesn't mean that they have to make a profit on everything, either. I
don't think that a computer-based directory and the printed directory would
be in competition anyway. I'd get both. I have a printed callbook AND a
CD-ROM callbook. They have different purposes.

> The non-profit
> aspect only applies to how they are taxed.

That is a terminological inexactitude. Non-profits have to justify their
tax status. Non-profit status has an effect on how organizations are run
and what they can do.

Oooops! The problem you are having has to do with all the things
Windows thinks it needs to be involved in, even though you are totally
unaware of all the activity... after all, it is Bill, and it is M/S
under neath all that...

When you select a DOS prompt from Windows, all the garbage gets hauled
around with you and the machine is kept VERY busy with its own
housekeeping... and doesn't care that YOU want to play with
SuperMorse.
The same is true of many other TIME dependent programs that simply will
NOT work under windows and require the *full* "attention" of the
machine...like SuperMorse.

It is a problem with WINDOWS and NOT with SuperMorse. When you want to
do code practice, just quit windows and go for it... if that is too
much trouble, get one of those wimpy plug and play not problem to use
with built in graphics interface (Mac) and enjoy life as a user... ;^)

From: hmwaljee@athena.mit.edu
Message-ID: <2kmlfm$e2b@senator-bedfellow.MIT.EDU>
Source record: 270452

Hello. I am not sure if this is 100% relevant for this channel, but I figure that the people that would know anything about the area of my question are subscribed to this channel.

I am a student here at MIT that is implementing a project to "track" the MIT shuttles, so that students logged into the network will be able to find out where it is and when to wait. In order to do this, I was probably going to use a numerical code, transmitted using touch-tone (DTMF) encoders and decoders,

In order to do this, however, I would have to use a frequency on which to transmit. Thus, this project then finds itself at the hands of the FCC. I was wondering if anyone out there knows about the regulations concerning broadcasting "beeps" over the range of a few square miles in a major city. This will probably be a signal in the range of 10^1 kW. Which regulations apply? How do I find out about them? What radio bands would/could I use? Any idea as to the efficiency of such transmission?

Anyway, thanks for listening, and I hope someone out there has both the answers and the time to write back.

Scott Ehrlich <wy1z@netcom.com> writes:

>I am considering getting an MFJ speaker/mic for my FT530 mainly due to
>the price.

I would advise strongly against the MFJ. I bought one once and was very dissatisfied with the quality, both of the sound and the workmanship. Receive audio became distorted at only moderate volume...in order for it to be clear, you would have to have the volume so low that you would have to hold it against your ear to hear it over road noise. Also, the wires began to break within a few weeks. I bought a Yaesu and have had years of good service from it.

Greater than 2 MeV Electron Fluence for 25 FEB is: 2.2E+08

SYNOPSIS OF ACT

Solar activity was low. Only one C-class flare occurred
during the period which was not correlated optically with any
region. A 5 degree filament near S30E42 disappeared between
25/0027Z and 25/1421Z and an 11 degree filament disappeared
between 25/0810Z and 25/0824Z near N11W71. A new region was
assigned today as Region 7679 (N02E25).

STD: Moderate Ca XV emissions were observed on the northwest
limb from the same area which had extremely intense emissions

two weeks ago. A full-disk Yohkoh x-ray image has been appended to this report showing the location of the enhanced west-limb x-ray emissions and the associated location of the Ca XV emissions.

Solar activity forecast: solar activity is expected to be low.

The geomagnetic field has been at quiet to unsettled levels for the past 24 hours. An isolated period of active levels occurred during the nighttime sectors at mid-latitudes with minor to major storm levels at high-latitudes.

Geophysical activity forecast: the geomagnetic field is expected to be quiet to unsettled through the period.

Event probabilities 26 feb-28 feb

Class M 05/05/05
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 26 feb-28 feb

A. Middle Latitudes
Active 15/15/15
Minor Storm 05/05/05
Major-Severe Storm 01/01/01

B. High Latitudes
Active 20/20/20
Minor Storm 10/10/10
Major-Severe Storm 05/05/05

HF propagation conditions were near-normal over all regions. A brief period of enhanced activity between 06:00 and 12:00 UTC resulted in minor signal degradation for affected high-latitude paths, although conditions improved to normal thereafter. Normal propagation conditions will persist throughout the next 72 hours, through 28 February inclusive.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

Foolish. The ships don't xmt on the shore station's frequencies - they
work QSK - full breakin - using seperate frequencies.

Listen during the weather observer reports (OBS) every 6 hours starting
at 0000Z.

You're hearing the CQ tape. I'll list the 4, 6, 8, 12, 16, and 22 MHz
shore calling frequencies, the ship's calling bands, the ship's low-
traffic working bands, and the ship's high-traffic working bands when
I get some time.

Reading ahead several articles I see the Angus is starting to get nasty.
I can see this will be a long drawn out thread; since we share the
same name I'll refer to him by his schooldays' nickname, Cow, so no one
gets confused.

In article <CLpKv4.4qs@ucdavis.edu> ez006683@chip.ucdavis.edu (Daniel D. Todd) writes:

>with a basket-weave design.
>ergo. You were called a wannabe cop.

Why is Cow so facinated with the type of belt a cop wears? As a fireman
back in Southern California (Orange County) I worked with cops daily
and never took notice of the type of belt they wore. Kind of weird...
One wonders what other parts of their clothing he has a fixation on.

CQ Netters,

While browsing through some modification files for the FT-470
I spotted a hardware modification that clames that the set is
able to be converted to cover 1.25 m and 23 cm bands in place
of the original 2 m and 70 cm bands !!!
Has anyone tried such a modification ? has it worked ? if yes
at what expence (receiver censitivity) ??
Please reply via e-mail to: demetre@intranet.gr

Hello All,
The Cornell Amateur Radio Club will be operating
from the local Mall on Saterday Feb 26th from 10am
to 6pm on 10 meters. This is for Engineeering Day
at the Mall, a local 'get kids interested in sciecne'
day. We will be on 28.365Mhz/28.465Mhz depending on
other traffic. If both those freqs are busy, well
you'll have to find us. Operators will include..
Jeff N2TIQ
George N2XNE
Jon KB2MTI

among others. WE'll basicly be showing people what
ham radio is about, and would like to talk to some
hams from around the country (most likely CA though
the way things have been on 10m for me laterly, buttt....
Hope to see you there,
Thanks,
-Jeff Luszcz N2TIQ

Thank you for playing "Usenet Roadkill" Jeff. Jay, tell him what he's won;
Well, Jeff's the lucky winner of just under a thousand rounds of 9mm ammo.
A real bargain at only 7 cents a round. (see relevant thread in gun news)

Nice try loser. You're the one with the fixation. Post after post about
the "problem" at the university. How come you're the only one complaining?
Surely you're not the only heterosexual left on campus.

By the way, I'm glad to see that the phrase "wannabe" has gotten to you.
Perhaps if you stop playing net.cop people will stop calling you that.

Handy usenet flame tip: wrap the keybaord in Saran Wrap(tm) prior to
responding to personal attacks. It makes it easier to keep the spittle
off the keys while frothing over the posting you're quoting.

>the person who commented about ACE Communications detailed return
>hassles and said, "I won't do business with ACE."

ACE submitted a reprogrammed MVT-7100 to the FCC for certification last
year. The FCC turned down the application because they had not excluded
enough of the cellular frequencies, and the unit emitted too much RFI
(this radio is poorly shielded). ACE cannot legally sell this radio in the
US.

The MVT-7100 is a $600 radio. Are you sure the $399 price you was wasn't
for the MVT-7000?

>Unfortunately, the only other place I've heard of the MVT-7100 being

>by itself, with no monitary interests involved (and no "leader"
>to lynch :-).

Except that most likely the newsgroup would turn into about 99.9% questions (and arguments), and maybe 0.1% useful information. You could make the newsgroup moderated, of course, but that would require a committed volunteer moderator (and that would introduce a "leader" to lynch, which you wanted to avoid). It would seem that as a practical matter, ultimately you need someone to take responsibility because order and organization on the net will *NOT* happen "naturally by itself."

Such a newsgroup was discussed at the last major reorganization about 8 months ago, and was put aside because most opinions were that it would collapse into flamage over repeater coordinating bodies and how information is gathered for existing directory projects (more worthy of *.policy). However, since that time there may be renewed sincere interest in running a proper newsgroup on the subject.

If you want such a newsgroup proposal to be successful (both in passing a vote, and in having worthwhile content after it is created), you should probably round up your volunteers up front. Find yourself at least a half-dozen committed contributors and an FTP site. A good first place to turn would be the rra-wg (rec.radio.amateur Working Group) mailing list. They could advise you regarding volunteers, finding an FTP site, and will at least try to convince you that rec.radio.info is what you wanted all along :-). They can also offer you guidance regarding the RFD/CFV process. To subscribe, send E-mail to rra-wg-request@amdahl.com.

Yeah, I have a couple, but these are just raw gunnplexer components.
Kitting up a competent data transceiver runs the price up a bunch.
Note for a nationwide network you need a *lot* of these transceivers,
and not everyone will be a microwave guru who can whip up something
out of available surplus. We're going to need standard kits, and
assurance of continuing spares to maintain the network.

>Dish antennas aren't as cheap as they used to be, almost doubling in
>price. But at around $130 (including shipping) for a pair of new 2 ft
>dishes, I'd say the costs are similar to that for VHF yagis.

And surplus is currently even cheaper. I've been buying dishes for much
less as a lot of the terrestrial customer networks convert to fiber optic.
Georgia Power took a bunch of 4 footers out of service and sold them
cheap. Unfortunately some of them have a lot of bullet holes in them,
but there were servicable ones in the group, and some up to 8 foot.
(Don't bother to write, they're all gone now. Just keep your eyes open
for opportunities in your local area.)

>Why not 10 watts? I've noticed 6 GHz 5W and 10 watt bricks showing

>showed a 2.5 dB NF with 15 dB of gain at 5.8 GHz.

If we weren't in danger of losing much of our 2 GHz allocation, there
are a lot of 10 watt amps showing up on the surplus market that could
be used there. 10 GHz, however, is another matter. Finding 10 watts there
is tougher unless you fall into a large cache of klystrons or TWTs.

>I don't get this. Why not use buildings man made mountaintops?
>Sure, often takes a bit of politics or $$$ to get them, but once
>you manage that, I'd say that a nice rooftop is better than a
>mountaintop of similar elevation. Usually, power and access are
>much better.

Because they are rarely where you need them. You use them when
they're in the right place, and you can get site access, but
tall buildings are mainly clustered in metro downtowns. That
doesn't help much when you need to cross farm country to get
from one metroplex to the next. Plus those building clusters
really cause a lot of multipath problems, and those downtowns
are generally also very high RF environments. Staying away from
them is generally a win.

At least in the Southern Appalachians, most mountaintop sites
have reasonable service roads going right to the door of the
site shack. That's often easier than trying to negotiate a
bunch of tools and test equipment to a rooftop site downtown
with its poor parking, security checkpoints, and tied up freight
elevators. I've spent 2 hours just *getting* to the roof of the
Bell Center. I can drive up Sweat Mtn, fix the problem, and be
back down in 2 hours.

Note the main point, however. Even with 1000 foot HAATs, LOS
range is still modest compared to the distances we have to
span in connecting the metroplexes, never mind the distances
involved in connecting hamlets and individual rural amateurs.

>Another source of man made mountaintops are amateur
>towers, particularly those of DX and contest types. Sometimes,
>hams will let you put stuff on a tower, particularly if it doesn't
>cause interference. Here, microwave gear can have its advantages.
>(forget trying to put 20 meter stuff on an HF DXer's tower for
>your digital link). As hams get older, they seem to be more
>willing to let others climb their tower. Even some youngsters
>will let you do their tower work :-).

Some DXer's towers are a little better than the 40 foot masts I figured
above, but finding 120+ foot towers along your path in the necessary
places is still a chancy business. Not *that* many DXers have killer
towers, or live in the rural areas your links have to cross.

>: To summarize, if we could depend on having LOS paths, a 10 GHz system

>them scarce again). Thus, I can see hams buying surplus $20
>to $50 microwave amps to build long distance links, while such
>amps would be impossible to have mass produced at
>low cost, even if every USA amateur were to buy one.

Well we are taking the crossband approach with our 56 kb net. We use alternating 222 MHz and 430 MHz links now. If the 219 MHz segment opens up, we can use that along with 430 MHz instead and give back our wideband chunks on 222 MHz to the voice repeater boys. That band's filling up fast.

Here's the situation as I see it. We need a nationwide network with better thruput than 1200 baud simplex digis. Everybody recognizes that. (Well unfortunately not *everybody*, we still have those who say 1200 is faster than they can type. They don't understand that a digital network is for far more than keyboard QSOs and BBS DXing. That mentality of low thruput and random individual contacts, fostered by our history with CW and DXing, is rather prevalent among a certain group of hams.)

To get that higher speed network, we need a lot of sites, fewer if we can do longer range hops, many more if we're restricted to LOS. And those sites will have to be erected primarily by digital networking folks whose RF expertise is often marginal at best. And those links will have to be *maintained* indefinitely if the network is to survive. This argues against ad hoc surplus lashups and poor link margins. Of course each site is going to be somewhat unique due to it's specific terrain problems, and those of it's neighboring sites. However, we need to establish some baseline network link standards that can be applied to most sites and paths. These can serve as guides to both the equipment developers, and to the site installers and maintainers. This is similar to old Bell System Standards and Practices documents.

We really need to do a hierarchy of RF link standards from 9600 baud VHF through 56kb UHF and on up to high performance microwave systems at the megabaud+ level. It's obvious that not all areas are going to be able to be served with megabaud+ trunks. Either because of terrain or remote location or lack of local activity, some branches of the network are going to have to be at lower speed levels for some time yet. There are vast stretches of the country where the amateur population is so low that there will be no one nearby to erect or maintain network sites of even moderate complexity. Even given that, however, I'd still argue that even a low speed amateur link is better than using a telco bypass gateway. That rather defeats the purpose of an independent amateur *radio* network.

We need standards for reliability, such as path fade margin standards, frequency stability standards, life cycle maintainence requirements, etc. We need interoperability standards. And we need a load shedding and reroute methodology. We need pre-engineered plans for short, medium, and long path hops, with the appropriate baud limits for each of those types of paths. We need BER standards such that we can say X path needs to be of Y kind to meet network BER requirements, or we need to use FEC or some other method of assuring prompt error recovery on that path. Etc, etc, etc. I hope that some of the participants here will toss out some trial balloons on these points so we can get to work developing a coherent national plan.

I've never dealt with ACE, but I believe I have the buyer's guide you
are talking about - 'CQ Amateur Radio 1994 Equipment Buyer's Guide',
right? The ad in question is one page 63? If so, check again, it's
listed at $599.

From my recent inquiries here (thanks again to all who responded - you
know who you are:) a comparable radio in your price range is the AOR
AR1500 ($450ish)

I'm about to take the plunge and cough up for the MVT7100 from the UK
Not that I can afford it but, errm, well, er I'm English and I'll be
helping the economy, yeah that's the ticket!

Wondering if my girlfriend will buy such a feeble lie,

HamComm is a good program that will do RTTY as well as Morse. If you
can't find it from a local source you can ftp it from ftp.std.com .
Here is a desciption from the doc file.

HamComm
Version 2.0
October 10th 1991
W. F. Schroeder
DL5YEC

HamComm is a program for ham radio communications. It supports
reception and transmission of amateur radio teletype and Morse code
signals. A converter or modem chip is not required. The audio output
of the receiver is connected to the serial port of any PC/XT/AT
compatible computer thru a very simple and low-cost circuit. Only one
IC is needed (Op-Amp LM741 or similar) and a few diodes, capacitors and
resistors. The supply current is drawn from the serial port. For
transmission the speaker output is connected to the microphone input of
the transmitter thru a passive r/c filter. Audio frequency decoding,
serial/parallel conversion and all other signal processing is done by
the program.

Good luck with your license.

2206. sm410.zip - Super Morse: Morse code tutorial and practice

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-26 19:16:38 UTC
From: bob@mtdcr.att.com
Message-ID: <9402261916.kp29385@SimTel.Coast.NET>
Source record: 270434
Cross-posted to: comp.archives.msdos.announce,rec.radio.info,rec.radio.amateur.misc

I have uploaded to the SimTel Software Repository (available by anonymous
ftp from the primary mirror site OAK.Oakland.Edu and its mirrors):

pub/msdos/hamradio/
sm410.zip Super Morse: Morse code tutorial and practice

Super Morse v4.10 by M. Lee Murrah (71016.1355@CompuServe.COM) is a
Morse code tutorial and practice program. It can be used with the PC's
speaker or a Sound Blaster or compatible card.

Requirements:

Memory: 384K
Drive : Floppy disk or hard drive
Mouse : Microsoft
Serial Ports: 3 for full use of Super Morse features.
Video : Monochrome or color

Changes:
* Increased variability of text in internally generated QSOs.
* Compensated for speed change that occurs when code weighting changes.
* Character review that is available when an error is made in the Learn
quizzes is now selectable.
* Display of character choices in Learn prompts is now selectable.

I need a little help with an English paper I am writing. The topic I am writing about is jargon used by amateur radio operators. I am already using ham, lids and an abbreviation. What I need is one more word that has an interesting etymology.

Does any have any good suggestions? I am stuck and would like another term. Please send me Email

Thanks

2209. Travel to Mexico

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-26 19:31:25 UTC
From: dep@scr.siemens.com
Message-ID: <CLuJKD.LwH@scr.siemens.com>
Source record: 270461

Hi

I will be traveling to Mexico and I was wondering if anyone could
tell me what repeaters are on the Pacific cost from LA to Alcapolco?

Also is my US license good in Mexico or do I have to get permission
from Mexico (license) to operate there? If I need a Mexican license
how do I get one?

Thanks for the help. Please email me directly or post to the
net.

Thanks

Ironic how we suspect each other's past: your hang up with cops' belts - leather whips and chains, too?

Not much happened in the Coast Guard other than getting paid to play with radios and the satisfaction of helping to save some lives; firefighting back in So. Calif. was more exciting, though.

You're in Compton, Cow? Growing with with your scanner, if you listened to the Orange County fire channels, you probably heard me on the air from time to time (46.16 MHz).

Source record: 270464

Hi All,

If the ARRL is making a loud noise about the Online Repeater Project, how much of EXPLOSION did they make when the Online Callbook came out? IMHO there is no difference between the ARRL callbook and the Callbook, except ease of use. Both Callbooks were targeted for different individuals. For those with internet access, the on-line callbook is perfect, for those without internet access, use the printed version! Both versions supply the same information!

The on-line repeater project will, in addition to listing freqs, city, state, trustee,etc will also give geographical coordinates and other information that will be of help to the traveler (assuming that routes are planned in advance).

Once again, these two repeater sources will be targeted at different people.

I agree, that the printed version is great for the glove compartment, and handy to have, if you wander off the beaten path while on vacation, but the ARRL should not prevent another source of this information from being withheld from the public.

Copyrights are somewhat like patents: You change the format, even a little, and you have and you have something different. If you add more information, you have changed the whole thing.

Can you imagine what size the ARRL repeater guide would have to be to have the same information that the on-line guide will have (my glove compartment is not big enough ;-)).

Personally, I'm all in favor of the on-line version. I say go ahead with it!

My .02 worth.

For about $6.00 you can buy the ARRL Repeater Directory. The
same directory that is currently being whined about. In it you will
find reapeters for the whole U.S.. Also every band is covered
separatly. Plus the European (Region 1) VHF/UHF band plans are in
there.

You can pick up this directory in any ham store, or buy it
direct from the evil ARRL.

Cross-posted to: rec.radio.scanner,rec.radio.amateur.misc

Andrew,

I tried to order a Yupiteru MVT7100 based on the ACE Commun-
ications ad on page 11 of the November Popular Communications, shown
at $599. "Debbie" at ACE told me that they weren't in stock because
a whole container load had "disappeared in transit". After mulling
this over for a few days and becoming increasingly uneasy, I called
and cancelled the order. I have since learned that they cannot sell
that scanner legally in the US. I got mine from Javiation. In the
same issue on page 80 is another ACE ad showing both the Yupiteru
MVT8000 and MVT7000 for $399 each.

I don't know where you've been, but I hate to break it to you - the
League is a business, interested in one thing - making money. Maybe not
for the "League" as a whole, but take a look at the people who actually
WORK for the League - examine your QSTs over the years and look at the
names of the people who have made a career "working" for the League.

However, the League *IS* a business, whether you like it or not. Over
the past decade, the league has taken positions on issues in Amateur
Radio which suit the financial interests of the League, not the position
which the members want (yes, there are examples where each has the
same position.)

Anyone who doesn't think the League is a business ought to
open their QSTs to the monthly 6+ page advertisement which contains a
list of League publications, and the ARRL Video Classes, Tapes, etc.,
to remove all doubt.

Umm... I'll quietly not comment on this line; nobody owns the individual
pieces of data.

>John E. Taylor III (rohvm1.mah48d@rohmhaas.com) replies:
>
> > I'm an ARRL member, and considering ARRL put a fair amount of effort

>I'm an ARRL member, too, but I couldn't disagree more with John's opinion on
>this issue.

I'm afraid I have to agree with John on this one. That's why I specifically
asked that people *NOT* type in the repeater directory when I was trying this
same project several years ago.

The thing that is most noticably missing from the paper form of the Repeater
Directory is location information and HAAT that is useful to someone who
is not familiar with the geography of the area. For instance, it's non-
obvious (to someone who hasn't been there) that a repeater in Cambridge, MA.,
will easily cover "Boston" (whatever that means unto itself; is it the city,
the metro area?), Sommerville, and all manner of little towns outside the
195 (I think it is) loop. I only figured this out after quite a bit
of experimentation, and looking at a topo map didn't help a whole bunch,
because I didn't know HAAT or location.

I'll admit that this example is somewhat contrived; it's much worse out
here in the west where there are hills (if not actual mountains) between
you and the repeater. For instance, there is a repeater less than 10
miles from my home QTH which I have *no* hope of hitting; there's the
side of a hill in the way.

This is why I was trying to get Latitude / Longitude / HAAT information
when I was building an online database. However, after more than a year
of data gathering (almost completely by asking people on the 'net to
submit their favorite repeater), I had 50 repeaters nationwide. I will

readily admit that I didn't "market" the database aggressively, because
I didn't have time to. However, I did check the coverage one several
of the entries by looking at a topo map of the area, finding the repeater,
and looking at what the coverage should look like. It seemed to match
my expectations.

On another note, it seems that there are a great many repeater owners who
are unwilling to let the exact site of the repeater be known; I have to
admit a large amount of confusion on this point, since RDF techniques are
so simple as to make finding a repeater trivial.

Oh, by the way Todd, I buy *4* copies of the paper directory; home, work,
car, and the emergency bag. ;)

: If the ARRL is making a loud noise about the Online Repeater Project, how
: much of EXPLOSION did they make when the Online Callbook came out? IMHO
: there is no difference between the ARRL callbook and the Callbook, except
: ease of use. Both Callbooks were targeted for different individuals. For
: those with internet access, the on-line callbook is perfect, for those without
: internet access, use the printed version! Both versions supply the same
: information!
Hi Lynn,
The league probably didn't scream when the on-line callbooks were
published because they don't publish a printed callbook. The other
reasin they don't complain is that the source of the call book is the FCC
who doesn't have a copyright on the info. once you pay the $600 for it
you can publish it in what ever form at whatever cost you like. They are
complaining because they feel that copying the info out of their
directory and making it available to the public is a violation of their
copyright.

cheers,
Dan

Howdy...

Regarding ham jargon...here's a good one you might be able to use...it's XYL and it stands for ex young lady....(which I take great offense to as a deragatory remark (I am not an "XYL" because I am only 22 years old! :-)) The term is used to refer to one's wife...(because most hams are of male gender and all...) I think I might start refering to OMs (old men) as XYM and see if they like that...:-)
Anyway, hope this helps.....Drop a note if ya have any more questions, ok?

Later es 73!

: >be fine for 1 MB/s links. For more bandwidth, you can get new ones with
: >varactor diodes (voltage tuning) for $66 each.

: Yeah, I have a couple, but these are just raw gunnplexer components.
: Kitting up a competent data transceiver runs the price up a bunch.
: Note for a nationwide network you need a *lot* of these transceivers,
: and not everyone will be a microwave guru who can whip up something
: out of available surplus. We're going to need standard kits, and
: assurance of continuing spares to maintain the network.

Why is a microwave guru needed for gunnplexers? The only microwave
part is attaching the antenna, and I've not heard of anyone who
couldn't manage that. Granted, you probably want to mark which end
goes up, but this is a mistake more often made by experienced amateurs,
rather than ignorant newcomers :-).

: Because they are rarely where you need them. You use them when
: they're in the right place, and you can get site access, but
: tall buildings are mainly clustered in metro downtowns. That
: doesn't help much when you need to cross farm country to get
: from one metroplex to the next. Plus those building clusters
: really cause a lot of multipath problems, and those downtowns
: are generally also very high RF environments. Staying away from
: them is generally a win.

I've been told that the 10 GHz equipment at 4U1UN worked quite
well, unlike the VHF gear that got clobbered by the RF. Are
there really that many sites worse than the top of the United
Nations Building in New York City in terms of RFI?

One of the tricks to making microwave gear resistant to
interference is to use horn antennas or waveguide in your
input circuit. They make a very low loss high pass filter.
The waveguide below cutoff effect is quite effective in
reducing low frequency interference.

Perhaps the best cure for multipath is to go to higher frequencies
and use sharper antennas. Dish antennas normally have quite
clean patterns. You can also improve the pattern by under-
illuminating a dish, although this often isn't necessary.

Hi,

I've been using a HT as my all around 2M rig, but
have been itching to get a mobile rig. I've been
eyeing the Yaesu 2400H and now that it is $50 off
($299.95) it seems like it may be time to scratch
that itch.

I would appreciate feedback from those who have
the 2400 as to what they like or dislike about the
rig. I'm also open to any other suggestions on the
choice of a 2M mobile rig. Thanks.

>especially considering the man-years of effort that went into creating the
>publication in the first place!

While I don't have a problem with the League trying to make a buck off their publications, the "man-years" of effort that went into gathering the information was done by various coordinating bodies like SERA. The League doesn't pay a dime for the computer lists SERA furnishes to them.

Let me quote what SERA says about their database in the SERA Journal.

"The SERA repeater index may be published or reproduced in any form by any publication or electronic means to be distributed without charge. Appropriate credit must be given to the SERA Repeater Journal."

SERA lists 10 southeastern states in the Journal, Georgia, Tennessee, Kentucky, Mississippi, North Carolina, South Carolina, Virginia, West Virginia, and including the T-MARC coordinated repeaters in Maryland, Delaware, and DC. *This* is where the ARRL gets their listings for these states. They don't pay a dime for them, or for the man-years of effort that went into the coordinations and database. They don't even have the courtsey to give SERA credit for the information.

Now like I said, I don't mind the League trying to turn a buck, but they've sure got a lot of gall making lawyer noises to Yee claiming he's ripping them off when *they* are ripping off the efforts of the coordinating bodies.

Ha, Ha. The problem doesn't come with mounting the gunnplexer, or
even aiming them, the problem is making sure they're on frequency
and making rated power, and that the detector diodes haven't gone
south. Most hams don't have the appropriate test equipment, or the
skills to fabricate cheap alterative test equipment. Yeah, yeah,
a radar detector can serve as a minimal activity checker, but that's
not good enough to set up and maintain a legal and efficient link.

>Nations Building in New York City in terms of RFI?

Probably. The Peachtree Plaza in Atlanta, and the Sears Tower
in Chicago are two for sure. Their roofs are OSHA forbidden
zones because the RF is so intense there that it'll fry you

like an egg if you go out without disabling the transmitters. And there are microwave links at 57 Ivy that you can use to cook hotdogs. Even our parking deck at 1611 W Peachtree has 1000 watts of 24 GHz power feeding an 8 meter dish. Don't get in it's way. I've read that the transmitters on the top of the Empire State building are serious emitters too, but they aren't normally accessable due to the structure of the roof.

>One of the tricks to making microwave gear resistant to
>interference is to use horn antennas or waveguide in your
>input circuit. They make a very low loss high pass filter.
>The waveguide below cutoff effect is quite effective in
>reducing low frequency interference.

Sure, that helps, especially if you use *enough* waveguide. You need at least a 1/4 wave depth at the frequency of the *interference* to get meaningful attenuation. That is often in the 100 MHz region because of colocated FM broadcast transmitters. Remember you've got a simple diode detector in there that will respond to *any* RF of sufficient magnitude, and one of it's terminals is exposed on the outside of the gunnplexer. When the interference is at 10 GHz or higher, the waveguide doesn't act as a filter, of course, and there are thousands of 10 GHz emitters in LOS of a typical downtown rooftop from security systems and speed cops. Usually, the magnitude of that interference is low enough due to the narrow beam of your dish that you can avoid most of it, but if you're near an uplink site running serious power at Ku, then you're going to pick that up.

>Perhaps the best cure for multipath is to go to higher frequencies
>and use sharper antennas. Dish antennas normally have quite
>clean patterns. You can also improve the pattern by under-
>illuminating a dish, although this often isn't necessary.

Yes, under-illuminating a larger dish can help, but you have to be sure your feed has low sidelobes, dipoles with reflectors don't hack it, and pyramidal horns aren't all that clean either. What you want is a circular feed horn that's precisely matched to your dish. Adding a "fence" to the edge of the dish can help too. We've got a 2 foot high fence on an 8 foot dish we use for a link. Without it, we get so much spill from other emitters that the picture is trashed.

Multipath is always a concern with video because it's so visible as ghosting. Data is more resistant up to the point where the "eye" is corrupted too much for reliable slicing. Even a 0.5 degree beam diverges. In metroplexes, we often only have a clear window of 100 meters or less to pass the signal. Figure out how far back you can get and still not illuminate those buildings. It's not very far, so your link can't be very long.

Gary

SYNOPSIS OF ACT

Solar activity was very low. All the regions on the disk
have been quiet and stable. A new region was assigned today as
Region 7680 (S13E75).

Solar activity forecast: solar activity is expected to be
very low through the period.

The geomagnetic field has been at quiet levels for
the past 24 hours. High-latitudes experienced brief periods
of unsettled to active levels during nighttime sectors.

Geophysical activity forecast: the geomagnetic field is
expected to be unsettled through the period.

Event probabilities 27 feb-01 mar

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 27 feb-01 mar

A. Middle Latitudes
Active 10/10/20
Minor Storm 05/05/10
Major-Severe Storm 01/01/01

B. High Latitudes
Active 15/15/25
Minor Storm 10/10/15
Major-Severe Storm 05/05/05

HF propagation conditions were normal over all regions.
No changes are expected over the low and middle latitudes
during the next three days, through 01 March inclusive. High
latitudes may experience mild signal degradation on 01 March.

Total Events: 003 optical and x-ray.

EVENTS WIT

Date Begin Max End Xray Op Region Locn Sweeps/Optical Observations
------ ---- ---- ---- ---- -- ------ ------ ---
NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,

EPL = Eruptive Prominence on the Limb.

I have had the 2400 (it was ripped off) and it was a very good radio. It
has a very good front end and it has a lot of features. The negative side
is that the controls are hard to learn and to remember becasue a lot of
things are done with few buttons. It is also not very good for packet
because you don't have any eay way to control it. If you use the microphone
plug the speaker is on. You could plug the audio form the back and the
controlform the microphone and then you have two places. I would recommend
this radio very highly and especially if you are in an area with a lot of
strong signals. It has an extremely good front end and it is a very rugged
radio.

2243. Re: Keyboards at testing sessions

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-27 19:46:22 UTC
From: mahjmac@news.delphi.com
Message-ID: <2kqtae$cg5@news.delphi.com>
Source record: 270395

It would seem to me that being alowed to use a keyboard doesn't conform to the whole reason CW is required. It is used on an international scale, and if you are ever in any type of emergency or spontaneous situation where you need to receive code with no keyboard, then you would be worthless.

Mike

2244. Ohio/Penn DX Bulletin #149

SB DX @ ALLBBS $OPDX.149
Ohio/Penn DX Bulletin No. 149

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 149
BID: $OPDX.149
February 28, 1994
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, DL7VEE & DXNL, DF4RD, OH2BH, N3II, K3ZO, K4CEF & Southeastern Cluster Group, KJ4VH, WA4MCZ, WB4IUX, PI4KGL and IK5AAX for the following DX information.

3Y0PI, PETER I ISLAND (UPDATE). Last week OPDX forgot to list one of the 3Y0PI operators; Luis, XE1L, should have been included in the list. Thanks to Bill, WA4MCZ, for bringing it to our attention. As this bulletin was being prepared, information from Tony, WA4JQS, by telephone to Ada (Tony's mom), indicated that the 3Y team is now on South Shetland. The team, as of February 25th, are unable to fly out of South Shetlands at the moment due to fog and blizzard. (ed. GEEEE! How much can these guys endure?)

ACTIVITY ON THE SATELLITE (AO13). Look for the following stations on AO13: 5T5JC - 145.919/2100z, 8P6SM - 145.900/2242z, 9K2WA - 145.891/1602z 9Y4DG - 145.908/2339z, PY5BYE - 145.915/2310z, UN7CY - 145.937/1527z, VK4ABW - 145.889/0840z, VU2TS - 145.855/1708z and Z21HJ - 145.833/1445Z.

BV9P, PRATAS ISLAND. Word from Martti, OH2BH, is that preparations are proceeding just fine with no problems so far for the upcoming DXpedition. The targeted date is March 16 for 10-days. There are 14 operators scheduled to go, and the group may include limited foreign participation as well. Some detailed information may be released after Martti's visit to Taipei during this coming week.

MORE ON THE VOA STORY ABOUT "BY" OPS. Fred, K3ZO, who has just recently returned from Thailand where he operated as HS0ZAR, had doubts about the Voice of America (VOA) report that all BY hams have been rounded up and sent to labor camps. Fred stated he heard and worked plenty of BAs, BYs and BZs while in Thailand, so he decided to investigated the Voice of America broadcast and found the following information:

Here is the exact VOA text, which was based on a news item that was on the REUTERS news wire on February 16th: "Police in China have cracked down on the country's largest group of amateur radio operators, and have sent three of the group's leaders to labor camps.

The "Official China Business Times Today" (Wed. Fed. 16th) Identified the group as "Radio-Air-Salon", based in Henan Province (BY6). It said police have caught 61 members of the group -- which had effectively taken over some 27 radio channels.

The report said Radio-Air-Salon members often interrupted regular broadcasts with their own conversations and illegally listened in on restricted frequencies. It said the use of technical equipment to create chaos in the airwaves is a new type of illegal activity.......

Fred comments he has tried to work as many different Chinese stations as possible while he was in Thailand, but he never heard BY6. The ARRL reports that their information shows only one licensed amateur radio station in PRC, club station BY6SRA, licensed to the Shanxi Branch of the China Radio Sports Association (CRSA). CRSA is the IARU member society for China. Fred points out that the VOA broadcast only mentions that three members of one club were sent to "re-education camps", this is a far cry from "ALL BY's". This is a prime example of how RUMORS can spread like wildfires and blow things out of proportion Also, the press has often referred to all manners of radio hobbyists as "AMATEUR RADIO OPERATORS." The group of hobbyists mentioned in the broadcast may be engaging in SWL and CB type activities rather than actual amateur operations. Fred states such activities are widespread in Asia and has experienced pirate "CB" operations on the 40 meter band while operating from HS-land. So in summary, amateur radio is alive and well in PRC. Reports of activity this week by BY1QH on both 40 and 80 meters is proof. Also, Martti, OH2BH, was in Beijing recently and visited the operators and station of BY1PK. Martti stated things were just fine and no one is rounded up in the labor camps. As matter of fact, foreign operators may be licensed in PRC soon. (TNX to K3ZO, N8II and OH2BH)

P5, NORTH KOREA. During Martti's (OH2BH) recent visit to Beijing, where he was involved in some tennis tournament, he was able to communicate with some high level individuals not only from PRC administration but also from P5-land. "We are getting there, sooner or later," states Martti. (Keep Your Fingers Crossed!)

PACIFIC DXPEDITION (KC6/KH2/V63). JR6IQI and JK6UER are spending their honeymoon at various places in the Pacific, and will operate all bands both CW and SSB. Their itinerary is as follows: Belau - March 13-16 as KC6KT and KC6UA; Micronesia (V63) - March 16-18, call unknown; Guam (KH2) - March 18-20, KH2/JK6UER.

SU, EGYPT. The operation by SU2MT in the ARRL CW DX contest was by a West Coast DXer who is presently working in Egypt. More operations are planned for both CW and on the lower bands in order to make Zone 34 more accessible. Activity is also being planned for the ARRL SSB DX Contest on an all band operation for March 5-6.

TM50DAY CANCELLED. Willem, PA3BIZ, informs OPDX that the special event station in Normandy, France to commemorate the 50th anniversary of D-DAY as been cancelled. The two Dutch groups who have been planning the operation for more than a year were to be active from June 6-9, 1995. The group was issued the special call sign in July 1993. But since then the French license authorities have withdrawn the call sign stating they made a mistake by giving the group a two digit prefix. Meanwhile, there is word that the French operators might be organizing a special event station.

FAX YOUR DX INFORMATION NOW! Faxing is available Monday/Wednesday/Friday from 0430 to 2330z only. The number is 216-237-8208 and the FAX card is sharing the same phone line as BARF-80 BBS using a data/fax/phone switch.

Excerpts and distribution of The OPDX Bulletin are granted as long as OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to: aq474@cleveland.freenet.edu or send BitNet Mail to: aq474%cleveland.freenet@cunyvm or send PRODIGY Mail to: DFJH48A or send a message via packet to KB8NW @ WA8BXN.OH.USA.NA

2245. New IonCAP Package

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-27 20:27:53 UTC
From: jamestab@news.delphi.com
Message-ID: <2kqvo9$e24@news.delphi.com>
Source record: 270397

Skywave Analysis Package

CAPMAN -- Computer Assisted Prediction Manager

At last, a professional-quality IONCAP package that allows anyone to use the most advanced propagation routine interfacing with the ELNEC and MININEC antenna analysis gain patterns.

CAPMAN is the versatile menu/mouse driven IONCAP propagation package developed by Kangaroo Tabor Software and the prime author of IONCAP. CAPMAN delivers IONCAP input file construction and management, two integrated execute functions, the ability to view and manipulate huge output files and display of multicolor output graphs. The package allows you to customize it for your own station -- painlessly. A full-featured location database, indexed on both country name and call prefix, provides access to over 490 prefixes. Each database entry establishes associated information such as prefix, continent, country, city, geographic coordinates, CQ zone, ITU zone, a 900 character note pad, forward and reverse azimuths and distances, and the current local sunrise and sunset times. CAPMAN provides management of "input records" through the use of libraries. Input records may be created, revised, renamed, copied, deleted and combined into "input files" for performing custom predictions. An extensive on-line help system is provided and includes documentation from the IONCAP user's manual. Sunset and sunrise times, for any day, are accessible through the use of a calendar that also displays the current Local Mean, Local Civil and Greenwich Mean times.

The predicted Smoothed Sunspot Number may be configured and automatically set for the coming 12 months, providing quick one-step predictions. Many more features are provided in a "friendly" yet powerful "HF Analysis" package.

CAPMAN is completely fool-proof for the most advanced or beginning user. Your contacts and friends may be added to the library and run any time with a few keystrokes. A wide choice of antenna routines is available, to be configured for your station, or use the antenna analysis computed using ELNEC or MININEC. Numerous output methods, including a "Long distance" model for the DXer, are easily accessible.

The choices of output include MUF, FOT, S/N, Reliability, Service Probability, angles of take-off and arrival at receiver, S-meter units, field strength and modes of

propagation -- many more -- using the Es, E, F1 and F2-layers for the HF bands. Graphs of the predicted vertical ionogram, MUF, FOT and LUF are available.

This menu driven package features the newest "updated" full commercial version (LU9402) of IONCAP used by over 450 government agencies and commercial communications departments in the USA and more than 100 other countries.

This CAPMAN package is a 32 bit version and requires an IBM compatible 80386 or above.

For more information on the CAPMAN package contact:

: In article <1994Feb27.012117.11788@arrl.org> zlau@arrl.org (Zack Lau (KH6CP)) writes:

: Ha, Ha. The problem doesn't come with mounting the gunnplexer, or
: even aiming them, the problem is making sure they're on frequency
: and making rated power, and that the detector diodes haven't gone
: south. Most hams don't have the appropriate test equipment, or the
: skills to fabricate cheap alterative test equipment. Yeah, yeah,
: a radar detector can serve as a minimal activity checker, but that's
: not good enough to set up and maintain a legal and efficient link.

You could be right about that, Gary. Maybe you can no longer
expect people to fabricate blocks of wood to act as attenuators
to see which gunnplexers work the best. I have to admit I cheat
on this--if I stick a gunnplexer inside our screen room and close
the door, the attenuation to one of the lab benches is just right
for weak signal testing. Incidentally, if you are serious about
getting on 10 GHz, the March 10 GHz contest results in QST list
a number of stations on the band.

: >One of the tricks to making microwave gear resistant to
: >interference is to use horn antennas or waveguide in your
: >input circuit. They make a very low loss high pass filter.
: >The waveguide below cutoff effect is quite effective in
: >reducing low frequency interference.

: Sure, that helps, especially if you use *enough* waveguide. You
: need at least a 1/4 wave depth at the frequency of the *interference*

Where did you get this idea? I tried coupling two 10 GHz antennas,
a scalar dish feed with 9 dB of gain, and a 17 dBi horn, and didn't
see it on the spectrum analyzer (at least 70 dB of isolation below
110 MHz). I'd love to see a 1 x 1 x 2 inch 2 meter antenna that had
no meaningful attenuation (size of the feed without the scalar rings).

: to get meaningful attenuation. That is often in the 100 MHz region
: because of colocated FM broadcast transmitters. Remember you've got
: a simple diode detector in there that will respond to *any* RF of
: sufficient magnitude, and one of it's terminals is exposed on the
: outside of the gunnplexer. When the interference is at 10 GHz or
: higher, the waveguide doesn't act as a filter, of course, and there
: are thousands of 10 GHz emitters in LOS of a typical downtown rooftop

The exposed terminal problems is easily fixed--you shield it, just like
any other piece of electronic equipment you want to work next to an
antenna radiating more than a kW. Unfortunately, even the IF circuitry

of microwave gear has to be shielded, but this goes with the territory. But, shielding is trivial compared to trying to filter out a signal of nearly the same frequency. Thus, I don't expect people to have much luck using 219 MHz for receive on the same tower as a channel 13 broadcast station. As I said before, it doesn't make sense to try and do everything on one band--especially since we do have a selection to choose from.

I dunno--I got my special events QSL card last year from hams of
the American Sunbathers Association when they operated during
National Nude Weekend, and I thought it was a very tasteful card,
as nude QSL cards go. Soft focus, geometric diffusion--certainly
a MUCH more tasteful f
card than (sorry about the typo, my editor is off)
some of the ones I've received bearing buxom cartoon or real
babes.

In the almost 18 years I've been a ham, I have to confess that
no one has ever asked me what I was or wasn't wearing--
actually, they might have been shocked--which is CERTAINLY
more than I can say for the users of telephones! :) (hi hi)

Cheers...

Hello:
In the recent issues of QST, a company called Optoelectronics is advertising
test equipment for radios. One of the product is described as radio interceptor

What is this device used for ? I am asking this because, the advertisment says
it has applications in surveillance, and the equipment is supposed to be some
kinf of test equipment.

Hope someone here can explain the use of the equipment to me. Thanks.

: "The SERA repeater index may be published or reproduced in any form
: by any publication or electronic means to be distributed without
: charge. Appropriate credit must be given to the SERA Repeater Journal."

: SERA lists 10 southeastern states in the Journal, Georgia, Tennessee,
: Kentucky, Mississippi, North Carolina, South Carolina, Virginia, West
: Virginia, and including the T-MARC coordinated repeaters in Maryland,
: Delaware, and DC. *This* is where the ARRL gets their listings for these
: states. They don't pay a dime for them, or for the man-years of effort
: that went into the coordinations and database. They don't even have the
: courtsey to give SERA credit for the information.

Hey Gary,
That sounds great, can you get a copy of that in an electronic format for
the net? If so, that would be 20% of the states needed for Conway's
project from a non-ARRL source.

cheers,
Dan

From: adams@chuck.dallas.sgi.com
Message-ID: <CLwrFv.M1o@odin.corp.sgi.com>
Source record: 270406

Good on going discussion guys/girls.

1. Many complain about their penmanship. Looks like to me you can kill two birds with one stone. Get a book on penmanship (they still write those don't they?). Find the best style to copy and work on penmanship at the same time.

2. Start with cursive, don't DON'T print.

3. Practice not dotting i's and j's and don't cross the t's. This will come in handy later at higher speeds.

4. Use only half the horizontal width of the page.

5. Write small, remember t=d/v, where t is the time to write a critter, d is the distance pen/pencil must move, and v is the velocity at which you can move the pen/pencil over the writing surface. Use ballpoint, not pencil. Pencil drags too much. I hate ballpoint, as i am OF and prefer fountain pen, but I use ballpoint for copying code up to 40 or 45 wpm, if i must write it down.

I leave it as an exercise for the student to determine why each of the above is logical.

P.S. Someone complained that writing required you needed to know the next critter. If I remember correctly, it really doesn't matter. Maybe that's why you should copy behind. :-)

2258. SM406

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-28 05:07:54 UTC
From: Troyce@bio.tamu.edu
Message-ID: <Troyce-280294110754@idmb-secretary.tamu.edu>
Source record: 270410

I recently got a copy of SM406 and have a problem. It won't access the data files in the subdirectory, only if they are in the drive root directory. I.e., if I call up a file to be transmitted to be in practice, I have to enter the entire directory name along with the file name.

I've solved this temporarily by placing it all on a floppy, but would prefer to keep it on the HD. Has anyone else had this problem? Any suggestions? My older copy worked just fine.

2260. Help!!! Please :)

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-28 05:49:10 UTC
From: erik@elvis.umd.umich.edu
Message-ID: <2ks0km$icq@elvis.umd.umich.edu>
Source record: 270412

i Recently purchased a Kenwood r-5000 general coverage receiver. This machine was used so I didn't get a manual....I've figured out everything except for probably the most obvious feature....I cannot figure out how to set the clock, go figure. If anyone could give me at least a clue, it would be appreciated.

Thanks and 73,

EriK N8QLS

Society.

Special reminder

As next weekend is Central Coast Field Day at Wyong, please
note that the usual Sunday morning broadcast will go out at
the same time a day earlier on the Saturday...

Repeat, the morning broadcast will take place at 0030UT on
Saturday 26th February.

Of course, this is so ANARTS relay officers can go to the
Field Day along with the rest of the East Coast amateurs. Look
for us there, and say hello.

Back to normal the following Sunday ...

Change in 80m broadcast relay

Due to very poor propagation in this part of the cycle during
summer months, it has been decided to drop the 80m relay of
the cast from December to March inclusive. The relay will
resume on the first Sunday in April, which is the 3rd this
year.

This could be reviewed in future years, but should be in force until at least 1997, judging by the way the current solar cycle is progressing. The minimum for the cycle is estimated variously to come from late 1995 to around April 1996. This presumes that the cycle length will continue to shorten to under 10 years, the last cycle being 9.6 years in length. The decline of the present cycle is running three to eight months ahead of cycles 18, 19, and 21 (cycle 20 was of much lower amplitude).

Something good to remember -- the present cycle (cycle 22) reached its maximum in the record short interval of 2.8 years. Perhaps this next one will be similar.

Estimates courtesy of the IPS Radio and Space Services Solar-Geophysical Summary January 1994.

A reminder for the Gosford - Central Coast Field Day

Don't forget the Central Coast Field Day on 27th February, at the prestige venue of the Wyong Racecourse in Howarth St. Wyong.

There you will meet the committee of ANARTS -- Col VK2CTD, President, Jim VK2BQS, Vice-President, Alan VK2DPM, Treasurer, and Pat VK2JPA, Broadcast Officer, will be floating around somewhere with a video camera. (I am also a member of the Gladesville Amateur Radio Club Inc. specialising in ATV, and I have been told that I don't float! Pat)

Don't forget to enter the Morse contest ANARTS will be running again. It was such a success last year that it will be a feature of the stand again this year. Polish your sending and receiving skills and come along and participate in this most historic method of amateur digital transmission.

A late amendment to our previous announcement of a display of computer pictures. Murphy has struck again and the hard disk crashed rather permanently by the sounds of things, so we can't show the fractals and other images we had lined up for display. There's always next year.

See you there.

DARC HF RTTY Contest (cont.)

Date: February 19-20, 1994

Sponsored by Deutscher Amateur-Radio-Club e V.

Multipliers: Each DXCC/WAE country, and each USA state, and each call district in JA, VE, and VK, (NOT USA), regardless of band. (NO band multipliers). For USA stations, count only the FIRST QSO with a USA station as a DXCC/WAE country multiplier, regardless of band.

QSO points: Count 1 point for QSO with own country (States of USA are not counted as countries).

Count 2 points for QSO outside your own country, but within continent.

Count 3 points for QSO outside your own continent.

Final score: Total QSO points x total of multipliers.

Awards: To top stations in each class, country and district mentioned above.

Logs: Logs must contain: Date, Time UTC, Callsign, Message sent/received, name, US-state, first-time-mult prefix, and QSO points. Also required is a Summary sheet with a list of claimed multipliers. If entry is multi-op, please list names and callsigns of all ops. Comments are very much appreciated.

Deadlines; Part 1: May, 1994. Part 2: September 1, 1994.

Mail entry to:

IPS weekly report
---
11 - 17 February 1994

Issue no.: 07

Date of issue: 18 February 1994

Date 11 12 13 14 15 16 17
10cm 93 98 98 101 104 105 106
A 38 27 30 28 26 16 (12 estimated)
T 20 26 36 48 72 41 54

Summary of activity

Solar activity was mostly very low except for 13th and 17th February when activity was low.

The geomagnetic field at Learmonth (WA) from 11th to 15th was mostly unsettled to active with storm levels at periods on 11th, and minor storm levels at times on the 12th-15th.

Conditions on 16th were unsettled to active, and quiet to unsettled on 17th.

Ionospheric F2 critical frequencies at Sydney were near predicted levels 11th to partway through 13th when frequencies were firstly enhanced by up to 40 per cent, then depressed by up to 30 per cent after 1700UT. Frequencies on 14th to 15th ranged from near normal to up to 60 per cent enhanced, returning to near predicted values on 16th, then up to 15 per cent enhanced on 17th February. There was Sporadic E blanketing at 0800UT on 11th and some spread F during local night on 16th.

Forecast for the next week (18 - 24 February)

Solar : Low.

Geomagnetic: Active 20-23 February due to a coronal hole.

Ionospheric: Near predicted monthly values, MUFs are then expected to be depressed 15-20 per cent during the coronal hole activity.

2262. Errors in TNC2 firmware???

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-28 06:25:08 UTC
From: byon@csulb.edu
Message-ID: <2ks2o4$6tc@tern.csulb.edu>
Source record: 270414
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.digital.misc

I have recently been experimenting with TNC2 clones and had run across two peculiar "bugs" in the firmware of an MFJ 1278, and a tiny TNC2.

The first problem relates to when the TNC2 sends to the computer the "Change incoming stream" command ("|B" to switch to stream B, for example). It seems that when in command mode, the TNC set the output stream to be equal to the input stream whenever it sends the "cmd:" prompt (if, of course. the output stream was set to something else previously). So it you are in command mode in stream A, and send a "|b" to set the input stream to B, and press Enter, the tnc will respond with "|Bcmd:" to tell that the output stream should now ALSO be set to stream B. The problem is this: The stream switch is sent JUST before sending the cmd: prompt. So if you are on stream A in command mode, and type "|bcst<CR>" to set the input to stream B and get the status of all streams, the tnc will send the results, THEN the |B, then the new cmd: prompt. SO, the output of the cst request made on stream B will be sent to stream A. In fact, the results will show that the input stream is B, while the output stream is A! Of course, if you type another "cst<CR>", the results will be sent to the proper stream, because it has already been corrected. Do all TNC2's exhibit this feature?

The second problem is more major. I seems that when I am connected on two streams, and send text out on the first stream, and then switch to the second and do nothing, all output from the tnc is halted. For example, if I am connected on stream A and B to two bbs's, and I am currently on stream A, and I send "l<CR>|B" to list all files on the first bbs and then switch my input to the second bbs, the tnc will halt all output back to me. The results of the list command will come back to the tnc, and the tnc will receive them all internally, but will not send them to the computer....UNTIL I sent something to the tnc first. (Usually I send "^ck<CR>" to enter and then leave command mode. This will then allow all buffered data to be sent to me. However, it you do not send anything to the tnc, it will send nothing to you.

I have found these problems by using paKet 5.1. PaKet creates a different window for each of the tnc's streams, and pressing a shifted arrow key allows you to switch between the streams. When you do this, paKet sends a "|" and the stream identifier. Therefore, it is very easy to switch to another stream to view incoming data, without wanting to send anything, thus causing the second problem. And having entering a command in one window and having the output

return in another window (the first problem) was also easily spotted. I have reproduced these problems using a simple terminal, so they are not errors with paKet.

One other note. I have also played with some Kantronics Tnc. They do not appear to have the lockup problem, but have an even worse version of the first bug. The incoming stream sent from the Kan TNC's is only changed when data comes in from over the air, not from commands. So if I am on stream A, and switch to stream B, SEND a <CR>, (this would fix the TNC2 problem), and start sending commands, the tnc never send me the stream switch command, so all the feedback from my commands always goes to stream A, (or whatever the last stream to receive over the air was). This is very frustrating when using paKet!

Anyone have any comments on any of this? Has anyone else experienced this? Any ideas for solutions?

Greater than 2 MeV Electron Fluence for 27 FEB is: 1.6E+08

SYNOPSIS OF ACT

Solar activity was moderate. A M2 x-ray event occurred at
27/0920Z which was optically uncorrelated. A burst of 120 sfu
was observed on 2695 MHz at 27/0903Z. Region 7675 (S11W26) had
an associatted Type ii sweep between 26/2332Z and 26/2348Z. A
15 degree filament near S14E28 disappeared between 26/2350Z and
27/1540Z. A new region was assigned late yesterday as Region
7681 (S13W18).

Solar activity forecast: solar activity is expected to be
low through the period.

The geomagnetic field has been at quiet to unsettled
levels for the past 24 hours. A brief period of active levels
occurred during the nighttime sector at mid-latitudes while
active to major storms occurred at the high-latitudes.

Geophysical activity forecast: the geomagnetic field is
expected to be unsettled through the period.

Event probabilities 28 feb-02 mar

Class M 05/05/05
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 28 feb-02 mar

A. Middle Latitudes
Active 10/10/10
Minor Storm 05/05/05
Major-Severe Storm 01/01/01

B. High Latitudes
Active 15/15/15
Minor Storm 10/10/10
Major-Severe Storm 05/05/05

HF propagation conditions continued normal over all
regions. The M-class flare resulted in a moderate SWF over
sunlit paths. Affected areas may have included Africa, Europe,
Asia, and western Australia with maximum absorption centered
approximately near the south-eastern coast of Africa at about
S10 E40. All other areas experienced normal propagation.
Normal propagation is expected to persist over the next 72
hours, through 02 March inclusive.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

In your last attack you talked about staring at crotches; now it's manly men...

> of course you're afraid that some anal rententive might accuse you of
^^^^
Hmmm, there's that fixation again with certain body areas.

> promoting the jamming of HF maritime CW ops...)

I shouldn't have to post these frequencies - the information is readily available at any library. But this `TV-generation' doesn't know how to `look it up' so if you REALLY want them for CW practice email me and I'll certainly give them to you. This offer goes for everyone who's interested - the list is only about half of a page.

73 Angus,
Jeff NH6IL

Good Day!
Very glad to send to you these info from Russia,if you wont i always will be
send for DX News interest info about Russian IOTA ,becouse in 94 "RRC" used
callsigns: 4K2RRC,4K3RRC,4K4RRC,4K5RRC,4K3GW,4K3WQ,4K4DV and some 4K3/h.c.

* RA2F,Zeleny island,Baltic Sea Coast Group(54,5N 19,5E)
Team "Russian Robinson Club" will be activate from here in late
April about a week.
It looks like this will be New One according to IOTA program.
The team: Pino/I8IYW, Igor/ER2CQ, Larry/RW3GU, Larry/RW3GW,
Serge/RZ1OM, Larry/RA6YR.
Activity will be on 40-10 meter on CW,SSB and may be RTTY,AMTOR.
Contact RRC please via Inter Net Mail to: rv3gw@lttsco.lipetsk.su
* New prefix in Russian territory.
M.V.I. (ex 4J1) new R1MVA-R1MVZ or h.c./MVI
F.J.L. (ex 4K2) new R1FJA-R1FJZ or h.c./FJL
ANT (ex 4K1) new R1ANA-R1ANZ or h.c./ANT

2266. Callsign server info

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-28 12:27:27 UTC
From: jlw3@cec3.wustl.edu
Message-ID: <2ksnvf$l5e@bigfoot.wustl.edu>
Source record: 270418

Browsing through the callsign server, I came across the information blurb about how updated it is. cs.buffalo.edu is recent as QRZ!'s CDROM, April 1993. Canadian data is believed to be 1992, no information about club calls. The callsign server at pc.usl.edu 2000 is recent as of november 93, so a half-a-year more up-to-date. More information is available at either server; just type "info" at the prompt. BTW, the pc.usl.edu server was ported by N5KNX from KA2NRC's server source to the Pyramid OSx, so that explain's a previous post's revelation that the os's are similar.

Missed the original posting, but we've got electric fencing, and I offer these thoughts.
1. The fence in question appears to be using a battery-operated charger. See if you can convince the owner to move to an a-c line operated charger; the ones we use are basically pretty quiet.

2. With the a-c operated charger, the problems occur when the fence grounds itself through a bit of resistance, as through a bit of grass or honeysuckle, or worst of all, we used (briefly) a fencewire that was fine wire reinforced with plastic to give a "yellow ribbon" effect--the conductor broke at a couple of spots, and the plastic carbonized, giving a few inches of semiconductor carbon--fence wasn't obviously shorted, but the noise was terrible. Cure to all this: keep the fence absolutely clear of any paths to ground, and keep good, solid connections at splices (my wife insists on making single-point contacts with a pair of eye loops).

It'll work better to work _with_ the fence owner to keep the fence clear, than _against_ him by deliberately grounding it out. (Don't forget you've got some vulnerable coax.)

The following is a QST

A new interpretation of an old FCC rule may force repeater licensees to evict unwanted users.

*****
FCC SAYS REPEATER TRUSTEES CAN BAN USERS!

The Federal Communications Commission has told the attorney for a southern California radio club that the license holder to its repeater can kick any ham off the system that he deems unfit to use the machine. In doing so, the FCC seems have set the stage for a total re-evaluation of the way every repeater in the

nation is operated.
The issue of what rights a repeater licensee has over the control of his repeater came into sharp focus on February the 1st. This, in a letter of interpretation of Section 97.205, subpart E of the FCC Amateur Service rules. Section 97.205 E says in part -- and we quote -- "Limiting the use of a repeater to only certain user stations is permissible." That language has been on the books for years. Some repeater licensees are probably not aware the rule exists, much less understand the power it gives them. Moreover, until now the FCC has given repeater licensees wide latitude in its interpretation.
But a far narrower reading has now come as the result of a request for clarification sought by Attorney Sidney Radus, N6OMS of Orange, California. Radus is the attorney representing the Claremont Amateur Repeater Association in its fight against some unwanted users of its repeaters.
In preparation of a civil complaint against one user, Radus wrote to the FCC's Private Radio Bureau to find out exactly where his client stood in regard to Part 97.205 E. His inquiry was answered by Personal Radio Branch Chief John B. Johnston W3BE. Johnston is well versed in Part 97 regulatory matters in that he was the guiding hand that crafted the latest version. After quoting section 97.205 E, Johnston added the rule applies whether a repeater is coordinated as an "open" or "closed" repeater. In fact, Johnston says -- and again we quote -- " Rule 97.205 E without qualification, permits the individual responsible for proper operation of a repeater to limit the use of a repeater to certain user stations." -- end quote.
As previously reported, the legal action taken was to obtain a restraining order against Tim W. Seawolf of Quail Valley, California. Its now been learned that the Johnston letter was accepted by the civil court as evidence in the case. We will be covering that part of the story in greater detail next week.
But looked at on a much broader scale, this new interpretation of Section 97.205 E is the really important story. This, because it holds the potential of impacting on the way that every ham who uses a repeater to make contacts operates on the air. The FCC now seems to be saying that in effect, there is really no difference between an open or closed repeater. Rather that all repeaters are essentially closed and that the ability of anyone of us to operate through one is at the will and the whim of the person that holds the license to a given machine. In fact, Johnston letter goes even further than that. It just about mandates that repeater licensees act to ban anyone who in any way may cause the repeaters operation to violate any FCC part 97 rule.
This is truly a precedent setting regulatory interpretation by the FCC. Its one that will forever change the way in which all repeaters are operated and the way in which a repeater licensee is required to police his systems and control his user base.

TEXT OF FCC LET

FEDERAL COMMUNICATIONS COMMISSION
WASHINGTON D.C. 20554

Feb. 1, 1994

In Reply Refer To: 7230-A/1700C1

Mr. Sidney L. Radus
Orange, CA 92669

Dear Mr. Radus,

This is in response to your fax dated January 14, 1994 in which you request further response to your previous correspondence. Specifically, you request whether Section 97.205(e) permits owners of "open" repeaters to limit the use of their repeaters to certain users.

Section 97.205(e) states: '... Limiting the use of a repeater to only certain user stations is permissible.' The rule section applies whether a repeater is coordinated as an "open" or "closed" repeater.
Further, the rule applies without regard as to whether a repeater is coordinated at all. Rule 97.205(e), without qualification, permits the individual responsible for proper operation of a repeater to limit the use of a repeater to certain user stations.

I trust this is responsive to your concerns.

Sincerely,

John B. Johnston
Chief, Personal Radio Branch

*****
SPREAD SPECTRUM

The Commission has responded cautiously to a proposal to ease restrictions on spread spectrum signals on amateur frequencies. At their January 21st meeting, the ARRL's Board of Directors voted to ask the Commission to relax the restrictions. Whether that will actually happen remains to be seen. Ralph Haller, N4RH, Chief of the FCC's Private Radio Bureau, indicates the idea will have to be reviewed carefully.

"I would like to allow all the technologies that we possibly can. There are some concerns, our Field Bureau is concerned about being able to monitor the transmissions as a part of their functions. And so once again we need to balance that, but as far as I am concerned we should be as unintrusive as possible in our restrictions on amateur communications." Ralph Haller, N4RH, Chief of the FCC Private Radio Bureau.

Spread spectrum signals cannot be monitored with conventional FM receivers, and that's what concerns the Commission. Spread spectrum is popular with military agencies, because the transmissions are virtually impossible to monitor. Certain types of spread spectrum signals are legal on amateur frequencies above 420 MHz.

*****
VEC FILING EXT

The FCC has granted a request by the ARRL VEC for an extension of time to provide financial information concerning reimbursement arrangements to volunteer examiners. Last fall, the commission asked all VEC's to provide this information for 1993 with the end of January as the submission deadline.
But in filing for the time extension, the league said that its auditing firm will not have a financial report available until sometime in March. The FCC agreed and on January 26th it extended the filing deadline until March the 31st. The league says that it assumes that the extension would apply to all other VEC's as well.

*****
NEW AMSAT VIDEO

The first copy of the new AMSAT promotional video titled "Phase III-D - The Satellite For All Radio Amateurs" has been presented to the shows special guest, Senator Barry M. Goldwater K7UGA. The informal presentation was made on Sunday February 13 by Newsline producer Bill Pasternak, WA6ITF and Len Winkler, KB7LPW who hosts the nationally syndicated radio program Ham Radio and More. Ham Radio and More originates at the studios of KFNN radio in Phoenix. Bill was in Phoenix to appear as a guest on the show.
"Phase III-D - The Satellite For All Radio Amateurs" was taped on-location at the Goldwater ranch last July and is hosted by Roy Neal, K6DUE. The video is an updated version of an earlier tape known as "The Phase III-D Story" and includes a first glimpse of the latest Phase III-D satellite design.
VHS loaner tapes for radio club showing are available free of charge from AMSAT North America, 850 Sligo Ave, Suite 600, Silver Spring, MD 20910.

*****
STS-67 CREW NAMED

Two hams will fly on space shuttle flight STS 67 in early 1995. NASA has named Steve Oswald, KB5TSR as the flights commander. He will be joined by veteran SAREX operator Ron Parise, WA4SIR. Ron will serve as Payload Specialist on the flight.

*****
RTT

The RTT
sold to the American Digital Radio Society. Writing in the
January 1994 edition of the Journal, editor Dale Sinner, W6IWO
says that he was approached by the digital society with an offer
for it to take over publication of the journal. Sinner says that
he has been a strong supporter of the group since its inception,
That he believes strongly in its goals and its offer to take over
the Journal was one that he found it hard to refuse.
The principal goals of the American Digital Radio Society are
to advance the state of the art in digital technology as it
applies to Amateur Radio while at the same time wisest use of
amateur spectrum for digital modes. Its president is Warren
Sinsheimer W2RNE of Scarsdale, New York. Jim Mortensen, N2HOS
is the new Publisher of The RTT
Sinner remaining on as Editor in Chief.
For more information on the American Digital Radio Society
write them at Post Office Box 2465, New York City, NY 10185.

*****
DIGITAL CONFERENCE

A call has been issued for papers to be presented at the 13th
annual ARRL Digital Communications Conference. This year the
conference will be held August 19th to the 21st in Bloomington,
Minnesota. The theme for 1994 is Digital Communications -
Amateur Radio of Today and the Future. The deadline for
submissions is June 20th. Send them to Maty Weinberg at ARRL
Headquarters, 225 Main Street, Newington, Connecticut 06111.

*****
HOGERTY

Tom Hogerty, KC1J has been named as Special Projects Manager
at Headquarters. Building on his success in the clearance of the
DXCC backlog last year during his tenure as DXCC Manager, Tom's
first project will be to investigate how services to members are
rendered and ways in which they can be improved.
The ARRL has also named Bill Kennamer, K5FUV to replace
Hogerty as DXCC Manager. Kennamer who conducts QST
column joined the leagues staff in June of 1992.

*****
RARA

The 60th annual Rochester Hamfest and Computer Show combined
with the Atlantic Division New York State ARRL Convention
returns to the Monroe County Fairgrounds May 20-22. The show
includes 150 indoor exhibitors with up to date radio and
communications equipment, computer equipment and supplies. A
1000 vendor outdoor flea market adjoins the indoor selling area.

For information write to the Rochester Hamfest, 300 White Spruce Blvd, Rochester N.Y. 14623.

*****
DX - PET

In DX, we have a wrap up on the recent Peter One Island operation. The DXpedition team landed on the island January 29th. According to ON4UN, the entire landing took only three hours. Within that time forty trips back and forth with two helicopters were made to and from the ship.
While the landing itself was perfect, conversations overheard between WA4JQS and KA6V noted that there was some equipment that was damaged in transit. In particular, a satellite receiver looked as if it had been dropped by a crane and a PK-900 was almost destroyed.
Never the less the group decided to immediately erect all antennas and get all stations on the air. The operations began in a big way with stations on many bands with some DXers able to work 3Y0PI on several bands in just a matter of hours.
As of Saturday, February 5th, the report was the teams had worked over 20,000 QSOs and their goal was to make 100,000 QSOs from Peter One. The group is now in transit home. An exact QSO count should be announced shortly.

*****
DOOB HELPERS CHALLENGE NYC

The hams supplying communications support for ham radio runner Fred Doob, AA8FQ in the upcoming Los Angeles Marathon are challenging their New York City counterparts. The competition is for the total contacts that Fred can make while running the streets of the City of Angeles as compared to the number he made in last fall's New York City Marathon.
Why the challenge? Mainly because each contact that Fred makes will add several dollars to the grand total that Icom America will donate to the Los Angeles Childrens Cancer Research Fund. In his New York City run, AA8FQ raised twenty-five hundred dollars for the Sloan Kettering Memorial Cancer Center. Ed Walker, WA6MDJ is with the Baldwin Hills Amateur Radio Club. He says that Angelino hams will do a lot better.

"We're here in Los Angeles. We have more hams in the area than we ever have. I feel we can do it and we will do it. I think we will if not do almost twice as much as New York did and do it very easily." Ed Walker, WA6MDJ, from the Baldwin Hills Amateur Radio Club.

The Baldwin Hills club has arranged for AA8FQ to use wide area repeaters on 145.220, 146.670, 146.925, 445.925 and 447.325 MHz. Fred Doob will also be looking for QSO's on the national calling channel of 146.520. Walker is using Newsline to issue

the challenge to New York City. It will be interesting to hear
if the hams of the Big Apple accept.

*****

For this week, that's all from the Amateur Radio Newsline.

From: kenman@iastate.edu
Message-ID: <2ksunm$hmo@news.iastate.edu>
Source record: 270424

Hi All,

I upgraded from tech to advanced this last weekend and decided to listen in on 20 meters to get a feel for what goes on there. (I worked 15 mtrs since it was wide open to Europe!>.

There was some JERK that was running up and down the band causing all kinds of intentional interference: from belching and whistling to calling people sh*theads to keying on a frequency to disrupt a QSO.

He gave his call (obviously bogus) as W?OOQ. (don't remember what area he gave.)

Is this guy a fixture on 20 meters, or did I just get lucky?

73,
Ken

Well the purpose of the Morse test is to have a pool of trained operators in case of National Emergency (IE draftee radio operators in case of war). Since the Army today only trains those radio operators in Morse who will be doing signals intercept work (IE intelligence gathering), and since the Army trains these operators to copy by keyboard, it seems to me that keyboard copying at test sessions would be the preferred mode.

2274. ARRL--->Online Repeater directory

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-28 14:33:53 UTC
From: sbaker@umassmed.UMMED.EDU
Message-ID: <9402281434.AA12050@umassmed.UMMED.EDU>
Source record: 270426

The league publishes the repeater directory which it currently enjoys monopoly status. This must be enormously profitable for them as they are the sole source for such a directory, (maps aside). I wonder if they have priviledged access to this information by virtue of some role they play in the frequency coordination process?

If this is the case, then there is a conflict of interest issue here, and they should not in the repeatern directory business and frequency coordination business simultaneously if they will harrass competition.

As a league member, I feel it is the role of the League to encourage such innovations as an online repeater directory and callbook and should be providing these services to it's membership at cost or free themselves! I question how responsive the league is to the needs of the membership and to innovation. The league should evaluate it's programs for relevance and cost effectiveness. Is the code practice program worth the tremendous cost? Could that money be better spent setting up 800 lines for their BBS where code practice software could be downloaded? What would an internet RISC server cost to set up a server for callbook lookups, FTP, online repeater directories, packet gateway's, cellular vhf coordination (see 3/94 QST) etc.

Ham radio has entered an age where these sorts of things are where experimentation is happening and as the central organized body in the hobby, the ARRL is the only group in a position to do some of these things. If they don't take a leadership role, some other group will eventually emerge to do this and they will have lost their chance to serve the hobby.

* Morse Code Program for Suns Version 1.0
*
* Here is a little program I wrote that converts standard input
* to morse code. The Sun's bell is used to beep the code.
* The speed of the generated beeps vary, depending on the model of Sun.
* Speed can be changed with the optional first argument on the command
* line:
*
* % morse 2 # is twice as fast
* % morse 4 # is 3 times a fast
* % morse -2 # is twice as slow
* % morse -3 # is 3 times a slow
*
* It can be used across a network with remote shell:
*
* % rsh remote_host morse
*
* Or with pipes:
*
* % fortune | morse
```

```
*
* I have not include all the character set. ( ?, !, -, etc. )
* New characters can be easily added to the big case statement in main.
*
* I don't have time to work with this anymore so don't send the bugs to me.
* Send me better versions though :^)
*
* Oh yeah, this works on Suns version 3.2 of the UNIX4.3bsd operating system.
* compile with:
* % cc morse.c -o morse -lcurses -ltermcap
*
*
* Have fun!

Since no one responded to my query about DX Desktop, I assume no one on the net has used it.

Now, does any have experience with HamWindows? I am interested in version 3.0

Any praises, complaints, recommendations?

thanks and 73,

Mike, WA5CMI

In article <2kk7p0$t5d@zone4.ocunix.on.ca> (posted to rec.radio.scanner,rec.radio.amateur.misc on 25 Feb 1994 02:01:52 -0500), andrew@zone4.ocunix.on.ca (Andrew Cornwall) writes:

= Unfortunately, the only other place I've heard of the MVT-7100 being
= available is Javation, who's charging UK L385, which is way out of my
= league.
=
= Can anyone solve my dilemma?

Since you are in Canada, you might want to check out Radio Lorenz in Montreal. I bought my Yupiteru MVT-7100 from them and I was pleased with their service. Price was CDN $739.00 plus shipping (December 1993). I've included some additional information below from a file I occasionally send to people who ask about sources for the MVT-7100.

===
=== Notes on buying the Yupiteru MVT-7100 in North America ===
===

According to stuff I read in rec.radio.scanner and related newsgroups, unblocked Yupiteru MVT-7100 radios are available from Radio Lorenz in Montreal and Javiation in the U.K (see addresses and phone numbers below).

I opted to buy from Radio Lorenz primarily because I thought that warranty service, if needed, would be faster and cheaper. Including shipping and other considerations, the price from both suppliers appeared to be about the same. (Note that I'm in the U.S.; prices compared in mid-December, 1993). But as far as I can tell, any warranty a North American customer may obtain on the radio is provided by the retailer, and requires that you return the radio to the retailer for service. Lorenz offered a one-year warranty--if the radio breaks, purchaser ships it to Lorenz, and Lorenz ships it to the Canadian distributor (located in London, ON) for repairs. I assume, but do not know, that Javiation's policy is similar. I decided that it would be cheaper and faster to return the unit to Montreal than to the U.K.

Another advantage of buying the MVT-7100 from Lorenz is that they provide an AC adapter designed for operation in North America. Two reviews which have been posted to the net complain that the MVT-7100s supplied by Javiation come with an AC adaptor designed

for use at 100 V and cause the radio to run warm.

Lorenz supplies the regular Yupiteru manual, plus a reprint of one written by Jonathan Clough of Javiation. I'm not sure whether the reprint is identical to what you would get if you buy the radio from Javiation. It looks like something which may have been posted to a BBS and then printed out. I had no trouble learning how to use the radio from reprint in combination with the Yupiteru manual. The Yupiteru manual itself it not great, but not terrible either; I've seen much worse.

I was pleased with the friendly and helpful service I received from Helmut Lorenz. I asked him to ship the radio in a manner different than he was accustomed, and he was very cooperative.

Jonathan Clough of Javiation was also helpful when responding to my emailed inquiries.

C'mon...even an old CW-forever type like me knows that the "purpose" of
copying Morse at the exam is _to pass the exam_. Some people, once they're
on the air, develop proficiency in copying (and fewer in sending :-))
Morse. Others don't. But as a VE I'm supposed to assure that an applicant
can copy Morse at the required speed, by his answering seven of a set of
ten questions. Head copy, pencil, typewriter, computer, stone and
chisel...as long as _the applicant_ can understand enough Morse to answer
the questions (it's been a long time since we had somebody give us a minute
of solid copy), he meets the FCC requirement.

A if you read the editorial in this months QST you will find that the ARRL
is not in the coordnation business it only strongly supports coordination.
I really hate to take up for the ARRL but if they were in the coordinaton
business publishing a directory would be no more of a conflict of interest
than publishing the proceedings of a conference.

You may want to consult a Copyright Attorney.

Lists of facts, in general, are not copyrightable.

A particular method of organizing them or of selecting them
may be copyrightable, but can be easily overcome by
re-sorting or reformatting.

LANDLINE BBS OPEN TO ALL 916-262-1657
RACESBUL.315 RELEASE DATE: February 28, 1994

Subject: MGT - Semantics - Telecommunicator (5 of 7 parts)

TELECOMMUNICATOR is a more professional title adopted an increasing number of jurisdictions for what they used to call DISPATCHERS. They operate the public safety communications centers public safety answering points for Nine-One-One. They should be made aware periodically of your jurisdiction's RACES program and how Amateur Radio phone patches work.

RACES: The Radio Amateur Civil Emergency Service. The RACES is a program established by any jurisdiction's civil defense official by appointing a radio officer, preparing a RACES Plan, and training and utilizing Amateur Radio operators. The latter are screened for loyalty and reliability prior to taking and signing an oath. The RACES is not a condition; it is a program and unit of local government providing public safety communications. Thus the RACES is not a club, association, or self-governing body.

(Series authored by Stanly E. Harter, originally titled "From My Lookout". Edited for digital transmission. Continued.)

RACES Bulletins are archived on the Internet at ucsd.edu in hamradio/races and can be retrieved using FTP.

>a number of stations on the band.

Hickory or pine? :-)

I was thinking of more than some crude relative indications, though
that's often useful. But how many amateurs have frequency counters
or spectrum analyzers that cover 10 GHz, or even bolometer power meters?
I do, but I don't know many others who do. How many are setup to measure
sidelobe responses for optimum feed positioning? Even I'm not set up to
do that properly and have to depend on manufacturer antenna range data.
How about simple deviation measurements on megabaud+ signals at 10 GHz?
If we're going to build a reliable national network, we can't be cavalier
about what frequencies we're using, or the power and performance of our
systems.

Note, I'm not interested *at all* in DXing or contesting. I consider both
to be the antithesis to the cooperative model needed for effective networking.
While I respect the technical prowess some contesters have shown, I don't
think they have the proper mindset for designing reliable data links. By
their nature, DXing and contesting are based on freak conditions, that
once in a decade band opening, that unusual ducting condition, etc. They
are not concerned about 7x24 fade margins, or 99% link reliability. Their
goal is to *compete* with their compatriots for score rather than to
cooperate day in and day out to maintain stable links. I'd be happier
working with repeater owners whose concern for proper reliable coverage
zones and 7x24 reliable service to the user community are primary.

>no meaningful attenuation (size of the feed without the scalar rings).

Ok, if you're co-located with a Class B or C FM station, you're going
to have to deal with +50 dbW ERP signals, that's +80 dbm. Even if you get
70 db isolation, the signal at the diode is still +10 dbm. You've got
to do a lot better than that. A waveguide beyond cutoff is most effective
as a filter if it's length is 1/4-wave or greater at the frequency of
the interfereing source. (Attenuation doesn't get much better once you
pass the 1/4-wave depth.)

>The exposed terminal problems is easily fixed--you shield it, just like

>broadcast station. As I said before, it doesn't make sense to try
>and do everything on one band--especially since we do have a selection
>to choose from.

Yeah, though actually the tough problem is going to be with TV channel 11.
That's the low side image frequency of 219 MHz. That's solvable with high
side injection or an IF above 10.7 MHz. Note I've never said that we should
do it all on one band. Here in GA we're using a mixture of 222 MHz band and
430 MHz band systems in a checkerboard arrangement. I've got a bunch of
ex-GA Power data repeaters for the 902 MHz band as well. We should use what
works in a particular situation. My only point here has been that LOS 10 GHz
is unlikely to work in a *lot* of situations for various reasons that I've
already detailed in previous postings. Where it *does* work, then it could
be used if the microwave expertise is available to install and maintain
it. Otherwise we're going to have to look to other bands for solutions.

Look, we're finding that maintaining a 56 kb link is beyond the capabilities
of a major number of digital enthusiasts. And that's pretty simple stuff
that can be setup with just an ordinary station monitor and a scope. A
national network isn't going to be maintained by people with more general
knowledge or tools than that of the folks who maintain current digis and
voice repeaters. Most of them are totally lost when it comes to medium or

wideband data. It's *not* that hard, but we've got a major educational job ahead of us to get these people up to speed on these techniques. And we've got to offer packaged solutions that require a minimum of external test equipment to get up, and to maintain.

The ideal piece of equipment will have indicators built in to indicate that it's operating correctly with a clean on-frequency signal, with proper modulation, and with undegraded receive sensitivity and selectivity. Having a built in CNR meter and discriminator center meter are probably mandatory, but that's not enough. You also need at minimum a reference marker source of known frequency and strength to check transceiver frequency, stability, and sensitivity. When you have two widely separated link ends, you must be able to determine if the end you're at is operating correctly or not, or if the problem is at the other end. You can't count on having service personnel at both ends of a link simultaneously.

Gary

I am not trying to be insulting but the solution to this problem is quite simple. There are a lot of that model of Honda's on the road and in the junk yards.

Find out what part they replaced, go to the junk yard and get 2 or 3 of the same part so you have the extra parts when they fail and replace the new part with the old part.

Of course the League is a business - that is how an organization gets things done in this society.

> However, the League *IS* a business, whether you like it or not. Over

> they've sure got a lot of gall making lawyer noises to Yee claiming
> he's ripping them off when *they* are ripping off the efforts of the
> coordinating bodies.

(1) I sure would like to see a copy of the original letter making "lawyer noises".

(2) I wonder how many quadrillions of dollars the Lagues *actually* makes of this particular publication?

(3) Gathering and supplying the data is certainly part ofthe effort, but by no means all the effort that goes into compiling such a list and getting it published.

(4) Did you ever stop to think that there may even be somew *other* reason for objecting to misues of copyright? Like if you let one person abuse your copyright then others will try and maybe get away with it on that basis? I can certainly think of some crazies who would gladly abuse ARRL publications fortheir own purposes, both to make money and to just make anuisance of themselves - we have a few examples who post to these newsgroups for example.

(I'm not a lawyer so this is not a legal opinion :-)

You must tell me how to carry on a QSK conversation when you are running
your CQ tape Jeff. They must be *highly* skilled operators to do that - I
guess one of the lost arts of radio :-)

Strange that the SITOR and FAX stuff seems to be busy passing traffic all
the time even if you can only hear one side of it.

> referred to as "Ickum-pucky" (don't ask me)) Otherwise, cut off the
> connector.

I've never tried this, but at it's worst it means that you'll lobe-off
the connector (which is what you were going to do anyway) . . .

Try your standard, run-of-the-mill, $1.29/12oz can "Carburetor
Cleaner" spray (Gunk, STP, etc.) . . . it is great at disolving tarry
stuff. 1st get off as much of the Ickum-pucky as possible, then spray
on the carb cleaner; let it sit a while, then wipe-off with a trashy
cloth rag. Repeat until all traces are removed.

The only worry I have is if it will bother the coax jacket any. If it
does, then get your wire-cutter out, other wise you're done.

BTW:
Carb cleaner spray beats ANY commercial insecticide spray (like Raid,
etc.) for INSTANTLY killing bees and wasps. I had a wasp bothering me
in the garage once; it laughed at the "Raid Flying Insect" spray I
blasted at him. He landed on the window, I sprayed him with carb
cleaner, and he instantly fell to the floor begging me not to stomp on
him (sorry Charlie!). But I digress . . .

INTERNET.TST
FEBRUARY 14, 1994
ATTN: DISASTER VOLUNTEERS & MILITARY FAMILIES!!!

Our group is looking for volunteers to help expand our project nationwide! I have heard many things about Internet and have posted this message to see if there is anyone on the system that wants to help.. Please take a few minutes and read this bulletin. If you would like more information or wish to help, get in touch with me. I hope you find these 3 pages of information of interest.

Mr. Edward E. Addy
President, NACEC

W H A T I S N A C E C ?

NACEC is an acronym for "The North American Center for Emergency Communications". NACEC is not a radio club. It is a hybrid non-profit humanitarian organization. It was started under the name "Global Voices Project" on July 9th of 1992 and incorporated in Minnesota on January 8th 1993 for the purpose of improving the efficiency of other non-profit humanitarian organizations during their disaster aid and relief operations, throughout North America. NACEC also provides health and welfare communications assistance between members of the U.S. Armed Forces serving overseas and their families here at home.

The projects name was changed to The North American Center for Emergency Communications, (NACEC) by unanimous vote of The Board of Directors in August of 1993 to more closely reflect the projects mission and purpose.

W H Y W A S N A C E C F O R M E D ?
NACEC's mission is to provide communications support to aid

disaster victims and Military Families. NACEC was formed for one basic purpose "To reduce deaths and the amount of human suffering, through the development and implementation of an organization which can rapidly provide emergency communications.

Following a disaster this communications is essential to coordinate relief activities, greatly increasing the efficiency of disaster aid organizations to provide life saving aid to disaster victims.

We have found it to be a fact that without the ability to communicate you can not coordinate!

For Military Families the communications support provided comes in the form of NACEC's ability to handle health and welfare messages from its main high powered radio communications center, construction planned to start this Spring, to overseas military units located anywhere on the earth. NACEC is being developed and managed by the same people that provided The Desert Voices Project for Military Families during the Gulf War.

H O W D O E S N A C E C W O R K ?activity!

NACEC consists of two parts, the HQ/Communications Center and the Emergency Field Teams. The HQ/Communications center provides radio/wire integration (phone patch) and other HF radio, as well as tactical support services into a disaster area, when communications support is requested by a non-profit organization working to aid the victims of a disaster. This center is also used to provide HF radio support for Military Family health and welfare message and radio/wire integration traffic.

The Emergency Field Teams consist of two trained staff members. They are sent, when requested, into the disaster area with a complete commercial radio communications system. This system is used to tie together the many facets of the requesting organizations relief activities, while maintaining a very low draw on the pool of locally available volunteers within the disaster area. The field team also carries HF radio equipment that allows them to communicate back to NACEC's HQ/Communications center. When long distance telephone service is not available within the disaster area, the teams HF radio equipment is used to provide limited long distance service (via radio/wire integration), for the coordination and movement of relief supplies, materials, equipment and personnel into the disaster area.

H A S N A C E C E V E R B E E N O F S E R V I C E ?

YES! In July of 1993 assistance was requested by The Salvation Army who needed communications support for their flood relief operations in Des Moines, Iowa. Even though the project was not properly funded, 12 hours after the request was made an Emergency Field Team was in the disaster area to assist. The Team served for 10 days and helped The Salvation Army distribute over 53,000 meals to Victims and Volunteers. A very

successful and educational first mission for the project.

On January 17th of 1994 NACEC assistance was requested again by The Salvation Army. This time to handle message traffic into and out of the Southern California earthquake disaster area. Several hours after we began our mission, the American Red Cross requested and began using our services as well. This mission, handling dozens of messages, was successfully completed in only 72 hours. Long distance telephone service was then operating again into the disaster area. This mission was completed with the help of the Amateur Radio Community inside the disaster area. NACEC Emergency Communications Field Teams were not used in this mission.

N A T I O N W I D E, C O M M U N I T Y V O L U N T E E R
S E A R C H N O W U N D E R W A Y ! ! !

Volunteers are being sought from Communities throughout North America. These Volunteers will help get project information out into their Communities. In the event Military Families need our support in your community, or a disaster strikes your community, we will look to these volunteers for help with coordination. These volunteers will also help get fund raising information out to those persons and organizations within their communities that may wish to help with the project.

If you, or someone you know, would like to volunteer to help, send an SASE marked INTERNET.VIF and we will promptly send you a volunteer information form to complete.

I have set aside 50 of our January 1994 Newsletters for this internet test, if you wish a copy write INTERNET.NWS on the back of your SASE.

To receive both mark your SASE with INTERNET.VIF/NWS.

H O W T O R E A C H U S .

Direct all inquires to:
Mr. Edward E. Addy, President.

MicroSmith isn't shareware. It can be purchased from the ARRL for the
very reasonable price of $39.00. If anyone does find it on a BBS, please
notify the ARRL.

Ok, here's a trivial question that I don't know the answer to:

Where did the phrase, "I read you five by five." come from and what does it mean. I know it means good copy, but what specifically does it mean? Does it come from the early days of radar, of ham radio, of military aviation or what?

2301. Scanners on aircraft!

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-28 19:12:40 UTC
From: mike@garfield.csuohio.edu
Message-ID: <1994Feb28.191240.4993@news.csuohio.edu>
Source record: 270353

I have seen (and taken part in) several threads discussing the
issue of operating radio scanners aboard commercial aircraft.

The following two items have been reprinted without permission from
the Continental Airlines February 1994 issue of Profiles in-flight
magazine. The first item is from page 73 and describes what
electronic devices are/are not allowed on board. The second item
is an informative article from page 66. Enjoy.

ITEM 1

Continental Airlines' Profiles in-flight magazine, February 1994,
page 73 at the bottom by the radio symbol, verbatim:

"Certain electronic devices may not be used aboard the aircraft at
any time: TV's, radio receivers or transmitters (AM/FM, CB,
scanners, remote control toys, etc.) and cellular phones.
Permitted are: pagers, calculators, shavers, cameras, tape players
and recorders (audio or video), and bionics (hearing aids,
pacemakers, etc.). Additionally, electronic games, personal
computers and CD players may be used except during take-off and
landing (below 10,000 feet)."

ITEM 2

Continental Airlines' Profiles in-flight magazine, February 1994,
article on page 66 under "Continental Country":

Calling All Stations

"New rules govern the use of portable electronic devices in flight"

By Lockwood Tallman

People who fly frequently have noticed that cabin crews are
making some new announcements, such as, "Once airborne, you will
be advised when the use of approved devices is permitted," and "The
use of approved portable electronic devices is now permitted."
The announcements are the result of new rules designed to
limit the effects of electromagnetic interference (EMI) on the
aircraft's navigation and communication systems. It has long been
recognized that personal electronic devices can emit EMI, and for
this reason airlines have banned the use of AM/FM radios and
televisions by passengers on board.
But along with the electronics revolution has come a plethora

of portable devices that easily take to the air with travelers.
Both the Federal Aviation Administration (FAA) and the aircraft
manufacturers have provided information to the airlines concerning
this trend and the need to ensure that increased use of portable
electronics does not compromise the aircraft's own electronics.
On Continental aircraft, portable electronic devices fall into
three categories: items that can be used at any time; items that
should not be used during taxi, takeoff, climb, approach and
landing; and items that should not be used at any time aboard the
aircraft.
Authorized for use at any time are tape players/recorders
(video or audio), cameras, shavers, calculators, pagers,
wristwatches and medical devices, including hearing aids,
pacemakers and FAA-approved life-support systems.
Authorized for use while the aircraft is cruising (not during
taxi, takeoff, climb, approach and landing) are electronic games
and entertainment devices (such as "Gameboys"), personal computers
and compact disc players.
Not permitted at any time are televisions, radios, cellular
phones, CBs, remote-controlled toys or any other kind of
transmitter.
Televisions and telephones installed on board the aircraft are
acceptable because they have been installed with the required
shielding and have been FAA-approved specifically for inflight use.

Caption under photograph of a Continental 747 in this same article:

" 'Gameboys,' CD players and PCs should should be used only when
the aircraft is cruising - not on takeoff or landing, when the
electromagnetic interference they emit could interfere with the
aircraft's own electronics."

Well, from what I can tell, this pretty much eliminates radio
scanners, ham HT's (even if just receiving), and shortwave
receivers from being used on aircraft, at least on all Continental
flights. Depending on your airline, your mileage may vary.

Your best bet is to ask a flight attentant, or better yet the
captain herself/himself or appropriate pilot-in-charge.

Hope this helps.

Mike

Amen. Testees should be required to carve their copy into wood.
Failing that, hand-made slate tablets could be substituted.

In a real emergency you'd copy on the floor in your own blood!

>(1) I sure would like to see a copy of the original letter making "lawyer
>noises".

I have faxed a copy of the letter to the person asking for the letter
but am hesitant to post the letter. It would only fan the flames
without any substantial purpose. As a matter of policy, I have been
faxing all those who ask for a copy of the letter but if there are too
many people asking for it, some other arrangements may have to be
made.

The various threads on this issue have been highly supportive of the
idea of the online repeater directory. For this, I am grateful since
there are people appreciate the work that the volunteers and I have
put into the project. If the ARRL is listening, it can readily tell
the attitudes of most hams here. Further, a number of more
industrious hams are supplementing my efforts to the league and I am
grateful for their assistance. I am still hopeful of a satisfactory
resolution to this issue. As of this moment, I have not heard any
further news from the league itself.

>(old men) as XYM and see if they like that...:-)

My wife (N6YBV) was never terribly happy about this one either (especially
since she's *younger* than I am). A little digging through some commercial
CW abbreviation lists led to the the discovery of the abbreviation "YF",
which is what I use (and advocate, if for no other reason than it's shorter).

: None that are compatible with the Bird 43. We asked Bird and
: were told that they couldn't even do a custom slug.

I think I know why. A coupled-transmission-line directional coupler has a sensitivity limited by the physical length. And the sensitivity in inversely proportional to frequency -- That's why Bird slugs include a shunt capacitor to flatten out the frequency response. At low (HF) frequencies, I bet 50W is about the lowest sensitivity that is possible with the available line length.

: The proverbial friend of mine has two transformers. They are 110/220 VAC
: input, 50 VAC output and rated at 15 amps.

: He needs 25 volts, not 50. The obvious solution is to feed 110 into the
: 220 input windings.

: Question: Do we have to de-rate the output current to 7.5 amps?

For a given secondary current, when you halve the primary voltage
(to 110V), the input current doubles. So theoretically, if you want
to keep the primary current the same, you would have to reduce the
output current rating by 1/2.

However, I don't think it's quite that bad. After all, the secondary
current is the same -- the only difference is the I^2*R loss in the
primary. Also, most transformers are rated for 100% duty factor.
If you are using this to make a 12V power supply for a transmitter
with a 50% duty factor, you could probably use the full 15A or even
a bit more.

>offense to as a deragatory remark (I am not an "XYL" because I am only 22
>years old! :-)) The term is used to refer to one's wife...(because most

sheesh. at one time a slang in use had all married men as "old men" or "old boys" and their wives were the "old women".

a not-married woman was by default a Young Lady. those that are married became ex-young ladies...or would you prefer Old Woman.....YF is the current term i guess for wife and then there's SO....

the "old men" in the 50+ club today were still "old men" on the radio 50 years ago. that was the vernacular in force.

Those of you that get "That's Jake" in the funnies saw Jake Vest's idea of "Politically Correct Poker" today.....

Alpha Bravo alphabets

Here is a collection of alphabets of the Alpha Bravo Charlie Delta kind, variously known as radio alphabets, phonetic alphabets and spelling alphabets. This collection currently includes alphabets for the following languages:

English, French, German, Dutch, Flemish, Italian, Rumantsch, Slovak, Polish, Hungarian, Swedish, Finnish and Russian.

This posting is essentially a repeat of the one of 11th January.

My thanks to the many contributors, not all of whom are acknowledged below.

I can make no guarantee of accuracy of this information; indeed please send me any corrections or additions.

In my capacity as the editor of this collection I have no objection to the further electronic distribution of this posting in full in circumstances where it is likely to be of interest.

Comments in square brackets are my own.

Brian Kelk bck1@cl.cam.ac.uk
28 February 1994

***** ENGLISH *****

The NATO phonetic alphabet:

Alpha Bravo Charlie Delta Echo Foxtrot Golf Hotel India
Juliet Kilo Lima Mike November Oscar Papa Quebec Romeo
Sierra Tango Uniform Victor Whiskey Xray Yankee Zulu

[The same alphabet, modulo Alfa and Juliett, is approved by the International Civil Aviation Organization and the FAA. Dates from about 1956.
UK police use Indigo instead of India (?)]

Telecom B:

Alfred Benjamin Charles David Edward Frederick George Harry Isaac Jack King London Mary Nellie Oliver Peter Queen Robert Samuel Tommy Uncle Victor William Xray Yellow Zebra

[Found in Swedish, Dutch, Hungarian telephone directories.
A Swiss directory has: Andrew Charlie Lussy Queenie Sugar]

British A:

Amsterdam Baltimore Casablanca Denmark Edison Florida
Gallipoli Havana Italia Jerusalem Kilogramme Liverpool
Madagascar New_York Oslo Paris Quebec Roma Santiago Tripoli
Uppsala Valencia Washington Xantippe Yokohama Zurich

[An 'international' alphabet in a Dutch telephone directory
has: Danemark. A 'French' alphabet in a Hungarian directory
has: Cassablanka Danemark Que'bec Upsala Zu"rich]

Used by New York police:

Adam Boston Chicago Denver Edward Frank George Henry Ida
John King Lincoln Mary Nancy Ocean Peter Queen Robert Sam
Thomas Union Victor William X-ray Young Zebra

Used by police in San Diego, California:

Adam Boy Charles David Edward Frank George Henry Ida John
King Lincoln Mary Nora Ocean Paul Queen Robert Sam Tom Unit
Victor William Xray Yellow Zebra

Sometimes used by radio hams (unofficial):

America Boston Canada Denmark England France Germany
Honolulu India Japan Kilowatt London Mexico Norway Ontario
or Ocean Pacific Quebec Radio Santiago or Spain Tokyo United
Victoria Washington Xray Yokohama Zanzibar

[Much variation: Amsterdam, Brazil, Baltimore, Chile,
Finland, Greece, Guatemala etc]

The ARRL (American Radio Relay League) alphabet (1948):

Adam Baker Charlie David Edward Frank George Henry Ida John
king Lewis Mary Nancy Otto Peter queen Robert Susan Thomas
union Victor William x-ray young zebra

[Nowadays the ARRL endorses the NATO/ICAO alphabet]

Allied Services 1945:

Able Baker Charlie Dog Edward Fox George How Item Jig King
Love Mike Nan Oboe Peter Queen Roger Sugar Tape Uncle Victor
William X-ray Yoke Zebra

From a book entitled "The Complete Morse Instructor..." (1944):

able baker charlie dog easy fox george how item jig king
love mike nan oboe peter queen roger sugar tare uncle victor
william x-ray yoke zebra

[This one seems to have undergone quite a lot of evolution, with different branches of the U.S. armed forces using different versions. Entries also cited: affirm, cast, hypo, inter, negat, option, over, prep]

Western Union:

Adams Boston Chicago Denver Easy Frank George Henry Ida John King Lincoln Mary New_York Ocean Peter Queen Roger Sugar Thomas Union Victor William X-ray Young Zero

British Army 1927:

Ack Beer Charlie Don Edward Freddy George Harry Ink Johnnie King London Monkey Nuts Orange Pip Queen Robert Sugar Toc Uncle Vic William X-ray Yorker Zebra

Royal Navy 1917:

Apples Butter Charlie Duff Edward Freddy George Harry Ink Johnnie King London Monkey Nuts Orange Pudding Queenie Robert Sugar Tommy Uncle Vinegar Willie Xerxes Yellow Zebra

U.S. Army 1916:

Able Buy Cast Dock Easy Fox George Have Item Jig King Love Mike Nap Opal Pup Quack Rush Sail Tape Unit Vice Watch X-ray Yoke Zed

2310. Re: Medium range point-to-point digital links

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-28 21:29:04 UTC
From: zlau@arrl.org
Message-ID: <1994Feb28.212904.10734@arrl.org>
Source record: 270361

Seems to me that Gary wants to set up a digital network
the hard way, with only people interested in digital
networks.

In the Northeast, winning the 10 GHz contest depends
on *reliable* links. After all, there is the certainty
of rain and the even the possibility of snow... Dale
made his long haul contact and I didn't--with no
effect on the who won. Even my longest contact
was made over a path known to work well. This is
why I haul stuff up hiking trails, rather than
hoping for an opening....

I spend a lot of time in the contest setting up
schedules for *other* stations. Perhaps surprising
to beginners, but not veterans of 10 GHz work, is
relative inferiority of 2 meters once the antennas
are properly pointed. However, the best example
of cooperation was the hams who brought a carload of
gear to one ham's place--to force him to finish putting
together his SSB/CW station before the night was out!
Seems two hams got tired of hearing out it was "almost
ready" for the past 2 years.

I wasn't saying that you should have contesters
set up your links, much less maintain them. But,
why not get some hands on experience if its
available? People pay big $$ to get hands on
training with the guidance of experts. I know
in the Northeast there are groups willing to
help out beginners, especially if they are willing
to spend a weekend or two helping to make contacts.

Often, contesters just happen to have access to
the equipment you say is unavailable.

From what I've seen, HF contesters *do* have
a suitable mindset for setting up a network.
Perhaps not your idea of what a digital network
is suppose to be, but much of the Northeast
is linked by the Frankford Radio Club and the
Yankee Clipper Contest club (they are actually
competitors trying to wind DX contests).
They even have a source of funding--sales of CT
(one of the contest logging programs)
support the network. True, the network doesn't

support much more than DX spots and shortages
on a contest weekend, but if it suits the
needs of the people that spend their time building
and maintaining it....

Gary Coffman (gary@ke4zv.atl.ga.us) wrote:

(I wrote)
: >for weak signal testing. Incidentally, if you are serious about
: >getting on 10 GHz, the March 10 GHz contest results in QST list
: >a number of stations on the band.

: I was thinking of more than some crude relative indications, though
: that's often useful. But how many amateurs have frequency counters
: or spectrum analyzers that cover 10 GHz, or even bolometer power meters?
: I do, but I don't know many others who do. How many are setup to measure
: sidelobe responses for optimum feed positioning? Even I'm not set up to
: do that properly and have to depend on manufacturer antenna range data.
: How about simple deviation measurements on megabaud+ signals at 10 GHz?
: If we're going to build a reliable national network, we can't be cavalier
: about what frequencies we're using, or the power and performance of our
: systems.

: Note, I'm not interested *at all* in DXing or contesting. I consider both
: to be the antithesis to the cooperative model needed for effective networking.
: While I respect the technical prowess some contesters have shown, I don't
: think they have the proper mindset for designing reliable data links. By
: their nature, DXing and contesting are based on freak conditions, that
: once in a decade band opening, that unusual ducting condition, etc. They
: are not concerned about 7x24 fade margins, or 99% link reliability. Their
: goal is to *compete* with their compatriots for score rather than to
: cooperate day in and day out to maintain stable links. I'd be happier
: working with repeater owners whose concern for proper reliable coverage
: zones and 7x24 reliable service to the user community are primary.

: Look, we're finding that maintaining a 56 kb link is beyond the capabilities
: of a major number of digital enthusiasts. And that's pretty simple stuff
: that can be setup with just an ordinary station monitor and a scope. A
: national network isn't going to be maintained by people with more general
: knowledge or tools than that of the folks who maintain current digis and
: voice repeaters. Most of them are totally lost when it comes to medium or
: wideband data. It's *not* that hard, but we've got a major educational job
: ahead of us to get these people up to speed on these techniques. And we've
: got to offer packaged solutions that require a minimum of external test
: equipment to get up, and to maintain.

: The ideal piece of equipment will have indicators built in to indicate
: that it's operating correctly with a clean on-frequency signal, with
: proper modulation, and with undegraded receive sensitivity and selectivity.
: Having a built in CNR meter and discriminator center meter are probably
: mandatory, but that's not enough. You also need at minimum a reference
: marker source of known frequency and strength to check transceiver frequency,

: stability, and sensitivity. When you have two widely separated link ends,
: you must be able to determine if the end you're at is operating correctly
: or not, or if the problem is at the other end. You can't count on having
: service personnel at both ends of a link simultaneously.

2312. Suggestions for HF mobile?

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-28 22:15:24 UTC
From: ip@g8sjp.demon.co.uk
Message-ID: <762473724snz@g8sjp.demon.co.uk>
Source record: 270363

Folks,

While I have now been fiddling around with radios of one sort or another for over 20 years, I have yet to try working mobile (and this means actually 'on the move') from a car. I have a rig which I can use - and IC 726, and reckon that 100W should be fun.

What I'm looking for are suggestions as to which bands would be more appropriate to maintain reliable communication between my car and a fixed station at between 200 and 1000 miles range during this coming summer (in Europe).

I notice that the local store has a nice selection of single-band centre (oops center) loaded whip antennae, and I wouldn't mind buying one or two of those, if appropriate. I'm planning to mount whatever antenna on directly on the (fairly large and elevated) roof of my car.

Ideas?

Ken-

He wasn't the only one. Some of those who act that way, even have extra-class licenses!

The most frequent occurrence seems to be related to groups of Hams who think they have a private frequency. On 75, 40 and 20 meters, there are many "nets" that last most of 24 hours. There are Hams who leave their radio on a single frequency during all their waking hours. They use it like an intercomm with others in their group, and make all kinds of noise when an outsider comes on, thinking it is an unused frequency.

Then, there are those like your JERK, who make a sport out of moving onto frequencies known to be inhabited by the above. They engage in shouting matches and harrangues, effectively making the frequency useless.

I think all of these people are just bored, and have way too much time on their hands! In cases like these, there may be no harm done, other than hurt feelings. However, the JERKs don't stop there. Some of them take special delight in disrupting nets that serve a good purpose, especially in times of some disaster or other emergency.

These JERKs certainly give Ham Radio a bad name. What can you do about it? Nothing but get upset. I believe the best response is to ignore such a person. Let them have their way, and vacate a frequency if necessary. When you react to them, you're doing just what they want. The only way to "spoil their fun" is to refuse to play with them!

Byon-

If I understand you, the only real problem is that you can send two commands on one line. I didn't think you could do that, at least with a simple terminal program. A "|bcst" command may indeed do something strange, but I wouldn't consider it a "bug"!

Perhaps this is his way of keeping the user base small enough that the network he envisions can still provide at least mediocre service to each user. I don't see how that's going to happen with a national backbone of (only) 3000 56 kbps nodes otherwise.

> Perhaps surprising
> to beginners, but not veterans of 10 GHz work, is
> relative inferiority of 2 meters once the antennas
> are properly pointed.

I'm afraid this mindset among amateurs may be a serious hurdle to overcome. Popular wisdom has it that microwave is difficult and short range at best.

I find it interesting (and sad) that a similar "phobia" of short wavelengths was what resulted in amateurs getting shorter wavelengths, 200 meters and down, in the beginning. This time, however, amateurs seem to be on the wrong end of the opinion poll, even though ham radio presently has the spectral resources. Everyone else seems to have recognized where the value is. The commercial "vote" has been in for years which is why microwave has prevailed until just recently when fiber arrived.

Gary wrote:

Which I agree with completely and is why I'd hate to see plans for a national network limited or hamstrung by a 56kbps-at-vhf is enough mindset.
It's going to take optimum paths, economical hardware along with careful system planning and the development of supporting protocols in order to make something which is attractive to information-age amateurs. There's no question that it's difficult. I just don't see that we have an alternative if the hobby is to stay relevant.

I owned a repeater Map book by ArtSci for a few days till I sold it to
someone who valued it more than I did. My opinion: crude maps, with a
very small fraction of repeaters on it. I found the ARRL
book, for all its flaws, to be significantly better.

Read the opening pages of the repeater directory. The publication indicates that
certain data were obtained by other groups allowing the ARRL to use copyrighted
data wwith permission. It would seem that the League has agreed to those
groups being able to copyright their lists. I would guess that those groups
see it as worthwhile to have their data printed in the repeater directory,
and so allow for its use in the publication.

The OTs used to be able to carry on a QSO and a verbal conversation simultaneously!
But you're correct here. One possibility is the op might be working a ship on one band and the other xmtrs are still carrying the CQ tape. That's doubtful, though; at NMO, what ever was sent on the key went out over ALL 6 xmtrs simultaneously. That way ships calling us on another band wouldn't think we went to sleep (which is not hard to do at 3am).

>Strange that the SITOR and FAX stuff seems to be busy passing traffic all
>the time even if you can only hear one side of it.

Dunno. Those are new modes to me...
I'll deny I ever said this but I will grant you that other modes will eventually take over CW (oh my God - I don't believe I admitted that) - what will it take? As long as the shore stations keep monitoring the CW frequencies some ships will keep using that mode. So the decision rests entirely in the lap of the shore stations.

Subject: Could be anything (sure!)
return wabbit@it.was.a.tewibble.storm.edu
lookup ka2nrc ve6tcp nm1d elmer
#
Last update February 28 1994
#
This document may be distributed freely, as long as there is no financial
gain. I do not condone this list being used for generating junk mail or
other annoyances as this is not the purpose of the list. If you are in this
list and wish to keep your entry hidden, or that the name I have here be
changed (My middle name is Gregory and I am **** proud of it :-), I would
oblige.
#
Entries have this format (-> denotes separated by at least one tab):
Address (Name) -> Call -> Date
#
Address
Network address popularily used by individuals on the network. Although
the address that many news posters add may be incorrect, personal
e-mail contacts or updates are always placed first in the list of
duplicate calls. Removal of entries is by complaint only, so some
(mainly .EDU) may be invalid over time. For fidonet addresses I have
used the form #:#/#.#@<Fido>, try <name>@p#.f#.n#.z#.FidoNet.Org
(note address numbers in reverse order).
Name Name of the individual.
Call Call letters of the individual. Old and alternate calls '/' separated.
Date Last update YY-M[-D] International format.
A trailing * denotes not searched in call book for verification yet, @
means not found in call book (1987, 1992 CAN or 1993 US). ? after means
recheck may be required (eg. Call does not match name).
#
This list has a life of it's own, so references to *my* list will be ignored.

2332. Radio Amateurs on USENET List Feb 1994 Part 2 of 6

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-01 05:37:20 UTC
From: mark@ve6mgs.ampr.ab.ca
Message-ID: <1994Feb28.2@ve6mgs.ampr.org>
Source record: 270284
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,rec.answers,news.answers

```
Archive-name: radio/ham-radio/hams-on-usenet/part2
Last-modified: $Date: 94/37/28 22 37$
Version: $Revision: 1.03 $

I would be pleased to take any e-mail updates to this list, preferably at
hams-on-usenet@ve6mgs.ampr.ab.ca. I have split this list into six parts. This
Second part contains US call districts 1 and 2.

Ciao, 73 de VE6MGS/Mark -sk-

# Network address to name or call letters lookup table maintained by
# Mark Salyzyn VE6MGS mark@ve6mgs.ampr.org
#
# Only posting entries less than 12 months old (three terms at most educational
# institutions) in the interest of bandwidth savings. The entire list is
# accessible at the ftp sites and via the email server in any case.
#
# Please send corrections/deletions/additions hams-on-usenet@ve6mgs.ampr.ab.ca
# (if unreachable, mark@ve6mgs.ampr.org or adec23.UUCP!mark is ok). Many
# additions and updates are generated by collecting postings to the
# rec.radio.amateur.* hierarchy, so keep that in mind when requesting
# additions. Australian Amateur Radio Operators may prefer to mail their updates
# to Dean Davidson <ddavidso@metz.une.edu.au>. Any person interested in handling
# regional versions of the list are invited to drop me a note, I am
# particularily interested in representatives of non-english speaking regions
# so as to increase the accessibility of the list.
#
# archived for ftp @ ftp.cs.buffalo.edu:hams_on_usenet courtesy of
# Devon Bowen KA2NRC <bowen@cs.buffalo.edu>
# also ftp @ grivel.une.edu.au:pub/ham-radio/aus.radio/lists/internet.hams
# courtesy of Dean Davidson <ddavidso@metz.une.edu.au> for Australian hams.
# Canadian and US call sign lookups courtesy of the QRZ HAM Radio CDROM and
# thus thank Fred Lloyd <flloyd@qrz.com> for his efforts.
#
# email `grep' server reqnet@ve6mgs.ampr.ab.ca in the body of the message put
# a `lookup string ...'. email response limited to 10K. if you want to specify
# a return address, add optional `return user@host.domain'. For example:
# Subject: Could be anything (sure!)
# return wabbit@it.was.a.tewibble.storm.edu
# lookup ka2nrc ve6tcp nm1d elmer
#
# Last update February 28 1994
#
# This document may be distributed freely, as long as there is no financial
```

gain. I do not condone this list being used for generating junk mail or
other annoyances as this is not the purpose of the list. If you are in this
list and wish to keep your entry hidden, or that the name I have here be
changed (My middle name is Gregory and I am **** proud of it :-), I would
oblige.
#
Entries have this format (-> denotes separated by at least one tab):
Address (Name) -> Call -> Date
#
Address
Network address popularily used by individuals on the network. Although
the address that many news posters add may be incorrect, personal
e-mail contacts or updates are always placed first in the list of
duplicate calls. Removal of entries is by complaint only, so some
(mainly .EDU) may be invalid over time. For fidonet addresses I have
used the form #:#/#.#@<Fido>, try <name>@p#.f#.n#.z#.FidoNet.Org
(note address numbers in reverse order).
Name Name of the individual.
Call Call letters of the individual. Old and alternate calls '/' separated.
Date Last update YY-M[-D] International format.
A trailing * denotes not searched in call book for verification yet, @
means not found in call book (1987, 1992 CAN or 1993 US). ? after means
recheck may be required (eg. Call does not match name).
#
This list has a life of it's own, so references to *my* list will be ignored.
#

Last-modified: $Date: 94/37/28 22 37$
Version: $Revision: 1.03 $

I would be pleased to take any e-mail updates to this list, preferably at
hams-on-usenet@ve6mgs.ampr.ab.ca. I have split this list into six parts. This
Third part contains US call districts 3 and 4.

Ciao, 73 de VE6MGS/Mark -sk-

# Network address to name or call letters lookup table maintained by
# Mark Salyzyn VE6MGS mark@ve6mgs.ampr.org
#
# Only posting entries less than 12 months old (three terms at most educational
# institutions) in the interest of bandwidth savings. The entire list is
# accessible at the ftp sites and via the email server in any case.
#
# Please send corrections/deletions/additions hams-on-usenet@ve6mgs.ampr.ab.ca
# (if unreachable, mark@ve6mgs.ampr.org or adec23.UUCP!mark is ok). Many
# additions and updates are generated by collecting postings to the
# rec.radio.amateur.* hierarchy, so keep that in mind when requesting
# additions. Australian Amateur Radio Operators may prefer to mail their updates
# to Dean Davidson <ddavidso@metz.une.edu.au>. Any person interested in handling
# regional versions of the list are invited to drop me a note, I am
# particularily interested in representatives of non-english speaking regions
# so as to increase the accessibility of the list.
#
# archived for ftp @ ftp.cs.buffalo.edu:hams_on_usenet courtesy of
# Devon Bowen KA2NRC <bowen@cs.buffalo.edu>
# also ftp @ grivel.une.edu.au:pub/ham-radio/aus.radio/lists/internet.hams
# courtesy of Dean Davidson <ddavidso@metz.une.edu.au> for Australian hams.
# Canadian and US call sign lookups courtesy of the QRZ HAM Radio CDROM and
# thus thank Fred Lloyd <flloyd@qrz.com> for his efforts.
#
# email `grep' server reqnet@ve6mgs.ampr.ab.ca in the body of the message put
# a `lookup string ...'. email response limited to 10K. if you want to specify
# a return address, add optional `return user@host.domain'. For example:
# Subject: Could be anything (sure!)
# return wabbit@it.was.a.tewibble.storm.edu
# lookup ka2nrc ve6tcp nm1d elmer
#
# Last update February 28 1994
#
# This document may be distributed freely, as long as there is no financial
```

gain. I do not condone this list being used for generating junk mail or
other annoyances as this is not the purpose of the list. If you are in this
list and wish to keep your entry hidden, or that the name I have here be
changed (My middle name is Gregory and I am **** proud of it :-), I would
oblige.
#
Entries have this format (-> denotes separated by at least one tab):
Address (Name) -> Call -> Date
#
Address
Network address popularily used by individuals on the network. Although
the address that many news posters add may be incorrect, personal
e-mail contacts or updates are always placed first in the list of
duplicate calls. Removal of entries is by complaint only, so some
(mainly .EDU) may be invalid over time. For fidonet addresses I have
used the form #:#/#.#@<Fido>, try <name>@p#.f#.n#.z#.FidoNet.Org
(note address numbers in reverse order).
Name Name of the individual.
Call Call letters of the individual. Old and alternate calls '/' separated.
Date Last update YY-M[-D] International format.
A trailing * denotes not searched in call book for verification yet, @
means not found in call book (1987, 1992 CAN or 1993 US). ? after means
recheck may be required (eg. Call does not match name).
#
This list has a life of it's own, so references to *my* list will be ignored.
#

2334. Radio Amateurs on USENET List Feb 1994 Part 4 of 6

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-01 05:37:43 UTC
From: mark@ve6mgs.ampr.ab.ca
Message-ID: <1994Feb28.4@ve6mgs.ampr.org>
Source record: 270286
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,rec.answers,news.answers

```
Archive-name: radio/ham-radio/hams-on-usenet/part4
Last-modified: $Date: 94/37/28 22 37$
Version: $Revision: 1.03 $

I would be pleased to take any e-mail updates to this list, preferably at
hams-on-usenet@ve6mgs.ampr.ab.ca. I have split this list into six parts. This
Fourth part contains US call districts 5 and 6.

Ciao, 73 de VE6MGS/Mark -sk-

# Network address to name or call letters lookup table maintained by
# Mark Salyzyn VE6MGS mark@ve6mgs.ampr.org
#
# Only posting entries less than 12 months old (three terms at most educational
# institutions) in the interest of bandwidth savings. The entire list is
# accessible at the ftp sites and via the email server in any case.
#
# Please send corrections/deletions/additions hams-on-usenet@ve6mgs.ampr.ab.ca
# (if unreachable, mark@ve6mgs.ampr.org or adec23.UUCP!mark is ok). Many
# additions and updates are generated by collecting postings to the
# rec.radio.amateur.* hierarchy, so keep that in mind when requesting
# additions. Australian Amateur Radio Operators may prefer to mail their updates
# to Dean Davidson <ddavidso@metz.une.edu.au>. Any person interested in handling
# regional versions of the list are invited to drop me a note, I am
# particularily interested in representatives of non-english speaking regions
# so as to increase the accessibility of the list.
#
# archived for ftp @ ftp.cs.buffalo.edu:hams_on_usenet courtesy of
# Devon Bowen KA2NRC <bowen@cs.buffalo.edu>
# also ftp @ grivel.une.edu.au:pub/ham-radio/aus.radio/lists/internet.hams
# courtesy of Dean Davidson <ddavidso@metz.une.edu.au> for Australian hams.
# Canadian and US call sign lookups courtesy of the QRZ HAM Radio CDROM and
# thus thank Fred Lloyd <flloyd@qrz.com> for his efforts.
#
# email `grep' server reqnet@ve6mgs.ampr.ab.ca in the body of the message put
# a `lookup string ...'. email response limited to 10K. if you want to specify
# a return address, add optional `return user@host.domain'. For example:
# Subject: Could be anything (sure!)
# return wabbit@it.was.a.tewibble.storm.edu
# lookup ka2nrc ve6tcp nm1d elmer
#
# Last update February 28 1994
#
# This document may be distributed freely, as long as there is no financial
```

gain. I do not condone this list being used for generating junk mail or
other annoyances as this is not the purpose of the list. If you are in this
list and wish to keep your entry hidden, or that the name I have here be
changed (My middle name is Gregory and I am **** proud of it :-), I would
oblige.
#
Entries have this format (-> denotes separated by at least one tab):
Address (Name) -> Call -> Date
#
Address
Network address popularily used by individuals on the network. Although
the address that many news posters add may be incorrect, personal
e-mail contacts or updates are always placed first in the list of
duplicate calls. Removal of entries is by complaint only, so some
(mainly .EDU) may be invalid over time. For fidonet addresses I have
used the form #:#/#.#@<Fido>, try <name>@p#.f#.n#.z#.FidoNet.Org
(note address numbers in reverse order).
Name Name of the individual.
Call Call letters of the individual. Old and alternate calls '/' separated.
Date Last update YY-M[-D] International format.
A trailing * denotes not searched in call book for verification yet, @
means not found in call book (1987, 1992 CAN or 1993 US). ? after means
recheck may be required (eg. Call does not match name).
#
This list has a life of it's own, so references to *my* list will be ignored.
#

2335. Radio Amateurs on USENET List Feb 1994 Part 5 of 6

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-01 05:37:53 UTC
From: mark@ve6mgs.ampr.ab.ca
Message-ID: <1994Feb28.5@ve6mgs.ampr.org>
Source record: 270287
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,rec.answers,news.answers

```
Archive-name: radio/ham-radio/hams-on-usenet/part5
Last-modified: $Date: 94/37/28 22 37$
Version: $Revision: 1.03 $

I would be pleased to take any e-mail updates to this list, preferably at
hams-on-usenet@ve6mgs.ampr.ab.ca. I have split this list into six parts. This
Fifth part contains US call districts 7, 8 and 9.

Ciao, 73 de VE6MGS/Mark -sk-

# Network address to name or call letters lookup table maintained by
# Mark Salyzyn VE6MGS mark@ve6mgs.ampr.org
#
# Only posting entries less than 12 months old (three terms at most educational
# institutions) in the interest of bandwidth savings. The entire list is
# accessible at the ftp sites and via the email server in any case.
#
# Please send corrections/deletions/additions hams-on-usenet@ve6mgs.ampr.ab.ca
# (if unreachable, mark@ve6mgs.ampr.org or adec23.UUCP!mark is ok). Many
# additions and updates are generated by collecting postings to the
# rec.radio.amateur.* hierarchy, so keep that in mind when requesting
# additions. Australian Amateur Radio Operators may prefer to mail their updates
# to Dean Davidson <ddavidso@metz.une.edu.au>. Any person interested in handling
# regional versions of the list are invited to drop me a note, I am
# particularily interested in representatives of non-english speaking regions
# so as to increase the accessibility of the list.
#
# archived for ftp @ ftp.cs.buffalo.edu:hams_on_usenet courtesy of
# Devon Bowen KA2NRC <bowen@cs.buffalo.edu>
# also ftp @ grivel.une.edu.au:pub/ham-radio/aus.radio/lists/internet.hams
# courtesy of Dean Davidson <ddavidso@metz.une.edu.au> for Australian hams.
# Canadian and US call sign lookups courtesy of the QRZ HAM Radio CDROM and
# thus thank Fred Lloyd <flloyd@qrz.com> for his efforts.
#
# email `grep' server reqnet@ve6mgs.ampr.ab.ca in the body of the message put
# a `lookup string ...'. email response limited to 10K. if you want to specify
# a return address, add optional `return user@host.domain'. For example:
# Subject: Could be anything (sure!)
# return wabbit@it.was.a.tewibble.storm.edu
# lookup ka2nrc ve6tcp nm1d elmer
#
# Last update February 28 1994
#
# This document may be distributed freely, as long as there is no financial
```

gain. I do not condone this list being used for generating junk mail or
other annoyances as this is not the purpose of the list. If you are in this
list and wish to keep your entry hidden, or that the name I have here be
changed (My middle name is Gregory and I am **** proud of it :-), I would
oblige.
#
Entries have this format (-> denotes separated by at least one tab):
Address (Name) -> Call -> Date
#
Address
Network address popularily used by individuals on the network. Although
the address that many news posters add may be incorrect, personal
e-mail contacts or updates are always placed first in the list of
duplicate calls. Removal of entries is by complaint only, so some
(mainly .EDU) may be invalid over time. For fidonet addresses I have
used the form #:#/#.#@<Fido>, try <name>@p#.f#.n#.z#.FidoNet.Org
(note address numbers in reverse order).
Name Name of the individual.
Call Call letters of the individual. Old and alternate calls '/' separated.
Date Last update YY-M[-D] International format.
A trailing * denotes not searched in call book for verification yet, @
means not found in call book (1987, 1992 CAN or 1993 US). ? after means
recheck may be required (eg. Call does not match name).
#
This list has a life of it's own, so references to *my* list will be ignored.
#

2336. Radio Amateurs on USENET List Feb 1994 Part 6 of 6

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-01 05:38:05 UTC
From: mark@ve6mgs.ampr.ab.ca
Message-ID: <1994Feb28.6@ve6mgs.ampr.org>
Source record: 270288
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,rec.answers,news.answers

```
Archive-name: radio/ham-radio/hams-on-usenet/part6
Last-modified: $Date: 94/38/28 22 38$
Version: $Revision: 1.03 $

I would be pleased to take any e-mail updates to this list, preferably at
hams-on-usenet@ve6mgs.ampr.ab.ca. I have split this list into six parts. This
Sixth part contains whatever is left over ... Canadian, Down under
and spots left here and there over the globe. Some Amateur Radio Related email
services are also itmeized at the bottom of the list.

Ciao, 73 de VE6MGS/Mark -sk-

# Network address to name or call letters lookup table maintained by
# Mark Salyzyn VE6MGS mark@ve6mgs.ampr.org
#
# Only posting entries less than 12 months old (three terms at most educational
# institutions) in the interest of bandwidth savings. The entire list is
# accessible at the ftp sites and via the email server in any case.
#
# Please send corrections/deletions/additions hams-on-usenet@ve6mgs.ampr.ab.ca
# (if unreachable, mark@ve6mgs.ampr.org or adec23.UUCP!mark is ok). Many
# additions and updates are generated by collecting postings to the
# rec.radio.amateur.* hierarchy, so keep that in mind when requesting
# additions. Australian Amateur Radio Operators may prefer to mail their updates
# to Dean Davidson <ddavidso@metz.une.edu.au>. Any person interested in handling
# regional versions of the list are invited to drop me a note, I am
# particularily interested in representatives of non-english speaking regions
# so as to increase the accessibility of the list.
#
# archived for ftp @ ftp.cs.buffalo.edu:hams_on_usenet courtesy of
# Devon Bowen KA2NRC <bowen@cs.buffalo.edu>
# also ftp @ grivel.une.edu.au:pub/ham-radio/aus.radio/lists/internet.hams
# courtesy of Dean Davidson <ddavidso@metz.une.edu.au> for Australian hams.
# Canadian and US call sign lookups courtesy of the QRZ HAM Radio CDROM and
# thus thank Fred Lloyd <flloyd@qrz.com> for his efforts.
#
# email `grep' server reqnet@ve6mgs.ampr.ab.ca in the body of the message put
# a `lookup string ...'. email response limited to 10K. if you want to specify
# a return address, add optional `return user@host.domain'. For example:
# Subject: Could be anything (sure!)
# return wabbit@it.was.a.tewibble.storm.edu
# lookup ka2nrc ve6tcp nm1d elmer
#
# Last update February 28 1994
```

#
This document may be distributed freely, as long as there is no financial
gain. I do not condone this list being used for generating junk mail or
other annoyances as this is not the purpose of the list. If you are in this
list and wish to keep your entry hidden, or that the name I have here be
changed (My middle name is Gregory and I am **** proud of it :-), I would
oblige.
#
Entries have this format (-> denotes separated by at least one tab):
Address (Name) -> Call -> Date
#
Address
Network address popularily used by individuals on the network. Although
the address that many news posters add may be incorrect, personal
e-mail contacts or updates are always placed first in the list of
duplicate calls. Removal of entries is by complaint only, so some
(mainly .EDU) may be invalid over time. For fidonet addresses I have
used the form #:#/#.#@<Fido>, try <name>@p#.f#.n#.z#.FidoNet.Org
(note address numbers in reverse order).
Name Name of the individual.
Call Call letters of the individual. Old and alternate calls '/' separated.
Date Last update YY-M[-D] International format.
A trailing * denotes not searched in call book for verification yet, @
means not found in call book (1987, 1992 CAN or 1993 US). ? after means
recheck may be required (eg. Call does not match name).
#
This list has a life of it's own, so references to *my* list will be ignored.
#

> their _own format_, is free to do so

On second look, it appears that you and I may be in "violent agreement" after all, John. It's this business about "format" that appears to be at the heart of the matter.

I don't think anyone has yet contested the fact that the *data* iteself is not protected by copyright law. Several folks have cited a precendent in which the court found in favor of a company that had been sued by a telephone company for republishing information from its white pages, even though this information included errors that were specifically designed to uncover this kind of activity. Given this, I imagine that the League would be hard pressed to win a court case, even if it could demonstrate that the *data* had been lifted directly from their directory.

So the question remains: exactly how does the *format* of N2JWQ's compilation infringe on that of the ARRL directory? It's true that the data items in the Directory are a subset of N2JWQ's database, but this doesn't seem like an infringement to me since all of these data items could be independently verified by just about anybody with an HT. And while I readily recognize that the League deserves credit for the resources they devoted to compiling this data, I don't believe this *effort* is protected by copyright law either.

Based on my own inspection of N2JWQ's data, the only potential infringement I can find is the codification scheme used to describe a repeater's class of access (e.g. o=open, c=closed, etc.) While I would consider this nit-picking on the part of the League, it really isn't worth worrying about since it would be a trivial matter to convert these codes to some other representation.

Even if I put aside my irritation with the League for impeding a project that would add tremendous value to the usability of this data, I still can't understand exactly how the League perceives that N2JWQ has infringed on its copyright. If I were to photocopy their Directory and sell my version for $4 instead of $6, then I think they'd have a damn good case against me. But from my point of view, nothing like that has occurred here.

While it is possible to do, my question is why? would you want to do it?

After all, Ham radio is just that, Radio! Tieing it into hardlines in
that matter seems to stray from the topic of the hobby. Pointing mainly
at the matter of RADIO to RADIO digital communication. Thats the sport
of things. THink about it.
Just my opinion of course! :)

2343. Digest of Articles - QST Jan 1993 (Long - 38k)

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-01 11:56:01 UTC
From: wvanhorn@magnus.acs.ohio-state.edu
Message-ID: <2kvagh$7gq@charm.magnus.acs.ohio-state.edu>
Source record: 270295

Starting with the January, 1993 issue, digests of articles published in QST Magazine are being prepared, and will be posted on this newsgroup. They will appear approximately one per week through the 1993 issues and until they "catch up" with the current 1994 month. Subsequent issues will be posted monthly, as published.

It is hoped that others will volunteer to post similar digests of the other ham technical publications such as QEX, CQ, 73, COMMUNICATIONS QUARTERLY, RTTY JOURNAL, et al. Especially desirable would be digests of publications in other countries, such as the RSGB RADIO COMMUNICATIONS and ham magazines in Europe, Japan, Australia, and other countries around the world. We English speakers would especially enjoy them if they were translated into our language, but they would also be valuable additions to the world's knowledge if they were posted in the language of origin. Who knows? Some bi-lingual ham somewhere might translate them into English and re-post them.

Worldwide communications are getting better and better. The time has come to make the world's amateur press available to all hams throughout the world!

The major value of digests or abstracts is to give readers sufficient information to decide whether to obtain a copy of the full text. If any U.S. reader wants a copy of an article in QST, please inquire of other hams in your own neighborhood. Many have collections of back issues. Anyone who is unsuccessful in finding a fellow ham with a collection should try every library in the area, especially those at universities and technical colleges. If all else fails, a copy can be obtained from the ARRL Technical Department, 225 Main St., Newington, CT 06111-1494 USA for a fee of $3.00 per copy. Remember, it is both cheaper and quicker to obtain one locally.

Readers in most other countries can obtain copies from their own national ham organizations, sometimes translated into their own languages.

For those who intend to build an archive from the following digests, the first block of each article contains four items: Title, Author, Source, and Abstract. Ahead of the title is a two- or three-letter code to indicate which kind of article it is; e.g. "TA" for Technical Article, "HK" for Hints and Kinks, etc. They are structured to be easily captured by a computer program without human intervention.

TECHNICAL ARTICLES (TA)

Title> TA:Slow-scan TV - It Isn't Expensive Any More!
Author> Langner, John - WB2OSZ
Source> QST Jan 1993, pp. 20-30
Abstract> Slow-Scan Television (SSTV) is described and its history related. Relatively inexpensive equipment is available to send and receive SSTV according to standards now accepted by hams. The author offers an interface, in kit form, to link a computer with a transceiver to exchange SSTV images using any of the currently popular modes. It includes both hardware and the necessary software.

Digest> Slow-scan TV is a name given to a mode of transmission used by many hams to send single images to each other on the amateur bands, primarily the HF bands. In one sense, it is more akin to facsimile than to television in that it requires a substantial amount of time to send the image, such as a photograph or diagram. The system requires: (1) a source of the image in digital form, (2) the radio link, and (3) the receiving equipment that can convert the signal to a picture on a TV screen and/or some type of printer.

This article presents a basic description of slow-scan TV as practiced by the Ham community. It tells the history from the beginning in 1958, when a group of amateurs developed a black and white system capable of transmitting and receiving rather coarse monochrome pictures and displaying them on surplus radar cathode-ray tubes.

Years of ham development culminated in the mid-1970's with a system manufactured by Robot Research Company and called their Model 1200C Scan Converter. It was called that because it converted the electronic signal transmitted on the ham bands with a bandwidth limited to 3000 Hz. to the home-TV standard video signal so that it could be displayed on a common color-TV set. It provided a full-color image with 120 lines vertical resolution transmitted in eight seconds, but the cost was $1300 for the scan-converter alone.

The author notes that many hams who are interested in operating SSTV today are driven away with the belief that this mode is still very expensive. He shows that with the availability of computers in many, if not most, hamshacks and the development of much lower cost interface hardware, slow-scan TV is in the price range of a much larger segment of

the ham community.

Through the years a number of different SSTV modes have been developed, to be set up in computer software. They range from the original Robot 120 line black/white mode up to the highest resolution one now in use, known as AVT 188. It uses a 400-line RGB (for red, green, and blue) CRT display scheme.

The author describes in considerable detail the various functions that are required to transmit and receive the SSTV images. At the transmitting end, the image must be in digital form; either it is obtained in that form by downloading it from a computer source, or it must be developed by a TV camera, or optical scanner, plus a digitizer. This will break the picture into pixels, comparable to the dots on a newspaper photograph. Then each pixel is encoded as an audio tone between 1500 to 2300 Hz. and transmitted in sequence over conventional ham radio gear.

At the receiving end, the audio tones must be decoded into color and intensity values for each pixel and converted into a video signal for display on a TV screen. Most of the necessary digital processing can be done by a conventional home computer with the addition of a plug-in interface board.

The author describes an interface board and is offering it in kit form. He calls it the Pasokon TV Interface. The word is a Japanese-English abbreviation for "personal computer". The kit sells for $199.95 and includes the necessary software for processing any of the popular SSTV modes which utilize vertical resolution ranging from 120 to 400 lines.

The horizontal resolution is determined not by the transmitter, but rather by the receiver, to fit the requirements of the display device. Since the Pasokon is designed for use with an IBM-compatible computer containing a VGA display, it uses 320 pixels per line for all modes.

Any hams who are already equipped with HF station and IBM-compatible computer using 80286 or later CPU, at least 640 kilobytes of RAM and VGA displays, can get started by simply adding the Pasokon plug-in boards. They will be able to transmit images they have created on their own computers or obtained in computer form from other sources, and receive any image that has been transmitted to them.

To be able to send photographs taken by themselves or captured from a TV screen, they will need TV-cameras or scanners, and digitizers. The article lists a number of commercially available video digitizers, the prices of which vary with the speed at which one complete image can be processed. The fastest one, capable of capturing the real-time rate of video programming, 30 frames per second, sells for approximately $2000. At the other extreme, a kit is available for $89.95 that will process a limited-resolution image with a limited number of different colors in eight seconds.

Title> TA:High-Performance, Single-Signal, Direct-Conversion Receiver
Author> Campbell, Rick - KK7B
Source> QST Jan 1993, pp. 32-48
Abstract> Described is an improved direct-conversion receiver that offers single-signal performance. It eliminates the audio image by the phasing method of cancelation.

Digest> This same author wrote a similar article: "High-Performance Direct-Conversion Receivers", in QST's August, 1992 issue. That was a construction article that described a DC receiver, called the R-1. It has been duplicated by many hams who have reported excellent performance.

The present article gives construction details of a similar receiver, the R-2, that includes the added feature of "single-signal" performance. It overcomes the most important remaining shortcoming of the earlier receiver compared with superheterodynes. That is, it eliminates the "audio image" inherent in the basic direct-conversion process. In that process there is no intermediate frequency (i.f.); the local oscillator operates at signal frequency and converts the modulated r.f. directly to audio. So, when listening to a single-sideband signal, for example, the oscillator is at the frequency of the suppressed carrier and will convert to audio not only the desired SSB signal but also any interference that may appear where the other side band would be. In contrast, a single-signal system like the one in this article responds only to signals on one, selectable, side of the oscillator frequency.

The circuit used to perform this function is the familiar one that was used years ago in "phasing-type" SSB transmitters. This principle requires splitting the r.f. input into two separate channels with two mixers; the local oscillator signal to one mixer is shifted 90 degrees in phase from that to the other; the phase of the audio signal in one channel is also shifted by 90 degrees and the outputs of the two channels are combined in a summing circuit. The result is that the audio signals in one sideband add, and those in the other subtract to near zero signal level.

The article gives detailed construction parameters for operation on amateur bands from 3.5 Mhz. to 222 Mhz. and has designed a two-sided printed circuit board that contains all components except for those that are frequency-specific. The r.f. input circuits, including pre-amplifiers recommended for bands above 7.3 Mhz., and local oscillators, are mounted separately.

The printed circuit board is available for $20.00 from Applied Radio Science, P.O. Box 225, Houghton, MI 49931. A set of etching template and parts-overlay diagrams is available for an SASE from the ARRL Technical Department.

Mr. Campbell reports the results of tests that he made on a 40-meter model and compared them with measurements made on two commercial superhets: a modern solid-state transceiver with 2.4 Khz.

i.f. filter and an old Collins 75S-3C with its mechanical filter. He discovered, to his surprise, that the suppression of the unwanted sideband in the R-2 is actually the best of the three.

A similar 40-meter version of the R-2 was tested at ARRL Headquarters by Mark Wilson, AA2Z. He reports having used it during the CW Sweepstakes with excellent results. He even stated that the lack of AGC, which he expected to be an annoyance, was no problem to him. His final summary was: "This home-brew receiver holds its own, even under demanding conditions....I like projects you can build and enjoy without apologies. This is one of those projects."

Title> TA:Introducing METCON, A New Remote Control and Telemetry System
Author> Newland, Paul - AD7I
Source> QST Jan 1993, pp. 41-47
Abstract> Tucson Amateur Packet Radio (TAPR) is offering a control package to provide telemetry and control signals through conventional communication links, including radio. Included are three types of input modules for a variety of transducers. Reliable verification procedures prevent unauthorized persons from taking control.

Digest> This article describes a system developed by Tucson Amateur Packet Radio and now being offered for sale in kit form. It designed to operate at a remote location connected to the home base via a communications link which can be telephone, continuous radio link, packet link, or any other convenient method of signal transmission.

The system performs two types of functions: (1) measurement and telemetry, and (2) automatic control. Measurements are made by means of inputs from transducers and can represent temperature, power consumption, liquid level, wind velocity, number of times a motor has run over a time period, or any other of myriads of real-world variables.

METCON provides three basic ways that such variables can be represented: (1) a static value, such as temperature or battery voltage; (2) rate (pulses per time interval); and (3) total pulse count.

Automatic control is done by means of switch closures. The basic METCON board contains eight SPST relays with isolated contacts that can be used to actuate a.c. or d.c. circuits up to 24 volts above or below ground and with contact current not over .25 amps.

To facilitate the use of many different kinds of transducers, the manufacturer provides three kinds of input modules. The first of these is a voltage- or temperature- to-frequency module. It can be configured for full scale input ranges of 0-1, 0-10, or 0-100 volts d.c. Its output produces a continuous pulse train over the frequency range of 0-10 Khz. directly proportional to input voltage. In addition to accepting voltage input, it also can measure temperature with an on-board temperature-to-frequency transducer. Jumpers in the module can be set to configure conversion in either degrees Celcius or Fahrenheit.

Another module is an analog-to-digital converter. This provides an 8-bit output for each of 8 analog inputs. The input voltage ranges can be adjusted by means of jumpers and/or resistor substitutions for each input, independently.

The third module offered is an elapsed-time pulser that generates a pulse for each unit of time that its input is energized, from one pulse per second adjustable down to one pulse for every two minutes. By totalizing these pulses, one can obtain the total running time of a particular motor, for example.

As an example of a way the system can be used, the article describes a monitoring system for a boat anchored remotely in a harbor. In the owner's home would be a personal computer, a TNC, and a 2-meter transceiver. On the boat would be a 2-meter transceiver, a TNC, and a METCON system with transducers and modules. Under program control, or on demand, the owner could check to be sure that the boat is not filling with water, has not moved more than a specific distance from its anchorage, has not been broken into, and the like. Transducers proposed are a liquid-level float for bilge water, a pulser totalizing the number of times the bilge pump has run, entry switches on the hatch cover(s), and the like.

METCON also provides an elaborate authentication procedure so that no unauthorized person can take control of the system. Even if a would-be intruder should repeatedly record the owner's signals accessing the monitor over the air, it would not be possible to derive the accessing key.

Information and kits for METCON and the modules are available from Tucson Amateur Packet Radio (TAPR), P.O. Box 12925, Tucson, AZ 85732, phone (602) 749-9479.

Title> TA:A $5 Headset Mike
Author> Brede, Doug - W3AS/7
Source> QST Jan 1993, pp. 48-49
Abstract> Construction details for a simple, inexpensive microphone.

Digest> This is a construction article describing a very simple, small, and light-weight mike made from an electret element available from Radio Shack. The author mounts the tiny element on one end of a 6-inch piece of stiff wire and, on the other end, a spring-loaded battery clip. He attaches a length of RG-174 miniature coax cable to the mike and encloses cable and support wire in a length of shrink tubing.

In operation, the spring clip is used to hold on to the support band of a headset and the wire is bent to place the mike at a convenient location in front of the user's mouth. The user then can carry on QSO's with both hands completely free and the mike always in position.

The tiny microphone element contains within it a preamplifier which requires supply voltage between 1 and 10 volts at less than 1 milliamp. The author's rig, like many modern ones, supplies d.c. voltage on one

pin of the microphone connector, so he does not need a separate battery. If such voltage is not available, small penlite (size AAA) batteries will supply the required power. Battery life will be a year or more, in most cases. A wiring diagram is included.

The author reports that this simple and very inexpensive microphone is not only very convenient to use, but also its audio quality is very good. In using it, he had no problems with r.f. feedback in his shack. Using other mikes, he has had persistent problems due to the poor r.f. grounds, which are the best that he can obtain at his location.

PRODUCT REVIEW (PR)
conductor: James W. Healy, NJ2L
Sr. Asst. Technical Editor

Title> PR:Ten-Tec Omni VI MF/HF Transceiver
Author> Healy, Rus - NJ2L
Source> QST Jan 1993,pp. 65-68
Abstract> Specification and performance review of the latest version of Ten-Tec's Omni Transceiver. New features are DSP, built-in keyer, dual serial ports. Reviewer calls it the "easiest to use" of all new high-perfomance transceivers.

Digest> The Omni VI is the latest upgrade of the Omni line of transceivers. It has been specifically designed in accordance with the opinions and recommendations of DXers and contesters.

Among the many new features that this model contains, one of the most significant is Digital Signal Processing. The DSP system built into this rig duplicates many of the functions that are now being offered by the outboard DSP packages that are coming into fairly wide use on the ham bands. Included are the automatic notch filters that eliminate all heterodynes within a passband without reducing the fidelity of the underlying audio signals. Also provided are a wide selection of band-pass filters for use on CW, FSK, and SSB.

A built-in keyer is provided, with front-panel speed control and adjustable weighting. Also included are: FSK mode with a fixed 170-Hz. shift; separate receive antenna jack with a front panel selector button and indicator; and a reset button to clear the RIT and XIT offset without having to center the control knob.

Unique among available transceivers, the Omni VI provides two serial ports. One is a conventional RS-232 port that can be used for computer control, or other accessory control. The other port has a 1/8" jack compatible with ICOM's CI-V interface. Through both ports, it supports the ICOM command set, hence ICOM software should also work.

A wide variety of optional filters, including one dedicated specifically to FSK, are provided. Also a voice synthesizer and ALC annunciator are

available for vision-impaired operators.

The Omni VI is not available with an automatic antenna tuner. Also it does not provide general coverage reception or a transmitted-audio monitor.

Mr. Healy states that Ten-Tec is known for its excellent full-break-in (QSK) keying, and the Omni VI carries on this tradition. It operates in QSK mode all the time; the operator selects only the rate at which the receiver recovers; rapid for break-in, slow for semi break-in.

The reviewer's opinion is that the Omni VI is exceptionally well designed for convenient and efficient control under demanding conditions in DX pileups or in rapid-fire contest operation. He says flatly that "Of all the truly high-performance radios currently on the market, the Omni VI is the easiest to use....Ten-Tec's approach to designing and testing this radio shows their commitment to demanding users."

Title> PR:PacComm PacTOR Multimode Controller
Author> Ford, Steve - WB8IMY
Source> QST Jan 1993, pp. 68-70
Abstract> PacComm's newest TNC, designed for PacTOR; also operates in AMTOR, RTTY, CW. Reviewer finds performance superior in PacTOR, adequate in other modes.

Digest>This is a review of a new PacComm TNC specifically designed for PacTOR use. In spite of that fact, it is a fully-versatile multimode TNC and operates well also in the AMTOR, RTTY, and CW modes. As an extra-cost option, it can also be provided with HF packet mode.

The reviewer's opinion is that the performance on PacTOR is exceptional. One unique feature is automatic selection of PacTOR or AMTOR. When one calls CQ on either mode, an answer may be received either by a PacTOR or an AMTOR ARQ station. If the reply to a PacTOR CQ comes back in AMTOR ARQ, the PacComm controller automatically switches to AMTOR!

The reviewer found AMTOR operation to be "relatively smooth, aside from a few quirks". However, he rates performance on RTTY "only average".

The one item about which the reviewer is most critical is the deficiencies of the Owner's Manual. He feels that it gives a good discussion of theory and "fairly clear" set-up instructions, but falls down badly on the details of how to use the various modes. It seems to be written more for hams who already are well experienced with digital modes. His summary opinion is: "The unit is a good value for the money. Its PacTOR and AMTOR performance is excellent, and you get a CW keyer and RTTY operation in the bargain".

Title> PR:K1EA Software Digital Voice Processor
Author> Healy, Rus - NJ2L
Source> QST Jan 1993, pp. 71-72

Abstract> A plug-in card for IBM-compatibles. Digitizes, records, and plays back audio. Especially useful in contests.

Digest> The reviewed processor is a new piece of hardware being manufactured by Ken Wolff, K1EA, who is the author of the CT Contest Software. Its concept is simple: It takes audio input from a radio or a microphone, digitizes it, and stores it on your computer's hard disk. On demand, it plays it back, driving a transmitter or headphone, or both.

The unit is specfically designed to work with the manufacturer's CT software in contest operations. It allows the operator to record libraries of CQ, QRZ, call sign, contest exchanges, and many other kinds of messages for automatic playback during the contest period. In addition, it can record audio in increments from 5 seconds to 30 seconds so that if one misses a call sign during the "heat of battle", it can be instantly replayed it while simultaneously the device is continuing to record what is coming in through the radio!

All this is being done with very high fidelity. The digital sampling is being done at 9600 samples per second with a 12-bit resolution in the A/D converter. The reviewer reports that replaying the audio after it has been digitized, recorded, and restored to audio through a D/A converter, the result is indistinguishable from the live audio!

The reviewer's final summary expresses the opinion that: "If you're serious about voice contesting, you should consider adding a DVP to your station".

HINTS AND KINKS (HK)
conductor: David Newkirk, WJ1Z
Sr. Asst. Technical Editor

Title> HK:1-Watt In, 30-Watts Out With Power MOSFETs at 80-Meters
Author> Wyckoff, Jim - AA3X
Source> QST Jan 1993, pp. 50-51
Abstract> Construction article. Build a power amplifier for 80-meters using two common MOSFETs.

Digest> Mr. Wyckoff shows a wiring diagram and a photograph of a class-B linear amplifier that he built using inexpensive IRF-511 power MOSFETs. It is a push-pull amplifier designed for the 3.5-4.0 MHz. band and uses an adjustable bias circuit to balance the operating characteristics of the two transistors.

The author reports that the amplifier performs well and its stability is excellent. He does not advise attempting to operate the amplifier on the higher bands since the output power diminishes as the frequency increases. The amplifier delivers full 30-watts output with 1-watt drive on 80-meters, but on 10-meters its output is only 10-watts.

Title> HK:A Light-Operated Switch for Solar Panels
Author> Harbison, Lawrence - N7HRN
Source> QST Jan 1993, p. 51
Abstract> Construction article. Build a light-operated controller to open-circuit a solar panel used to charge batteries. Protects batteries from discharge.

Digest> The author lives in sunny Arizona and had available a 2.0-amp solar panel that he wanted to use as a power source to charge a deep-cycle battery. In such use, it is necessary to protect the battery from discharge when the sun goes down.

The simplest solution is to put a diode in the lead from the solar cells to the battery, but this sacrifices some 3- to 6-percent of the charge capacity due to the voltage drop. As a result, he designed a circuit that uses a cadmium-sulphide photoresistor to detect when the light becomes dim and opens a relay, isolating the battery.

A wiring diagram and photographs are included with the article.

Title> HK:Curing RFI in the Ham IV Control Unit
Author> Pataki, George - WB2AQC
Source>QST Jan 1993, p. 51
Abstract> Using by-pass capacitors to eliminate r.f. interference.

Mr. Pataki's ham transmitter has a 400-watt output and, when his beam was directed toward his house, the modulation on his signal caused the meter on the rotator controller to fluctuate. He found the effect annoying but was able to correct it by installing by-pass capacitors from each end of the rotator's direction-sensing pot to ground. He used .047 mfd. capacitors but indicates that any value from about .01 to .1 mfd. should work well. The capacitors should have a working-voltage rating of at least 25-volts d.c.

Title> HK:Take Notes With a Camcorder
Author> Jones, Clark - N7RPQ
Source>QST Jan 1993, p. 52
Abstract> Use a camcorder to record, in video and audio descriptions, details of work done on electronic gear.

Digest> The author reports his success in recording on a camcorder his experiences working on electronic gear. He mounts the camera in a fixed position having a clear view of the work surface and dictates a commentary as he goes. When the job is completed, he puts a label on the tape identifying the gear.

Although he uses standard, not high-quality tapes, he cautions against using inferior tapes that might deteriorate in time since he expects to keep them for long periods.

TECHNICAL CORRESPONDENCE (TC)
Conductor: Paul Pagel, N1FB
Associate Technical Editor

Title> TA:Touch-Control-Lamp RFI
Author> Wiley, James B. - KL7CC
Source> QST Jan 1993, pp. 53-54
Abstract> Describes RFI from "touch-control" lamps. They contain oscillators at 150-200 KHz. with no filtering. Recommends ways to locate offending lamps and what to do about them.

Digest> This letter regards a relatively new type of RFI problem many hams are now experiencing. It usually appears in the form of a broadband, slowly drifting, a.c.-modulated signal. The sources are touch-controlled lamps. They operate on the capacitance-relay principle; each has a sensing contact that one touches to turn the light on or off. It is connected to a tuned circuit that controls an oscillator. Touching it adds capacitance which detunes it, resulting in a drop in the signal level to a built-in detector that then open or closes a relay, or in some cases adjusts brightness level up or down.

Most of these operate at frequencies in the 150 to 200 Khz. region, but their outputs are typically very rich in harmonics. Interference from such devices usually appears as broad-band, a.c.-modulated signals, often appearing every 50 to 200 Khz. across the band. They typically drift slowly and consequently come and go.

This kind of interference sometimes can create problems as far as 1500 feet from the source. In many cases, the interference is two-way; a strong ham signal may actuate the lamp. The author notes a case in which he discovered the source of interference as a result of operating his high-power station on CW. The neighbor's offending lamp flashed on and off with the code!

To locate the source of such interfering signals, the author suggests the use of a portable short-wave receiver with a loop antenna. Even approaching the service entrance wires of a home containing an offending device is usually enough to get a noticeable signal. If the owner will permit entrance to his premises, the same radio can generally be used to point out the offending lamp.

He reports that it is usually not possible to eliminate the interference through the use of filters or other conventional RFI isolating techniques, because of the fact that the exposed contact plate itself acts like an antenna. FCC regulations, Part 15, prohibit consumer devices from interfering with communication services, but usually it takes considerable diplomacy to convince homeowners to stop using a device that they have bought and paid for. The ARRL publishes a variety of materials and guides. Anyone suffering from such interference is strongly advised to obtain the ARRL "RFI Package". It can be obtained by sending a 9 x 12 inch SASE with $0.98 postage to the Technical Department Secretary, ARRL, 225 Main Street, Newington, CT 06111.

FEEDBACK (FB)

Title> FB/TC:Dipoles Above Real Earth, QST Nov 1992, p. 68
Author>Michaels, Charles - W7XC
Source> QST Jan 1993, p. 54
Abstract> Error in a mathematical statement.

Digest> There is an error in the sentence "...to the feed point by a factor 1/sin2L, but..." It should have read: "...to the feed point by a factor 1/sin^2L, but...", where "sin^2" means sine-squared.

Title> FB/TA:A Dual Radio Speaker, QST Nov 1992, pp. 56-58
Authors> Ramhorst, Neil - KL7JGS and Cady, Fred - KE7X
Source> QST Jan 1993, p. 54
Abstract> Error in wiring diagram.

Digest> The wiring diagram showing the two-pole, 3-position switch is in error. The correct wiring is shown in this issue (January, 1993), p. 54.

GENERAL INTEREST ARTICLES (GI)

Title> GI:The Beat of a Different Drum:
Author> Booth, Rick - KM1G
Source> QST Jan 1993, p. 31
Abstract> Biography of Cop MacDonald, originator of ham SSTV.

Digest> Cop MacDonald, ex-W9OLS, who is now VY2CM, originated amateur Slow-Scan TV (SSTV) in about 1953. At that time he was in engineering school and learned that Bell Laboratories was working on a way to send signatures over telephone lines. The method used was a scanner with a scan-rate slow enough that the signal frequency did not exceed 3 KHz. Mr. Macdonald realized that the same scheme could be used by hams to send many different kinds of images over HF.

His first experiments used an oscilloscope with a phosphor that had a persistence of some 7- or 8-seconds. Hence, he designed a system that would scan as much area as it could reach in 6- or 8-seconds without exceeding the 3.0 KHz. frequency limit.

His first system used an AM subcarrier, with a 20-Hz. horizontal scan rate and a 6-second frame repetition rate. After a year or more of experiments, he changed to FM with a 15-Hz. horizontal rate and an 8-second frame scan.

Other hams heard about his experiments and joined in, but it was not until 1958 that QST published a comprehensive article on the new mode. Meantime, Mr. MacDonald was enjoying a successful career in electronic engineering and became the director of research for a company. At that

point, he decided upon a change of life style and took a back-packing trip around the world with his wife and daughter. Since then, he has moved to Canada and pursued other interests, including ecology, energy conservation, and meditation.

Title> GI:Excellence in Recruiting
Author> White, Rosalie - WA1STO
Source> QST Jan 1993, pp. 55-56
Abstract> How to interest newcomers to ham radio.

Digest> In this article, Ms. White discusses ways of interesting people of all ages in amateur radio. In 1992, the ARRL established a yearly award to be given to a person most deserving of recognition for their ability to attract "recruits" to the hobby.

Title> GI:Tall Ships Pose a Tall Order for Boston Hams
Author> Booth, Rick, KM1G
Source> QST Jan 1993, pp. 73-75
Abstract> Boston hams organize activities around the "Tall Ships" gathering.

Digest> In July, 1992, some 7-million people went to Boston to see the "Tall Ships", the square-rigged sailing vessels that gathered in Boston harbor to celebrate the 500th anniversary of Columbus' first voyage. Boston hams offered their services and helped the Boston Emergency Medical Service (EMS) care for the mass of visitors. This is the story of their experiences.

Title> GI:A Good Day at Effingham
Author> Johnson, Tom - N4TJ
Source> QST Jan 1993, pp. 76, 78
Abstract> Fiction.

Digest> This is a fictional tale about a ham in the non-existent town of Effingham, South Carolina who was also a news reporter. It involved a fire that started in an outhouse behind the county court house. Rumors of the fire spread, and grew, rapidly. As the stories spread, they became more exaggerated, which in turn caused them to be spread farther. The end result was that they reached not only the state capital but also to Washington, D.C., and there descended upon sleepy Effingham 28 fire engines, 596 National Guardsmen, and helicopters carrying advanced elements of the 82nd Airborne Division.

Title> GI:Maritime Mobile, Love Boat Style
Author> Tinley, Hugh - K0GHK
Source> QST Jan 1993, pp. 79, 81
Abstract> Operating maritime mobile on a cruise ship.

Digest> Mr. Tinley tells the story of his Caribbean cruise aboard a ship of Greek registry. He found that, with the help of the ARRL, he had no difficulty getting a Greek license to operate ham radio aboard the ship, and was allowed to set up his rig on the sundeck, between the bar and the swimming pool! His rig put out 10-watts on 10-meters, and he had an antenna on a fishing pole. With this, he operated for six days, during daylight hours. After sundown, 10-meter propagation dropped off and he was "forced" to pursue other activities on the ship during the evenings.

Title> GI:Life After Death: A New Beginning
Author> Wadsworth, Nat - WK1X as told to: Steele, Don - W1NFG
Source>QST Jan 1993, pp. 77-78
Abstract> A near-death experience. Recovery was aided by ham radio.

Digest> Nat Wadsworth, WK1X experienced cardiac arrest and suffered brain damage when his circulation stopped for 12-minutes. Emergency aid restored his heart and he lived, but was greatly impaired both mentally and physically. For a time, his memory was completely gone. His first recollections began when his wife told the physician, in Nat's presence, that he had been a ham operator. Little by little, his recollection of radio operation and Morse code came back. His recovery was accelerated when he obtained a transceiver and returned to the air. He is continuing to improve and his doctors credit ham radio for much of his progress.

Title> GI:30-Years Between Novice Roundups
Author> Luetzelschwab, Carl - K9LA
Source> QST Jan 1993, pp. 80-81
Abstract> Ham radio nostalgia.

Digest> The author became a ham in September, 1961, when he was entering the ninth grade in school. He relates his experiences in getting a station on the air and operating in the ARRL Novice Roundup competition in February, 1962.

In January, 1992, he decided to repeat the experience using gear identical to that he had used 30-years earlier. He was able to buy an old DX-20 transmitter and NC-60 receiver, two 40-meter crystals that he could triple and also use on 15-meters, and put up an inverted vee antenna at 25-feet height. He enjoyed the experience thoroughly, but admits that his score of 18 stations in 13 sections was not up to his performance 30-years earlier, when he worked 42 stations in 18 sections.

Archive-name: radio/ham-radio/elmers/admin
Revision: 1.6 12/26/93 15:45:09
Changes: Added new index file, Gopher, WWW, and WAIS entries

This administrivia file and the companion Amateur Radio Elmers Resource
Directory are intended for non-commercial distribution via Usenet. Any
other uses, please E-mail for permission.

A Brief Historical Overview:
++++++++++++++++++++++++++

If there is any one constant in the changing state of the communications
art, it is that "Hams" (Amateur Radio Operators) have always been on
the forefront of it. Rumors abound where the term "Ham" came from.
Some of the more amusing are described at the end of this article.

Regardless of origin of the name, a "Ham" is universally recognizable as
one who experiments in radio and communications.

Whether it be constructing a low-power CW radio with vacuum tubes, or
designing TCP/IP packet networks, such experimentation has historically
spilled over into the mainstream such as was the case with Edwin
Armstrong, who developed the regenerative oscillator and FM radio, or
General Curtis LeMay (W6EZV) who was instrumental in making Single-
Sideband the communications standard for the Strategic Air Command
(1947-1992, now reorganized into a joint command called USSTRATCOM) and
eventually the U.S. Air Force. Although packet-switching techniques
originated from DARPA (Defense Advanced Research Projects Agency) and
the ARPANet, no one can deny the tremendous influence that amateurs
have had in demonstrating the viability of TCP/IP and AX.25
communications via radio links. The efforts of AMSAT (the Amateur
Satellite Corporation), including the development of many ham satellites
and the low-orbiting Microsats (communications satellites no bigger than
a breadbox that use store-and forward packet techniques), have certainly
advanced the state-of-the-art in communications, one of the defined
purposes of the Amateur Radio Service, as recognized by international
treaty.

Since in many cases hams are writing "the book", there is often no
"book" or other established reference for a beginner to refer to.
Traditionally, information has been passed on from ham to ham via word-
of-mouth. Like many of the traditional crafts, a variation of the
Master-Apprentice system has emerged, the Elmer-Novice relationship.
Called "Elmers" because they are usually older and wiser, having the
```

benefit of many years in the hobby, including several failed projects, and an electric shock or two, they have traditionally been the mainstay of amateur radio, and the source of many new hams, particularly those interested in working on emerging technologies.

Even more importantly, Elmers provided an outlet for the impatient newcomer who wanted "to know everything, and right away." Faced with such a request, a good Elmer will smile and proceed to lead the novice through some project or operating experience. Several hours, days, or weeks later, the novice would have his answers, but would have earned them. Even better, the sense of accomplishment would boost the novice's confidence and nudge him or her down the road to being a model, experienced ham operator.

Many present hams feel that such an experience is missing today. In today's hustle-bustle world, the response to such natural curiosity and desire to learn is, more often than not, "I'm too busy" or "RTFM." As a result, the quality of new hams declines and the knowledge and operating habits they develop in their first formative months and years leave much to be desired. And the very same hams who claim that they "can't understand the new generation" also, in almost the same breath, lament about the "decline of amateur radio."

What is an Elmer today?
++++++++++++++++++++++

An Elmer today is of any age, male or female, who has some expertise and is willing to share it with beginners. Elmers don't even need to be licensed amateurs, just people with knowledge in some area of electronics or communications technology.

What is a Usenet Elmer?
++++++++++++++++++++++

With the ever-widening scope of the Internet, and the amateur radio newsgroups on Usenet, the potential for Elmers to share their knowledge to a wide audience has never been greater. To that end, I have started to maintain a list of such Elmers. Volunteers need only send me their name, E-mail address, and area of expertise. I have set up an administrivia mailbox for this purpose (elmers-request@unomaha.edu, the default Reply-To: of this message).

Those desiring a more extensive list, or who need more specific assistance, are encouraged to contact Rosalie White, WA1STO, Educational Services Manager at the American Radio Relay League, 225 Main St., Newington, CT 06111 or via electronic mail addressed to rwhite@arrl.org.

How may I obtain the latest copy of the Elmers List?
++

There are currently 7 ways of obtaining the Elmers List. Any site at least reachable by Internet E-mail can use options 3 or 4:

1. Usenet News: The latest copy of the list can be found in the companion posting to this message, "Amateur Radio: Elmers Resource Directory." Since the list is cross-posted to rec.radio.amateur.misc, rec.radio.info, rec.answers, and news.answers on the 1st of each month, with an expiration date 6 weeks into the future, there should always be a copy available at most news sites. Check your newsreader documentation for information about reading previously-read articles.

2. Anonymous FTP: If your site is directly connected to the Internet, you may retrieve the latest copy via File Transfer Protocol (FTP) from the following sites:

ftp.cs.buffalo.edu /pub/ham-radio/elmers*
rtfm.mit.edu /pub/usenet/news.answers/radio/ham-radio/elmers/*

3. Mailing-List: Since the list is cross-posted to rec.radio.info, the latest copy may be obtained from the mailing-list gateway for that newsgroup (along with many other informational articles about radio) when it is published each month. To subscribe, send E-mail to:

listserv@ucsd.edu

and in the BODY (not the Subject) of the message, write:

subscribe radio-info

The server may not be able to determine your return address. In that case write:

subscribe radio-info (your E-mail address)

You should get an acknowledgement very shortly.

4. Mail-Server: If you don't want to read through the entire gateway of rec.radio.info, or want a copy of the list right away, send E-mail to:

mail-server@rtfm.mit.edu

and in the BODY (not the Subject) of the message, write:

send usenet/news.answers/radio/ham-radio/elmers/admin
send usenet/news.answers/radio/ham-radio/elmers/index
send usenet/news.answers/radio/ham-radio/elmers/list
send usenet/news.answers/radio/ham-radio/elmers/diff

and the latest copy of the list should be sent to you E-mail within 24 hours (the mail-server uses batch priority to reduce system demand).

The last three services are experimental. I'm not terribly familiar with them, and cannot offer much technical support regarding their use. (I'd appreciate feedback on whether or not you find them useful, though.)

5. Internet Gopher: The latest copy of the list should be available from the following Gopher sites, all at standard port 70:

cc1.kuleuven.ac.be
jupiter.sun.csd.unb.ca
gopher.univ-lyon1.fr
ftp.win.tue.nl
gopher.win.tue.nl

see also comp.infosystems.gopher

6. World-Wide Web (WWW): The latest copy of the list should be available from the following WWW site:

URL: http://www.cis.ohio-state.edu:80/hypertext/faq/usenet

under pages:

radio/ham-radio/elmers/admin
radio/ham-radio/elmers/index
radio/ham-radio/elmers/list
radio/ham-radio/elmers/diff

see also comp.infosystems.www

7. Wide-Area Information Service (WAIS): The latest copy of the list should be available from the WAIS server at rtfm.mit.edu (standard port 210) in database "usenet."

see also comp.infosystems.wais

How may I contribute to the Elmers List?
++++++++++++++++++++++++++++++++++++++

By using this resource, you are benefitting the net by obtaining assistance in the fastest and most efficient way possible. By volunteering to appear on this list, you are contributing to the good reputation of the radio-related newsgroups.

Thanks to all the volunteer Elmers, as well as courteous list users, for making this service a success.

--
73, Paul W. Schleck, KD3FU

pschleck@unomaha.edu (personal mail)
elmers-request@unomaha.edu (Elmers List administrivia)

* Possible origins of the word HAM:

The acronym "Home Amateur Mechanic" or...

from the Cockney pronunciation of "L'amateur" or...

the initials of the founder of the American Radio Relay League, Hiram Maxim, W1AW (his actual middle name being Percy apparently notwithstanding) or...

from the call letters of one of the first amateur stations at Harvard, H.A.M. (please, no flames from W1XM at MIT)

Dale Mosby, N7PEX, offers the explanation that HAM must stand for "Hardly Any Money," considering the investment one could make in the hobby.

Knowledgeable individuals from the American Radio Relay League (ARRL), and other radio historians, seem to agree that the terms "Ham" and "Lid" (an inept operator) both originated with landline telegraphy. A "Ham" was a show-off and a "Lid" was a telegraph operator so inexperienced, he had to use a pot or can lid to rest his telegraph sounder on to properly copy the code.

As an interesting historical footnote, early telegraph operators may have been the first to experience the infamous curse of our communications age, Repetitive Stress (or "Carpal Tunnel") Syndrome (called "Glass Arm" in those days, which encouraged the invention of the semi-automatic or "bug" key).

(Larry E. McDonald, N6ZMB, wrote to point out another plausible origin, which doesn't necessarily contradict the ARRL version. The term "ham" may have been derived from "ham-fisted" or "ham-handed" to describe poor telegraph operators who were hired from the ranks of radio operators. Or maybe "ham-fisted" and "ham-handed" are derived from "ham." Who knows?)

Amateur Radio Elmers Resource Directory (as of 03/01/94)
++

David Andrews ZL2SX

andrews@kai.ee.cit.ac.nz

I have been involved with the Amateur Radio International Travel Host
scheme. I also chair the NZART Frequency Management and Technical
Advisory Group, which is responsible for all repeater coordination and
band-planning (LF, MF, HF, VHF, UHF, and above) in New Zealand. I would
be pleased to answer any queries with regard to reciprocal licensing or
frequency coordination that may arise.

++

Jeff Angus WA6FWI

jangus@skyld.tele.com

I run NOS as a tcp/ip <--> AX.25 mail bbs gateway. I also run a few nodes,
soon to replace with Tnet-x1g on one and a PC NOS-switch on the other.
And, I have successfully installed UUPC/extended 1.11k and SNEWS for those
MS-DOS afficionados out there.

ampr.org IP Coordinator for California - Los Angeles and San Fernando
Valley subnet (44.016.xxx.xxx)

"We're here to help, we don't loan tools" (Just kidding....put me on the
list). Monday-Thursday 8 AM to 9 PM Pacific time, Friday 8 am to 5 pm.

Jay Appell --> KA1SNA

1976-1978 FCC Personal Users Radio Advisory Committee
Task force for rules Rewrite Citizens Radio Service
Rules Interpretation

1988-Present Stratus Computer/ Technical Support Engineer

I am CEO of Creative Media Productions a multimedia consulting
company.

Address: Jay_Appell@cac.stratus.com
Telephone: 1-508-478-6969 X200 at Creative Media Productions
1-508-478-1429 24 Hour Ham radio BBS and other topics

I enjoy SCA reception and multimedia use in Amateur Radio. If anyone would
like to reach me by modem, 508-478-1429 (24 Hr) BBS 14,400.

I have been referred to as the ham responsible for digital users manuals
in amateur radio. The first manual was the DJ-590 and subsequent manuals
included the 560,580 and 600 for Alinco. My contacts in the amateur radio
community have helped other amateurs to know more about products, hidden
features and new product offerings. The BBS will now included the latest
info on YEASU and ALINCO products. If you have a product that you wish to
have evaluated for the general amateur community, please contact before
sending.

If you have questions with regard to customer service at these
companies, please forward to me and they will be passed to the company
contacts.

++

Ken Bass K4EVH

bassanco@access.digex.net

Licensed since 1959.

Experience in presently mostly Microsats, but I have experience on Modes A,
B, J, and Oscars. I have concentrated on "cheap" and low-power setups, like
my Microsat setup using in-the-attic homebrew/Radio Shack omnidirectional
antennas.

* (508) 635-6300 NM1D AMPR: nm1d@nm1d.nh.usa.noam *
**/

Author of the following MS-DOS ham programs:

AutoExam - Examination simulator and study aid
AutoCW - Morse Code practice program
DOSGATE - allows users to run programs on your PC remotely (AutoExam
compatible)
AutoCall - Allows use of the Buckmaster HAMCALL CD-ROM online callbook

with DOSGATE
AutoFax - Allows reception of weather fax using Kantronics TNC's
SeeSats - Real time satellite tracking (text only), DOSGATE compatible

Most of these programs are available from wuarchive.wustl.edu under
/mirrors/msdos/hamradio or write me at:

7 Red Field Circle
Derry, NH 03038

and enclose:

A FORMATTED high density diskette (either 1.44 MB or 1.2 MB; 3.5" or 5.25").
A Self Addressed STAMPED return diskette mailer.
A note explaining that you want a copy of AutoExam and/or AutoCW
(or one of the other programs).

I am always receptive to individuals interested in maintenance,
enhancements, and non-commercial distribution for these shareware
programs.

++

++
+ Jay Freeman, WT9S Packet: wt9s@w9yci.il.usa.noam +
+ internet: freeman@eagle.sangamon.edu +
++

I can assist anyone with most PC installation/troubleshooting
problems. I have a good deal of experience installing and configuring
OS/2, have a good grasp of Unix (not a wizard yet though :), and a
thorough familiarity with the ISA bus and the cards that go in it.

On the radio side of things, I like digital modes and experimenting with
antennas, specifically:

- PACTOR and AMTOR
- Configuring Kantronics All-Mode (KAM) TNC's for proper operation
- Over a decade of packet experience, including setting up both DOS and
OS/2 versions of KA9Q NOS
- HF wire antennas, including 160m full-wave delta loops

Georgia Institute of Technology, Atlanta Georgia, 30332
Internet: ccoprfm@prism.gatech.edu
Bitnet: ccoprfm@gitvm1.bitnet

I am the list owner of a mailing list for people who have/are interested
in products produced by Advanced Computer Controls Inc. (ACC). For those who
might not know what ACC does; they produce products (mostly for the amateur
radio service) such as repeater controllers, digital voice recorders, remote
base control units, etc.

To join the ACC (Advanced Computer Controls) equipment discussion
mailing-list, send E-mail to listserv@gtri01.gatech.edu with "subscribe
acc-l your-name" in the body of the message. An acknowledgement and
welcome message will follow. Administrivia, policy questions,
or other queries may be directed to me.

++

Steven M. Knapp KA9QOA Computer Engineering Senior
sknapp@iastate.edu Vice President Cyclone Amateur Radio Club
Iowa State University; Ames, IA Durham Center Operations Staff

A few members of our ham radio club were interested in helping out.
Since our turnover is usually 4 years or so (graduation is a horrible
thing), I thought it may be difficult for us to keep the list up to
date. I thought that by creating a local mailing list called
"elmers@iastate.edu" we could add or remove people as need be. There
would always be at least one person receiving mail on that list,
usually more! Even after I graduate, this list will be maintained
allowing ISU hams to easily help others.

Currently we have people with packet experience, some HF experience,
much repeater experience, in addition to a considerable background in
theory, as many here are electrical engineering or computer engineering
students. If a question can not be answered by the readers of the list,
there are many other local hams that could be prodded for the info.

Our local ham radio club has been especially interested in helping local
disabled hams (or hams to be) get on the air. But anyone local who
needed help would find a group at their door ready to work.

I can help people with HF stuff, cheap antennas, and am willing to help troubleshoot problems with rigs.

I believe that one of the pillars of ham radio - construction/ understanding at the burn-your-hand-with-a-soldering-iron level - is drifting out of ham radio. With Japanese radios which cost so much, fewer and fewer hams are willing to risk their warranty to service their own equipment. I would like to see a turn-around here...

2350. Hamblaster Update

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-01 14:38:29 UTC
From: jwa@tellabs.com
Message-ID: <1994Mar1.143829.7840@tellab5.tellabs.com>
Source record: 270302

2-15-94

I hope that this will clear up a few questions about
the Hamblaster.

Disclaimer

This IS NOT an ad. The Hamblaster is not a product
that's being sold to amateurs or any other group.
It's a 3 year effort by myself and Will Torgrim N9PEA.
We have been doing this as a hobby, hopefully, to
improve Amateur radio.

Finely, the development cost thousands of dollars
and we haven't earned a single penny for our efforts.

We have considered the possibility of making the PC boards
available and a "hard to get parts kit" but there is a
support issue that needs to be resolved.

The Hamblaster is not a software package. It requires a
special sound card that uses a Texas Instruments TMS320C25
DSP to run filters or audio demodulators. It can interface
to a TNC via a TTL digital port and replace the TNC's poor
filtering.

It's not compatible with other sound cards but it can
co-exist with them. I use my Soundblaster Pro and Hamblaster
together. I can, for example, run a filter on the the Hamblaster,
connect it's output the Soundblaster and record a CW signal using
the SB software under the Windows environment.

New Developements

1) Adaptive (LMS) filter

We now have an operational adaptive filter. It converges
on and filters out continuous tones. Last night I was
copying SB on 40 meters and I transmitted an interfering
signal using a Kenwood TS440 and a dummy load. The
heterodyne was so strong that it was almost impossible to
copy the QSO. I connected the receiver's headphone output
to the Hamblaster and loaded the LMS filter. I then turned
off the computer.

The heterodyne was completely removed ad I was able copy
voice clearly with no interference. The was some background
but it wasn't objectionable.

There will be some controls added to the LMS filter that will allow you to adjust the delay, filter taps and noise floor. I'll keep you posted!

Normally you would mix a LO with the ~ 300 khz to get say, a 50 khz IF,
then use something like a EXAR 2211 FSK demod to recover the data.

Or, use a phillips 615 (NE or SA) to do the mix, lo, and demod, all
on one chip.

> It comes from the RST signal reporting system.

I would question this. You will never hear an air traffic controller give a signal report greater than 5X5. In fact, I've never heard one give a report under 5X5 for that matter. It seems to me they have 3 signal reports commonly used:

"Taylorcraft 99999, You're 5 by 5. Squawk 4747, transistion approved".

"Aircraft calling, you're garbled and unreadable. Remain clear of ARSA/TCA".

"Aircraft calling, you're scratchy and unreadable. Remain clear of ARSA/TCA".

The last two phrases are often used in response to aircraft handhelds. I've started using 5X5 myself after becoming disgusted with the abuse of 5X9. I used to always use 5X7 out of generosity but a more middle figure is probably better. 5X9 should require meter repair while 5X0 obviously means you only hear hiss. Actually, "Loud and Clear" has no more syllables than "Five by Five" and will probably be better understood by a wider audience.

A Tailorcraft suits me fine.

2355. QST review of Dual-Bander HTs

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-01 16:57:10 UTC
From: Allen Wallace <allen@dtint.dtint.com>
Message-ID: <1994Mar1.165710.2145@dtint.dtint.com>
Source record: 270307

In the last QST, they reviewed 4 different dual-band HTs. The question I have, is what is their extended TX / RX frequency range when modified?

For example, I've heard a rumor that the TH-78A can transmit AM down in the aircraft band. I don't believe it, nor would I ever want to transmit down there!

I've also heard that most receive well into the 800 MHZ range.

Can anyone enlighten me?

73,

Allen Wallace

New to me too - thats why I am spending time on them :-)

> I'll deny I ever said this but I will grant you that other modes will
> eventually take over CW (oh my God - I don't believe I admitted that)

I share your regret, CW is still a *lot* of fun. However the reality is
that the world is going the other way...

BTW did you see the article about spark/arc transmitters in this month's
QST? Not *that* would be fun to play with!

> - what will it take? As long as the shore stations keep monitoring the
> CW frequencies some ships will keep using that mode. So the decision rests
> entirely in the lap of the shore stations.

Not quite, I suspect it is essentially economics. Like the Japanese
proposal for totally unmanned ships programmed to go from sea bouy to sea
bouy! I hope I never see that, but if it saves a buck ...

Cut the cable to the shortest length. That will reduce the loss the most.
There is no reason to have the transmission line any particular length.
THis is an old wives tale.
Read the ARRL book Refelections if you are curious, or learn how
to use a SMITH chart.

>
> 3. Practice not dotting i's and j's and don't cross the t's.
> This will come in handy later at higher speeds.
>
> [the rest deleted]

Good advice. I started to use cursive at about 10 wpm because I knew that as I approached higher speeds, printing would become a `bottleneck.'

I have very neat penmanship (I spent a few years in Catholic school), but it really goes to hell at my current limit of 20 wpm+. This kind of bothers me, as I have always taken pride in my penmanship.

But here's a curious thing... now *cursive* is becoming a bottleneck, and the main reason is the lower case letter `m.' I can't write it fast enough. (Three humps in a row!) I can follow along at 20 wpm fairly well, but when I hit the letter `m,' I often stumble and miss the rest of the word. What to do? Suggestions.

And another question about Morse code... Has anyone taken any of the Morse code tests for a FCC radiotelegraph license? If so, what method of copying do the examiners allow? Is it strictly by hand (pencil and paper), or can you use a keyboard? For the second class license you must be able to copy plain English at 25 wpm, which is kind of fast for pencil and paper. (Well, too fast for me at least.)

Did anyone notice that the latest issue (March) QST now says ARRL publications is selling: "Antennas & Techniques for Low Band DX'ing"?

It's described as revised and expanded 2nd ed. 1994 by John Devoldere, ON4UN.

Looks like the wait is over!

The listing is under Antennas & Transmission Lines in the ARRL publications section.

Ah, but which version of STSPLUS is it ? The damned thing gets updated
two or three times a year, or so it seems. The version numbering is pretty
unusual as well. For what it's worth, the latest I've seen is 9353, which
if I recall the method makes it the last week in '93. 9333 was the last
major upgrade.

Regards
Ian.

>communication? Or perhaps a set of repeaters that could be linked?
>Providing of course we joined the necessary clubs?

There's a couple of possibilites that come to mind immediately. First, Santiago Pk gets into most of SD pretty good and I think it should get Anaheim.

On 2M you should try 145.22- (103.5)on Santiago Pk. There are other LA/Orange county rptrs that you can get from SD with gain antennas (but not very well with typical mobile antennas). I used to get into Crestline just fine using 40w into a 13dbd yagi array from Escondido. Another possibility is the 147.09+ repeater on Catalina, but I don't know how well it gets to Anaheim.

On 220, the Condor net should do it, they also have a rptr on Santiago that gets SD (224.82- 156.7), plus they have a repeater at Big Bear (224.18-156.7) that should cover Anaheim.

: > it mean. I know it means good copy, but what specifically does it mean?
: > Does it come from the early days of radar, of ham radio, of military
: > aviation or what?

: It comes from the RST signal reporting system. (I'll let others flame
: each other as to its orginations.) The scales being R for readibility
: S for signal strength and T for tone. (We're speaking morse wireless
: here.) R is from 1 (not readable) to 5 (perfectably readable). S is
: from 1 (I can't hear it) to 9 (It's really loud) and T for for tone
: with 1 (rough AC buzz) to 9 (pure note).

: Of course, with the advent of phone (am and ssb) operation they dropped
: the tone report. And as most DXers will tell you, "You're 59 LA" doesn't
: have any bearing on received signal, but instead means, "I want a QSL
: card."

As a radio operator in the USMC in the early sixties, we used a scale of
1 - 5 for Signal Strength, hence 5x5. The military 2 1/2 ton truck was
known as a 6x6, so the "saltier" operators would say "I hear you like
a truck".

On a slightly related note, I met N2XYL this past weekend. I heard somebody clear with this person on the repeater, but didn't hear the person's voice. My first thought was "Wow, I sure hope a woman got that call!" Sure enough, I met Tina at the North Berkshire ARC meeting that evening. She was quite amused at having gotten N2XYL as her call, and agreed with me that it was good that a woman got it!

Personally, when I talk to a fellow ham about his wife, I talk about his wife, not his XYL. And Dan's not old enough to be my OM... :-)

I am looking for a way to make phone calls from my car through my own phone line, not a cellular service. I have heard a little about 'autopatches', but have some questions.

1 - I this possible with half duplex on one frequency? if so, would the person on the other end have to dial some touch-tone to switch the base unit from receive to transmit, etc?

2 - Is there a charge for using ham repeaters.

3 - Would my best bet be to try to get a ham lisence? My only reason would be for the phone service.

4 - Could it be done with a CB? Would it be legal? What is the range?

Thank you very much!

>Thanks for the help.

Three possibilities come to mind, depends a lot on where in San Diego:

BARC 146.920 - pl114.8

Catalina 147.090 + pl107.2

CLARA 145.220 - 103.5

Note that CLARA has been having some QRM problems of late, but when it is
up, that's the one for San Diego to Orange County (and then some).

Asterisk indicates predicted value.
For information concerning ASAPS for an IBM PC (or compatible) contact IPS.

The IPS Monthly T-index is derived from the observed monthly median values
of foF2 for each hour at up to 40 ionospheric stations worldwide.
These records become available from IPS stations in Australia very soon after
each month, but the majority are received up to one year later.
This means that the exact observed value of the monthly T-index is not
available until some months later.

The predicted smoothed monthly T-indices are computed by using a statistical
analysis of the observed monthly T-indices for all solar cycles since 1938.
The IPS T-indices may not be updated each month but only when sufficient new
data becomes available.
==========
2. FLARES AND FADEOUTS

All M flares with an energy greater than or equal to M1 are tabulated under
class M flares.
However, times of fade-outs are shown only for flares with an energy greater
than X-ray class M3.

DATE CLASS M CLASS X FADEOUT POSSIBLE
FLARES FLARES ON DAYLIGHT CIRCUIT
February 20 1 0104-0216 UT
February 27 1

2.1 Comments on Solar Activity.

Solar activity was at very low to low levels for most of February.
Two M-class flares were observed during the month, the largest, an M4.0/3B
was observed at 0141UT on February 20, and an M2.8 was observed at
0920UT on February 27.
The daily 10cm flux showed very little variation throughout the month.
The peak value for the month was 108 observed on February 19 and 20. The
minimum value for the month was 93 observed on February 5, 11 and 28.

==========
3. GEOMAGNETIC DISTURBANCES (for Learmonth, WA)
DATE COMMENTS

February 5-16 The field was at active levels on Feb 5, increasing
to major storm levels on Feb 6 and 7. Activity then
reduced to active to minor storm levels Feb 8 to 14,
declining further to active levels Feb 15-16.

Febraury 21-22 Major storm levels observed following a sudden
commencement of 135nT at 0900UT on the 21st. This SSC
was due to an M4 flare on 20th. A recurrent
disturbance was also expected during this interval.

3.1 Comments on Geomagnetic Activity.

Conditions during February were disturbed. The peak A index
for the month was 65 observed on the 21st. The long disturbance
Feb 5-16 appears to be due to a broad south polar coronal hole.

==========
4. IONOSPHERIC DISTURBANCES (for Sydney)
DATE TIMES

February 6 Depressed 30% 00-05UT and 21-22 UT.

February 7 Depressed 20-30% all day.

February 8 Depressed 20-30% during daylight hours.

February 9 Depressed 20-30% 00-03UT.

February 10 Depressed 20% during daylight hours.

February 16 Spread F observed during local night.

February 21 Depressed 20% after local dawn.

February 22 Depressed 30% during daylight hours.

4.1 Comments on Ionospheric Conditions.

Propagation conditions up to February 24 were degraded.
Degraded communications were experienced Feb 5-16, and Feb 21-22.
The deepest depressions were observed on February 7th, 8th and 22nd.

2377. This Week in Amateur Radio First Anniversary Show

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-02 01:12:05 UTC
From: kxkvi@delphi.com
Message-ID: <xl4pnoV.kxkvi@delphi.com>
Source record: 270229

FOR IMMEDIATE RELEASE

Community Video Associates, Inc., has announced that "This Week in Amateur Radio" will celebrate its first anniversary on Saturday, March 5th. "This Week in Amateur Radio", the hobby's only satellite-delivered audio bulletin service, is carried on the Omega Radio Network each Saturday at 7:30 PM EST, on Galaxy III, transponder 17 (9H), 5.8 MHz wideband audio (4.040 GHz). Galaxy III is a Hughes HS 376 commercial communications satellite located in geosynchronous orbit at 93.5 degrees west longitude.

"This Week in Amateur Radio" is retransmitted "live" or by tape delay on HF amateur radio nets and VHF/UHF repeaters throughout North America. The program offers the latest news stories on technological advancement, national and international regulatory activites, operating news, ARRL, AMSAT, and RAC bulletins, and weekly features on contesting, YL activities, hamfests and conventions, DX, and satellite operation. Each weekly "newsmagazine" lasts 60 to 90 minutes and is suitable for retransmission on amateur frequencies.

"TWIAR"'s First Anniversary program will be about 120 minutes in length and feature live telephone call-in segments throughout the show. Calls will be taken at 518/877-7374. Affiliates that usually carry the program by tape delay are encouraged to "go live" for this special March 5th feature.

The program is produced in the Albany, New York area by Hudson Division Assistant Director Stephan Anderman, WA3RKB, and George Bowen, N2LQS. Weekly program summaries are circulated on amateur packet bulletin boards, FidoNet, GEnie, USenet, and Internet. For additional information or retransmission permission, contact WA3RKB at 518/877-7374, at P. O. Box 8592 - Albany, New York 12208-0592 or via amateur packet @ WA2UMX.#ENY.NY.USA.NA.

Too bad... I dealt with them about ten years ago, and they were tripping over themselves to give me excellent service. They spent a lot of time describing products to me, and then when I ordered the radio, decided I had enough fun (in a couple of weeks) and sent it back, they gave me my money back pronto. I liked them.

I'd expect this will come under the "vanity call sign" program ... if and
when it occurs ... and will require FCC 610V.

I doubt that they (the Government) will reissue old calls if they can be sold
thru the vanity program (sure don't like that name!!!).

Good luck. Hope you get it.

>I am looking for a way to make phone calls from my car through my own phone
>line, not a cellular service. I have heard a little about 'autopatches', but
>have some questions.
>
>1 - I this possible with half duplex on one frequency? if so, would the
> person on the other end have to dial some touch-tone to switch the base
> unit from receive to transmit, etc?

Yes it's possible, and no the party on the phone isn't permitted to turn around the link (in the amateur service). A licensed individual has to do that, and it's normally done by the mobile operator dropping his carrier. IE you unkey the mic and the patch begins transmitting the phone line audio. When you key again, the patch starts feeding your audio to the phone line. Hence *half* duplex.

Note a repeater can do this easily because it's listening on a different frequency than that on which it's transmitting. For a *simpatch*, which isn't a repeater, it's a bit more complex. The patch *samples* the frequency at short intervals (say 1/10th second every second) by dropping it's carrier and listening for yours. If it hears your carrier, it turns around, if not it goes back to transmitting phone audio. The short pops aren't too annoying.

>2 - Is there a charge for using ham repeaters.

Technically no. Amateurs aren't allowed to charge for the use of their stations. However, repeater owners have the right to limit access to their equipment, and one way they do that is to require operators to be members of their "club". There may be annual dues associated with the club.

>3 - Would my best bet be to try to get a ham lisence? My only reason would
> be for the phone service.

No. It's expressly forbidden for amateurs to use patches solely to avoid telco charges. If you want mobile phone, get a mobile phone. Patching is allowed in the amateur service only for experimental purposes, and for public service and emergency uses. They are not to be treated as alternatives to cellular, IMTS, or other common carrier systems. (Casual patches should be viewed as ways of *testing* the experimental or emergency system.) This is covered in Article 32 of the international regulations. (The FCC allows quite a bit more latitude for *domestic uses only* than what the international regulations require, but that doesn't mean there's a blank check to abuse the amateur system as a way of avoiding

using the public telecommunications systems.)

>4 - Could it be done with a CB? Would it be legal? What is the range?

I've heard simpatches being used on CB (Hell, I've heard all sorts of things on CB). I'm not sure whether such an interconnect is legal in the CB service. Part 95 doesn't say, but it may fall under the same common carrier restrictions as other telco bypass schemes. Simpatches are legal in certain *commercially* licensed services. That would be your best course if you *must* interconnect to the telco system via your home line. Otherwise, an IMTS or cellular phone is your best alternative.

In article <1994Feb28.212904.10734@arrl.org> zlau@arrl.org (Zack Lau (KH6CP)) writes:
>Seems to me that Gary wants to set up a digital network
>the hard way, with only people interested in digital
>networks.

Actually I'm trying to say we need to set up the network
the *right* way with people who will *keep* the network
operational as a service provider. That's a different
mentality than that normally found among DXers and
contesters. (Not that there aren't some from those groups
who *also* have the service mentality, just that it isn't
a normal part of DXing or contesting.)

>In the Northeast, winning the 10 GHz contest depends
>on *reliable* links. After all, there is the certainty
>of rain and the even the possibility of snow... Dale
>made his long haul contact and I didn't--with no
>effect on the who won. Even my longest contact
>was made over a path known to work well. This is
>why I haul stuff up hiking trails, rather than
>hoping for an opening....

In reading the articles on 10 GHz operating in the current
QST, one wouldn't get the impression of *reliable* links
with 50 db fade margins that work reliably 7x24 year after
year. *That's* the kind of links a digital network must
have.

>I wasn't saying that you should have contesters
>set up your links, much less maintain them. But,
>why not get some hands on experience if its
>available? People pay big $$ to get hands on
>training with the guidance of experts. I know
>in the Northeast there are groups willing to
>help out beginners, especially if they are willing
>to spend a weekend or two helping to make contacts.

I don't oppose people tapping into the contesting
domain for some experience and training on 10 GHz
equipment. But I must caution them that the sort
of training that they'll get isn't directly transferable
to setting up and maintaining *reliable* data trunks.
I got my own training and experience in the commercial
world setting up and maintaining intercity relay sites.
That's the sort of carefully engineered systems we have
to have for a national data network.

>Often, contesters just happen to have access to
>the equipment you say is unavailable.

Looking at the cummulative results table in QST, I'd
say that such equipment is spread mighty thin for a
national network.

>From what I've seen, HF contesters *do* have
>a suitable mindset for setting up a network.
>Perhaps not your idea of what a digital network

>competitors trying to wind DX contests).
>They even have a source of funding--sales of CT
>(one of the contest logging programs)
>support the network. True, the network doesn't
>support much more than DX spots and shortages
>on a contest weekend, but if it suits the
>needs of the people that spend their time building
>and maintaining it....

Ah yes, DX Packetcluster. "Hey George, the link's flaky."
"Well put up stacked beams and pile on the kilowatts,
to hell with the other digital users, the DX spots
have to get through." (I've actually heard exchanges
like that. The lack of cooperation between the Packetcluster
operators and the rest of the digital community is somewhat
legendary. It's that Type A DXer mentality.)

2386. IRS 501(c) tax-exempt status for our club - How?

Newsgroup: rec.radio.amateur.misc

From: "Scott W. Binder" <swbinder@delphi.com>
Message-ID: <x68qPgR.swbinder@delphi.com>
Source record: 270238

Hello - I was wondering if anyone was a member of a club that has Federal 501(c) tax-exempt status? We would like to know how to do so ourselves.

We are Humboldt Amateur Radio Club, Inc., and are a state non-profit organization. We have three chapters, each independantly governed and maintaining their own identity. We have been working with a local attorney who took our three page Constitution and By-Laws and turned it into twelve pages of legalese and left out many important parts, such as the identification of our chapters.

There has to be a relatively pain-free way to do this. Does anyone have any advice on how to proceed from here?

Thanks in Advance,
Scott W. Binder AB6TR
Secretary, H.A.R.C.

>(only) 3000 56 kbps nodes otherwise.

If you can show how to setup and *maintain* 7x24 megabaud+ links to all areas of the US, I'm all for it. I don't see a chance in hell of that happening so I'm trying to bring this discussion around to things that are within the realm of the *possible*. 56 kb beyond LOS links look possible to me, many thousands of 10 GHz megabaud+ LOS sites do not. It's not microwave *technology* that's the problem, it's the *sites* and the people to maintain them that are the problem. Amateurs don't have enough of either to establish a *national* microwave network, and little or no hope of getting them. (Local or regional megabaud+ links may be possible in certain areas, and I encourage that, but it just isn't going to happen nationwide unless we suddenly get 20 million new hams with optimum geographic dispersion.)

We're dealing with a very sparse matrix here. You don't seem to understand that as you sit in a dense metroplex with hams on nearly every block. The rest of the country just isn't like that. *Most* of our links are 60-80 miles long, over unfavorable terrain, to sites we can *get*. Nearly *none* of them are LOS. We *depend* on the beyond LOS propagation available most easily at lower frequencies to maintain those links. (If we could muster the power to do microwave forward scatter, that would be different, but there just aren't enough surplus TWTs out there to do the job, and site managers frown on 32 ft dishes on their towers. We *can't* depend on inversions and ducts, they just aren't reliable enough.)

This means "I'm tired of listening to you, windbag. I'm going somewhere
else." (On rare ocasions that somewhere else may be outside the car, but
not usually.)

>very good
>fine business

These are just null noises emitted instead of, or in addition to, "Uhhh"
and Ahhh" as space fillers for dead air. In some rare instances, they
may actually mean "OK" or "I heard you", but the ham couldn't bring himself
to use plain English. Their presence almost always means that no real
conversation is occurring.

It seems to me the FBI and FCC are trying to drive scanner manufacturers out of business by continually forcing them to redesign the circuitry. These laws aren't enforceable anyway unless you use the info in such a way that it can be proven you listened, which in itself is illegal.

|> with the available line length.
|>
|> AL N1AL

Not quite Al, you can get lower power HF slugs but they have severly restricted bandwidth, close coupling is required and the response suffers.

A good side of this is if you get a 1KW slug for VHF it often covers more than the frequency written on it. If you get a 1kW 200-500 MHz slug, it does a reasonable job on 144 MHz (you can always calibrate it against a known meter calibration on 144 MHz, and not too bad on 23 cms.

I have a 500W 50-125 MHz slug that is fine on 144 MHz. The error is less than I can measure against my genuine 250W 144 MHz slug.

I also use a 200-500 MHz 5W slug. It is fine on 432 MHz but also quite useful on 144 MHz. It is way out of calibration but it is still directional.

The onl HF slug I have is 500W 2-30 MHz. I think that is the lowest power available to cover the whole band

I'd like to thank all of you who took the time to send Ron, N3AKP a "get well" QSL card. He's scheduled to be released from the hospital today, and will be delighted to find all those cards waiting for him!

He'll be recovering for about 6 weeks at home, so you can still send him a QSL if you'd like to; his address is Ron Nord, N3AKP, 3621 Halls Creek Lane, Owings, MD 20736.

73, andy-k4adl

2397. Waveguide filters

Gary Coffman (gary@ke4zv.atl.ga.us) wrote:

: Ok, if you're co-located with a Class B or C FM station, you're going
: to have to deal with +50 dbW ERP signals, that's +80 dbm. Even if you get
: 70 db isolation, the signal at the diode is still +10 dbm. You've got
: to do a lot better than that. A waveguide beyond cutoff is most effective
: as a filter if it's length is 1/4-wave or greater at the frequency of
: the interfereing source. (Attenuation doesn't get much better once you
: pass the 1/4-wave depth.)

This description of microwave waveguide on VHF signals is *wrong*

According to Very High-Frequency Techniques by the
Staff of Radio Research Laboratory, Harvard University

The attenuation constant in dB/cm is

(8.686)*2*PI/lamdac*(1-(f/fc)^2)^0.5

where lamdac is is the cutoff wavelength and fc is the
cutoff frequency. Note that for frequencies well below
the cutoff frequency, the attenuation is essentially
constant. This gives a simplified equation,

loss=54.5*d/lamdac p. 10 1993 Microwave Update
Evanescent Mode Waveguide Filters by Reed Fisher

Thus, 1.2 inches of WR-90 gives 36 dB of attenuation.
100 dB of attenuation would require 3.25 inches of
waveguide. Additional attenuation would be expected
due to the poor coupling between the probe/diode in
the waveguide and VHF waves. A 10 GHz quarter wave
monopole isn't exactly a reasonable 100 MHz antenna.

If Ku band interference is a problem, no-tune 10 GHz
waveguide filters can be constructed using a drill
press, a 6 inch dial caliper, and a 100 watt soldering
iron. You can make a bandpass filter by putting in
posts down the center of the waveguide to break it up
into resonant sections. You can also solder sections
of waveguide to iris plates (plates with holes in them).

Making a filter for a 2M IF transverter is just
possible, while the tolerances are less critical for
wider filters. Alternately, it ought to be possible
to tune them up with a pair of ARR Gunnplexers,
using the relative signal strength meter.

WR-90 is surprisingly easy to work with, being about
the right dimensions for most people to work with.

6 GHz waveguide is too big and 24 GHz too small for
most people.

The big disadvantage is its weight--I wouldn't recommend
using WR-90 in a radio to be carried up a difficult hiking
trail. But, these spots without access roads usually
don't have big installations of radio transmitters, so
extreme filtering measures aren't needed.

|> month after receiving the returned unit.

This really isn't all that uncommon. Most businesses wait until they
receive notification from the bank that a deposit was made for $X.
They then process a credit memo for your credit card, which has to
be processed by the credit card company, so it can take upwards of
two months before a credit is realized. Not ideal, by any means,
but not uncommon or completely unacceptable either.

I purchased an AR-2500 from ACE, the only complaint I have is that I
asked for a schematic for modification purposes, and I received a
hand-drawn schematic which was very difficult, if not impossible in
places, to read.

The scanner itself, internally, seemed rather cheesy, but then again,
there really isn't alot to scanners, is there? The first question that
I, and other friends who saw the unit, asked ourselves was "is this
thing really *worth* $450?" Since I've never opened a Bearcat or
Uniden, I really have nothing to compare it to.

Overall, the unit works just fine, and I have no complaints with
performance. From that perspective, I would say that indeed, yes,
the unit is "worth" $450, since it performs as expected, and I was
willing to pay $450 for that level of performance.

Would I purchase another unit from ACE? I would have to say yes.
Would I purchase the same unit? Probably.

Ah! The joys of "Hamspeak" as my ex-wife called it. It seems radio amateurs are true masters of content free communication. Yes, I know the previous sentence contains an oxymoron.

Wheras real mortals will say: "Blew a fuse this morning". A true ham will spin it out with a desciption of what equipment was drawing current at the time, who was effected, the duration of the outage and the total milage driven to buy a new fuse. A skilled ham communicator can spin a simple event out so that the description of it takes three times longer than the duration of the actual event.

Around here, you can take all the writtens (on up to extra) without
taking a single code test. You are then issued a Cerificate of
Successful Completion of Examination (CSCE) for the written elements
that you have passed. I was told I had one year to then pass any
desired code tests. If, for example, I passed 13 WPM within the
one year period, but not the 20WPM (required for extra class), I would
then have to retake the EXTRA class written before again trying for
an extra class license.

This has been addressed by fax from the receiver to specific requestors.

> (2) I wonder how many quadrillions of dollars the Lagues *actually* makes
> of this particular publication?

Which would make the issue of monetary damages moot, especially since ARRL
has not previously defended their claimed (but untenable) claim of
copyright
against others who print maps, lists, etc.

>
> (3) Gathering and supplying the data is certainly part ofthe effort, but
> by no means all the effort that goes into compiling such a list and getting
> it published.

No, but it is a critical part, and some of the coordinators have (wisely)
placed restrictions of the dissemination of that data, which the ARRL seems

not to acknowledge either literally, in their publication, or in the
practice of inhibiting others who also have the same access to the facts.

> (4) Did you ever stop to think that there may even be some *other* reason

> basis? I can certainly think of some crazies who would gladly abuse ARRL

> publications fortheir own purposes, both to make money and to just make
> anuisance of themselves - we have a few examples who post to these
> newsgroups for example.

There is also the point that the ARRL may themselves be abusing the copyright process and harrassing other publishers. In fact, if a pattern were found,
the League could be charged with anti-trust violations and the membership could potentially be charged individually with conspiracy and tried under the RICO statutes. Heavy stuff - is it worth the bad PR to amateur radio in

general and the costs to ARRL in particular??

The real issue is whether a valid claim of copyright exists at all. The previous recent legal precedent says that there can be no valid copyright granted to ownership of the facts, merely the presentation of them (in the specific ARRL case, in PRINTED form). Therefore the presentation of a larger set of data, similar in form (and in a totally different media) is

not subject to copyright protection. Just because Encyclopaedia Brittanica copyrights their encylopaedia does not mean that they have sole ownership of the facts presented therein. They own _their_ _presentation_ only.

>
> (I'm not a lawyer so this is not a legal opinion :-)

Likewise, but experience tells me that if the phone companies with all their legal resources LOST the US District Curt case protecting their claimed copyright of the contents of a telephone directory, the League stands precious little chance of winning, much less recouping the legal costs from the sale of their version of a repeater directory.

What do you think, Gary and Mike? If someone should file charges based on the RICO aspect, does anyone win other than the lawyers? And will ARRL dues go up once again to pay for this folly?

> aren't reliable enough.)

At least you and I agree on the need for engineered, reliable links
and that construction of a network will take a great deal of
cooperation. I've emphasized that one of the few strengths amateur networking
may have is "ins" and access to local sites. All these are
points I've tried to make in some of my CNC contributions.

And in case you think I'm in a densely populated, ideal terrain out here,
think again. Mountains only work for you when you can get access and have
helpers to maintain them (as you suggest). I end up spending a lot of my time
with a 3 arc-second elevation database trying to figure out how to make
a well connected network out of sparse users and large obstacles. My few
links are (too) long just as you say yours are there.

My argument with your 56kbps approach is that it simply doesn't come close to being enough capacity. It isn't nearly adequate for the needs of a competetive nationwide amateur network. And, in addition,depending on non-LOS propagation while maintaining reliability is an even less optimum use of resources.

How do you intend to support even a fraction of the "20% of hams who call packet their primary mode" with even *mediocre* performance (never mind something competetive with telephone line modems which would stimulate and support growth), 50 dB fade margins etc?

You've presented some equations relative to non-quality paths, troposcatter etc, could you show us how a system like that can provide the required total information capacity and approximately what it might cost?

Could you present an estimation for us all of what the approximate vhf hardware and resulting per-user capacity of a reliable nationwide network of 3000 56 kbps full duplex nodes (your numbers) using beyond LOS propagation might be? Please show not only margins and hardware for an individual link but also an estimate of the spacial and frequency reuse problem/potential.

My estimates and opinion of the above indicate that it falls orders of magnitude short of providing service adequate to support itself in an amateur environment. I truly hope you can show me my error(s) and that a beyond-LOS vhf network is viable.

And here is the problem! Since R stayed the same and I is doubled, the I^2*R loss is FOUR times what it was previously. The transformer must now dissipate much more heat than it was designed for. Just put both transformers
in parallel (phased properly, of course) to get back to the full 15 amperes,
7.5 from each core.

> primary. Also, most transformers are rated for 100% duty factor.
> If you are using this to make a 12V power supply for a transmitter

> a bit more.

Nothing from the original questioner said anything about operating at a reduced duty cycle, but if you want to gamble at 25%, go ahead. Copper heats up rather quickly, and the steel core does not carry away the heat very well, so wear hot-mitts if you need to work on the chassis.

Yeah, I don't think we have any basic disagreement here. I gotta dig up some of the relevant case law, though! Anyhow, part of the problem _may_ well have to do with something Dan Senie, N1JEB, posted:

>>Read the opening pages of the repeater directory. The publication indicates
>>that certain data were obtained by other groups allowing the ARRL to use
>>copyrighted data wwith permission. It would seem that the League has agreed to
>>those groups being able to copyright their lists. I would guess that those
>>groups see it as worthwhile to have their data printed in the repeater
>>directory, and so allow for its use in the publication.

Could well be that part of the agreement by which the ARRL got to use the other folks' copyrighted material included a requirement to prevent unauthorized use by others. They _might_ just be doing something they _have_ to do.

If you do independently verify, or compile, the basic data (as by posting a request for _original_ repeater information here, and using that for the directory), and present it in a format different from the ARRL directory, I don't think you infringe their directory (caveat: I'm not a lawyer).

But if you have the same columns in the same order, with the same abbreviations and symbols, you're probably infringing their format, under US copyright law, even if your directory is on-line and not printed. How close you can come to somebody else's presentation of data and not infringe is the sort of thing that keeps lawyers driving Beemers.

Maybe we should wait and see if Conway has any success negotiating with the League. That might be something where ARRL members might have some influence: e-mail the league (or at least the guys listed in the directory recently posted) and your director, and urge them to grant permission to use data/format for an on-line directory.

Quite apart from the legal arguments that Gary points out, I think you will find that the amateur equipment ends up costing almost as much as a cellular phone, and is much more complicated to operate!

In part this is due to the fact that amateur equipment is much more flexible than a telephone and hence more complex.

This week on Spectrum we will scan the skies. Our guest will be our own
Gary Bourgois (The Birdwatcher). Gary is an expert on the world of
satellite tvro systems. Lots of folks enjoy his features on Spectrum,
but never before has he been live on the show to answer your satellite
and space related questions.
--
Spectrum airs live Sunday at 0300 UTC (2200 EST Saturday) on:

WWCR, 5810 KHz, Nashville, TN (World Wide)
WIFI, 1460 AM, Philadelphia, PA (Philadelphia Area)
KHNC, 1360 AM, Denver, CO (Denver Area)
Omega Radio Network, Galaxy III, X17, 5.8 MHz WIDE audio. (Satellite)

Spectrum is rebroadcast:

Sunday at 1500 EST, on WIFI, 1460 AM, Philadelphia, PA (Philadelphia Area)
Monday at 0400 UTC (2300 EST Sunday),
on WWCR, 7435 KHz, Nashville, TN (World Wide)

> alternative.
>

Actually Part 95 *does* address (and forbid) the use of any telephone interconnection to the phone lines for Class D stations. Check 95.420 (CB Rule 20) for details and specific wording. The sad part is that, as Gary mentions, almost anything goes on 27 MHz these days.

BTW, interconnect is also prohibited on GMRS (aka Class A CB) in section 95.141 with the exception of control circuits as detailed in 95.127. I vote

for the "real" car phone as the best choice.

Gary, keep up the good work of "Elmering via Usenet" and if they ever ask me for nominations for Chief of same, your name will be first up.

Actually, there are quite a few hams with pilot's licenses that would
love to have a radio that can do that. A typical aviation handheld
costs around $500 and they are becoming a very popular accessory as a
backup radio.

If anyone can confirm or deny this rumor please do so.

2413. 10 meter remote linking

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-02 17:26:37 UTC
From: kreblon@doc.cc.utexas.edu
Message-ID: <2l2i8d$aj9@doc.cc.utexas.edu>
Source record: 270265

Howdy!
Im the trustee of our 145.21 442.15 1294.0 29.66 repeater system
here at UT austin. Normally, I leave the 10 meter link on 29.66
virgin islands repeater, but the dual phase cancellation and remote
noise added up gets old.
Im looking for other repeater/remote operators who would like to leave
thier remotes on a simple frequency..say 29.480..so we could converse
when the band was open. Maybe start a trend...?
Any takers?

This appears to go back to military usage during WWII (maybe earlier, but _I_ wasn't around to verify that), and a radiotelephone signal-report scale that was 1 - 5 on both readability and strength. Thus "5 by 5" is a good as it gets.

Doesn't the Airman's Information Manual have something in it about signal reports. I seem to recall they encouraged plain-language reports, which make sense; using "5 by 5" from the tower sounds like a non-approved attempt at a personal "style." Most people understand it, but also understand "solid copy" or "loud and clear" at least as well.

I just remembered one of the key reasons why I abandoned the voice segment
of the HF bands so long ago..... Yes, it's all coming back to me now. :-)

I don't know how you feel about other modes (and of course, that choice is
strictly your own), but you might want to consider looking into some of the
other modes, such as cw, RTTY, AMTOR and PacTOR (my personal favorites
these days...cw is another, although I'm severely out of practice, and
would probably have problems even copying 20 wpm, much less 30, like I used
to), packet, etc.... I've never worked RTTY, but I'm guessing that it's
basically like AMTOR/PacTOR---basically free of the lids, and loaded with
lots of good folks.

You might also want to check out the WARC bands. I haven't been on any of
them except 30m, myself, but I'm told that they're all much cleaner (I'm
told that they're also frequented by lots of good folks, and I know this
was certainly true of 30m when I was basically living on 30m several years
ago).

The problem here, of course, is that the aviation handhelds are type
accepted for aviation use, and the TH-78A is not. It's against FCC
regulations to use the TH-78A to transmit in the aircraft band. If I
had one along in an airplane and there was an emergency requiring its
use, then I'd use it, but I wouldn't expect the FCC to be pleased.

Even better, any kid who goes down to the toy store and picks up one of those $10.00 pairs of walkie talkies can monitor cordless phone conversations. In fact, my son could not only hear but he could also talk on the cordless phone at my mother-in-law's the last time we were up there. It was a bit funny because he could only hear one side of the conversation and when he talked only one of the two could hear him (and I don't remember which was which) but it worked great. So, the FCC is now going to make it illegal to own a walkie talkie from "Toys R Us"?

Allen,

Properly modified, the th78 ca TUNE from 50mhz to 999.975mhz, with a
few gaps at 200 and 500. rx sensitivity varies but it is useable from
100mhz up.
One thing that the article didn ot address is the poor intermod
rejection of several of the reviewed units. Here in central CT
tyhe pager industry is booming and nmy rig is very (th78) sensitive
to it. Rumor has it that the standard is the best for imd rejection.

On the up side, the th78 has eexcellent features, easy to use, not
THAT hard to program, and the alpha-numeric display riulkes!!
that is RULes.... bad editor.....

the manual is about the worst of any i have seen, but until hewlett
packard starts making ht's, i do not see it getting better.

good luck

Sounds like a fun idea, but the frequency is not so hot. 29.3-29.5 is a satellite subband, used for downlinks from a number of low orbit satellites and I think 29.480 would put you in the upper part of RS12's downlink. I've had a number of satellite sessions trashed because of FM operators who didn't realise they were in the satellite band - unfortunately an FM signal takes out about 20Khz, which can be most of the transponders bandwidth, and will ruin a dozen CW and SSB qsos that the operator simply does not hear because of his limiter and because they are relatively weak signals. :-(

I don't have a frequency reference here to check for sure, but I'm fairly certain I have them correct. Perhaps 29.550 would be a nice round number instead. Actually 29.6 isn't a bad choice either - depending on how busy it gets.

If you do this, let me know as I and I'm sure some other operators locally would be interested in participating. A 10 meter link would be a nice widget to hang on our underused 440 repeater :-)

>further news from the league itself.

(I don't know why I am jumping into this morass, but...)

Conway Yee and I discussed this subject via email some weeks ago.

This current discussion seems to be based on conjecture
and speculation.

The ARRL is not the source of the repeater information.
The area coordinators are the sources of the compiled
information. Having seen the data that is sent to
the ARRL, I can confidently say that the effort
of Bart Jahnke at the ARRL is minimized, since the regional
coordinators must supply the data to the ARRL in
a format almost identical to that which appears
in the Repeater Directory. The ARRL simply appends
the data together and voila! a Repeater Directory.

Further, since I am now designing and implementing a computerized
information system for T-MARC (welcome to the 1980s!)
I am happy to report that T-MARC is implementing
an "ombudsman" to verify the accuracy of its own data.
The ombudsman will take the list of repeaters and
verify that each one is on the air. This is where
the "time and effort" come in, and it is a good thing
since frequencies are getting scarce in the Washington
Baltimore area.

So, if an on-line database is built from coordinators'
data, then it is the compilers of that database
who should be on the warpath, not the ARRL. (Ironic, isn't it?)
But, I thought that the whole idea of Conway's database
was that net.hams would supply the empirical data,
so it would be home-grown. Maybe I'm confused, too?

Also, computerization will make it easier to present
the data in useful ways, so that John Q. Ham can look
up repeaters by frequency, by location, or by callsign
to name a few.

I still think that accuracy is crucial, since inaccurate
data is worse than no data at all.

So, why are we still jabbering about this?
Don't say nothin, jes do it!

Actually, we never told Zack that Bird would indeed have sold us
a set. As best I remember, the cost for the custom element
as a few hundred dollars and the bandwidth was such that we
would have had to buy one for nearly each band. It just didn't
look like I wanted to pursue getting them for the ARRL Lab.

Bird was quite cooperative and helpful in answering our
inquiry.

: : The only HF slug I have is 500W 2-30 MHz. I think that

The 50-watt element covers from 2-30 MHz.

2427. The QRZ CD - it's great!

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-02 20:58:43 UTC
From: dbushong@wang.com
Message-ID: <CM229w.Iqo@wang.com>
Source record: 270129

I received my QRZ CD today and played with it a little. I'm posting this just to let everyone know that it's for real, and it works as advertised.

The callsign data is current as of about October, 1993. There is an ASCII file that contains all of the data (about 60 Meg) in case you want to write your own interface to access the data (e.g., a logging program, QSL card mailer, or something like that). There is also some source code which illustrates how you might do this.

I gladly concede the figure. Didn't have my "Morse" book around when I wrote it, so I was working from memory. The story as I remember it was that a couple of guys made it to 75, so they cranked the machine up (to 77.5? 80?) and nobody could copy solid. Then the judges looked at what had been copied and interpolated (!) a figure for the winner.

Why won't it stand much longer?

Big surprise. I've always read it this way; there's no mention of open vs closed coordination in Part 97; why shouldn't 97.205(e) mean exactly what it says?

However, I do not believe 97.205(e) is the basis for civil action to prevent someone from using a particular frequency. In other words, if I want to prevent my repeater from repeating certain stations, either by manual or automatic means, I have that right. But litigating for a civil injunction goes way beyond limiting the use of my equipment.

A horrible precendent.

Unfortunately the books I read when I was learning the code long ago seemed to imply that printing in caps was the way you wrote down your message, so that's what I learned, even to the point of forcing myself to learn to write my E's as a backwards 3 for speed. Now that I've decided to go for 20 I've broken down and started using cursive, and it's going very well. Also, my handwriting has never been better. I end up with a beautiful document at the end of each QSO!

COMPTON (Reuters) - Police psychologists today were extremely puzzled as to why a Compton man, identified as Jeffrey Angus, had stopped northbound traffic on the Santa Ana freeway by running along side cars only to stare at the crotches of male drivers and passengers. Witnesses stated he was yelling obscenities and clothed only in a black basket-weave print belt; a 2-way radio was said to be clipped to the belt (one ham radio operator who claimed to be a victim of Angus' staring said that the radio appeared to be on a frequency of 147.435 MHz - this could not be confirmed).

Just my curiousity about the fence: Are we talking about a real
electrified fence or is this what is commonly called an "invisible fence"
that send out a weak rf signal, received by a pet's collar to create a
shock when the pet tries to cross the "fence"?

I plan on travelling from Madison Wisconsin to Kalamazoo Michigan in a couple of weeks. My route is going to be I-90 to Chicago (via Rockford), and then I-94 to Kalamazoo (via Gary). Any speedtraps, 2m repeater, etc. that you can alert me to would be appreciated...

In addition, any info on Kalamazoo sights (romantic or otherwise) would be helpful.

Thanks in advance!!!

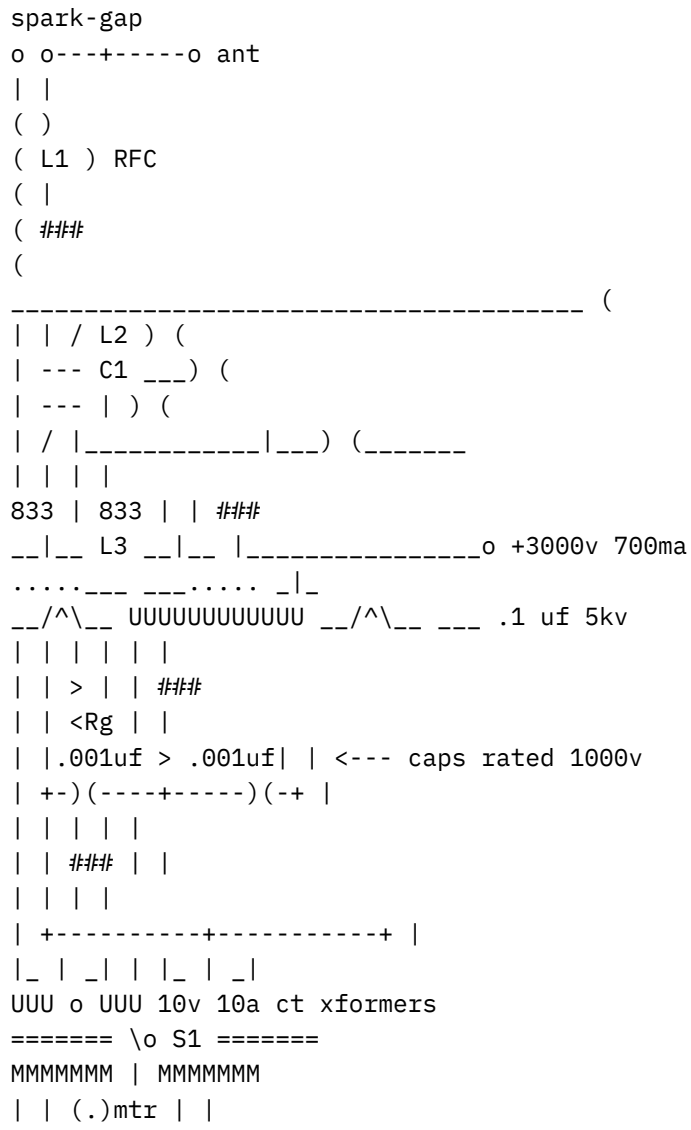
In article <rcrw90-010394101352@waters.corp.mot.com.corp.mot.com> rcrw90@email.mot.com (Mike Waters) writes:
>....
>BTW did you see the article about spark/arc transmitters in this month's
>QST? Not *that* would be fun to play with!
>

<BONG BONG BONG> MIKE WATERs OF CORP.MOT.COM YOU SAID THE MAGIC WORD: SPARK!
Your prize is the following Spark Gap Transmitter circuit, designed by
Randy, WA1UNW. {Remember, wear heavy rubber gloves when operating}:

TSB xmitter



```
o 117v o | o 117v o
>D F-24-a 's may be subbed for
| carbon mic 833's if supply's are made
### larger.
```

How it works:

The 2 tubes form a push pull power oscillator which makes alternating
current, but at a radio frequency.
This is done by use of L1 , L3, and the 2 little tubes.

In this case, the actual frequency is not important, sence the objective
is to generate maximum bandwidth...the goal of any 'phone station.
C1 is used to obtain maximum power by resonating L1 to L2's natural freq.

This RF voltage is stepped up by a factor of 30 to 100X by L2 and sent on
to the spark-gap, where the actual RF-to-be-sent is generated.

The RFC keeps the ant ckt at DC ground, yet will not short out the RF...which
is sent from the sparkgap, to the ant.

The ant wants to be one wire, and end fed. No coax required..just hook 'er
up and duck.

The length of the antenna determines the sending band it will be on.
The formula to use to get that length is...

Feet = (468/(((F*F) +730) -(F*F))) *35.5

F = frequency in Mhz (rounded off to nearest 100 Khz)

Voice modulation is done by use of a special Carbon Microphone, as used in
the 1920's...which can handle several amps.

Here, rather than sending RF thru the mic as was done back then, only DC
is sent thru.

That way, the operator (or inflictor) won't get an RF burn on his lips if
he speaks too close to the mic.

That modulates the power to the tubes , which varies the intensity of the
spark which then puts quite suitable a signal on the air.
The intellegibility will match the content of some of the QSO's now on the air.

To operate:

1 Place mouth near carbon microphone.
2 Close S1 and adjust C1 for dip in current (mtr) quickly.
3 Make oinking and Mooing noises to indicate your presence to everyone.
4 Open S1 when you get around to it.

****

Have fun, Mike (and don't tell the authorities where you got this from...)

Jeff NH6IL

Yowzer!..I had the same problem out at the radio ranch outside Austin.
Well, I was about to take direct action when the static stopped.
The reality is that after the dogs..or whatever..get zapped a few
times, they can turn off the fence cuz they won't go near it.
You might mention that in the same breath as mentioning the potential
health hazards to humans that this high voltage generator could have.
They can turn it on once a month to re-inforce the lesson..and save
electricity the rest of the month!

Glenn Elmore (glenne@sad.hp.com) wrote:
: How do you intend to support even a fraction of the "20% of hams who call
: packet their primary mode" with even *mediocre* performance (never mind
: something competetive with telephone line modems which would stimulate and
: support growth), 50 dB fade margins etc?

If 20% of hams are using packet as their primary mode when (for the
vast majority of them) the support consists of poorly engineered
1200-baud links and 300-baud HF links, doesn't it make sense that
at *least* that 20% would find 56-kbit/s useful? Understand, I'm
not arguing that faster speeds aren't desirable; they are. The
faster the better, within reasonable economic limits. But "fast
enough" is a relative term. It depends on the amount of data you
want to send and the response times you require. And it's like
hard disks: you'll fill a 20 Mbyte disk to capacity or a 500 Mbyte
disk to capacity, depending on which you have. Sure, you'd rather
have 500 Mbytes, but a heck of a lot of useful work gets done on
20 Mbyte disks. Sure, 56 kit/s isn't enough. Neither is
2 Mbit/s. Neither is 100 Mbit/s, because we can *always* fill it
up.

If you are going to insist that a 56-kbit/s network isn't useful,
what are the useage assumptions you are starting from? I bet I
can develop a (practical) set of usage assumptions that show
your proposed network to be unacceptably limited.

I'm not saying I don't agree that a higher speed network is desriable.
I'm just saying that the utility of the network vs. the speed
is purely a matter of degree, and rests on opinions about what
represents usable network capacity, not on hard data.

By the way... where can I buy my Hubmaster system? I *know* where
I can get the 56-kbaud hardware.

I'm going the oposite way; Tucson, AZ to Madison, WI.
East to TX then turn left if it's cold.
North to MT then turn right if it has thawed.

My experience is that in winter speed enforcement is a secondary
concern. As a general rule, the urban-rural 55-65 slowdown zones
and near state lines (after entering a state) are where troopers
are concentrated.

AAARRRRRGH!!!!

Now why, pray tell, would someone want to write down cw at hi speed?!??!?
Yeah, OK, write down call, QTH, signal report, blah blah for the log if
you must, but *why* do people insist on copying on paper?! Why why why?!
:) Head copy is:
1) Fast. No middle step. Just copy and go on and copy more!
2) Environmentally conscious! (Like I care, but anyway...) Yep, one less
tree to kill.
3. Natural! (Well, if you like cw anyway...) Sit back and enjoy it!
4) Convenient! No more hunting for a pen and paper to scribble on...

Head copy! Is it a lost ... h'mm. Well, do people head copy anymore?
Besides me, I mean?

Having a scanner with a 50 ohm input, I decided to try
a tv antenna (yagi) as a directional antenna. Small snag -
I got a 300 to 75 ohm transmormer, fed it to the 50
ohm input and it seemed to work reasonably well, but
I'd still like to get a better match. Does anyone know
where you can come up with a 300 ohm balanced to 50
ohm unbalanced (coax) transformer which would be good
up to about 1Ghz?

THANKS & 73's de WB5KXH

Well, even genius HP engineers blow it sometimes :=) I realized as soon
as I posted the above that I had answered a totally different question
than was asked, but was not able to kill the posting before it went out.
I was thinking of the case where you apply the 110 volts to HALF the
input winding, so the output voltage is the same, and the input current
is doubled.

I only had one email reply calling me on it. Come on, gang, is nobody
reading my postings? :=)

To answer the original question, it would work fine to run the transformer
at 1/2 the rated voltage. You would be able to get at least as much
output current (at 1/2 the voltage). The transformer would run nice and
cool, since it is only handling 1/2 the power.

Karl Beckman (CSLE87) wrote:
: There is also the point that the ARRL may themselves be abusing the
: copyright process and harrassing other publishers. In fact, if a pattern
: were found,
: the League could be charged with anti-trust violations and the membership
: could potentially be charged individually with conspiracy and tried under
: the RICO statutes. Heavy stuff - is it worth the bad PR to amateur radio in

Do you really think that League members could be tried under the RICO statutes? I hope this is hyperbole and not stupidity. Even in the most recent misuse of RICO, ie. Operation Rescue, I have heard of no member who didn't actively violate the rights of others by participating in blockades being prosecuted. The prosecution would, if anything, be against the League itself that is the purpose of incorporation.

: general and the costs to ARRL in particular??

The arguement about bad PR and such is a much better argument and I personally think there will be an on-line directory with or without the Leagues cooperation. But you can't expect them to not protect their copyrights to the best of their abilities.

: The real issue is whether a valid claim of copyright exists at all. The
: previous recent legal precedent says that there can be no valid copyright
: granted to ownership of the facts, merely the presentation of them (in
: the specific ARRL case, in PRINTED form). Therefore the presentation of
: a larger set of data, similar in form (and in a totally different media) is
: not subject to copyright protection. Just because Encyclopaedia Brittanica
: copyrights their encylopaedia does not mean that they have sole ownership
: of the facts presented therein. They own _their_ _presentation_ only.
Yeah sure, according to your interepretation I could just digitize the EB and make it available on CD and there isn't a damn thing they could do about it. If this still seems like an acceptable interpretation to you please explain how?

: > (I'm not a lawyer so this is not a legal opinion :-)

: Likewise, but experience tells me that if the phone companies with all
: their legal resources LOST the US District Curt case protecting their
: claimed copyright of the contents of a telephone directory, the League
: stands precious little chance of winning, much less recouping the legal
: costs from the sale of their version of a repeater directory.

One more time, the league is not saying you can't duplicate the work they have done in the directory, the facts are the facts. You cannot copy the

data directly off of their publication without permission.

: What do you think, Gary and Mike? If someone should file charges based on
: the RICO aspect, does anyone win other than the lawyers? And will ARRL
: dues go up once again to pay for this folly?

Gary thinks that RICO is a violation of basic civil rights and as such
should not be brought to bear against anybody because you could
prosecute under other existing laws based upon actions rather than
intent nad if we let the government (RICO is a criminal recourse) get
their foot in the door we could end up with Janet and the ATF in
Newington if we aren't careful.

Mike thinks that's just what the ARRL needs, to be torched by Janet et. al.

Note The preceeding paragraphs regarding Gary and Mike are in jest and
please infer smileys wherever applicable. If I won't speak for the U.
why would I speak for them?

cheers,
Dan (I hope Gary and Mike have a good sense of humor) Todd

2453. Anyone using JPS NIR 10?

Newsgroup: rec.radio.amateur.misc
Date: 1994-03-03 02:45:09 UTC
From: wier@merlin.etsu.edu
Message-ID: <wier-020394204509@198.213.12.252>
Source record: 270155

I have LOTs of ignition noise in the mobile while operating
on HF. Although I've been warned that DSP won't do much
towards knocking down impulse type noise, I've been using
a W9GR homebuilt unit and find that the improvement is
worthwhile.

About the only DSP unit which specifically mentions noise
reduction is the JPS NIR10 (which now had a Rev. 3.0
firmware upgrade). I'd be interested in opinions of
how well the current software works for noise reduction.

I know there was a QST review of the original unit in
(I think) Oct 91, but I don't have that issue here in
Texas (home qth is normally west of here).

Please e-mail or post here.

```
: While it is possible to do, my question is why? would you want to do it?
:
: After all, Ham radio is just that, Radio! Tieing it into hardlines in
: that matter seems to stray from the topic of the hobby. Pointing mainly
: at the matter of RADIO to RADIO digital communication. Thats the sport
: of things. THink about it.
: Just my opinion of course! :)
:
: R.Seacat KB7ZFU/AA
```

What about this situation: I'd like to keep in touch touch with non-amateur friends, who I usually use email for. (internet) but when I'm not at college (i.e. at home), I'd like to be able to get email. I just talked to the local sysadmin about this, and I'd essentially be forwarding my email (pre-screened by a program I'd have to write, of course, for length and content), to myself in Dallas. Sound feasible? It _is _ getting past the hardline, as I dont' always have access to the internet.
